SCRANTON FLORIST SUPPLY CO., Scranton, Pa.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more prolific than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent, more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I., say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England, also the largest rose and carnation growers in Rhode Island.

December 10, 1907.
Mr. J. H. Cushing, Quidnick, R. I.
Dear Sir: We have 1176 plants of your new seedling Victoria carnation which we planted in house the last of July. They

have made fine plants and we think now will produce as many flowers, if not more, than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1176 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market. Yours truly,

THE J. A. BUDLONG & SONS CO.
Price of Victoria rooted cuttings, \$75.00 per 1000; \$8.00 per 100; 250 at 1000 rate

REVIEW OF THE MARKET

NEW YORK.—Never since we became acquainted with the cut flower market in New York have we seen conditions so deplorable as they are at the present time. Supplies of all reasonable stock are coming in heavily; even roses are much more in evidence than they were a week ago, and from now on, no doubt, these flowers will get more plentiful every day. Carnations, probably, are suffering more than any other stock, simply because they are more abundant. So far as prices go, we can safely assert that there is no fixed market value on any flower reaching the city. The prices quoted in our table are merely asking prices, and they do not by any means imply that the stock coming into the market has realized the figures there mentioned. Thousands of carnations have accumulated in the hands of the dealers, and wherever opportunity offers, job lots are moved at prices that conform with the wishes of the speculator. Lilies and callas are both extremely plentiful, also tulips in single varieties of the various colors, and it is only for an occasional few of the double sorts that anything over \$1 per 100 is asked. Narcissus, in both white, yellow and Poeticus varieties, are offered at from \$1 down. Lily of the valley brings about the same price; the speculators seem to want the special at the same rate as the ordinary grade. Cattleyas have shortened up in supply somewhat, and it is just as well, as only very small lots can be moved.

Violets are extremely plentiful, and no fixed price obtains. When the weather is mild enough so that the street peddlers can get in a day's work, there are some clearances made at prices reaching as low as \$1.50 per 1000.

Taking the market all in all, it is in a very unsatisfactory state, and, with the near approach of Lent, those inclined to be pessimistic believe that we shall see no improvement for some time at least. It is to be hoped, however, that a material change for the better will take place in the near future.

CHICAGO. An overabundance of almost everything but rose characterizes the market this week, and business is very flat in consequence. American Beauty are even more scarce than last week, and at times bring a dollar over the maximum price quoted. White roses are not over plentiful, but pink are in good supply.

Carnations are almost at the glut point, excellent stock going at three cents. Large stocks of carnations are in the hands of wholesalers, and some sacrifices are being made. A cartload was sold on Tuesday by one house at sixty cents a hundred, and the sacrifice was scarcely inadvised. Bulbous stock moves very slowly, the bulk of transactions closing at minimum figures. Violets are not too plentiful, and good stock moves freely. Lilies are in fair supply and sell pretty well. Lily of the valley is very druggish, much more coming in than is taken. Sweet peas move well when the stems are long, but short stock hangs fire. Very little mignonette is arriving, and such as is offered is not taken very freely. A few stocks and wallflowers are to be seen, but the latter do not attract buyers. The local demand for flowers is very poor, and the shipping business does not appear to be quite so heavy as it was last week. J. H. P.

BOSTON.—Trade remains without any improvement over last week. Little is being done and many kinds of flowers are very plentiful. Roses still sell better than any other stock. American Beauty, Richmond and Killarney are the leaders, these command the high-class trade. Carnations are very plentiful and prices have fallen off from last week. Lilies sell rather slowly, callas are more in demand. Narcissus are very plentiful, as are tulips. Violets are not so scarce as they were. There is not such a demand for mignonette. Roman hyacinths are not quite so plentiful. With a little warmer weather it is hoped that there will be a brisker demand all around. J. W. D.

INDIANAPOLIS.—The trend of matters in the floral world is more toward normal in this section. Funeral work is quite up to the standard, but there is a shyness with counter customers which does not permit of the large individual sales of a year ago. Travelers among the trade are united in the opinion that the farther West the points considered, the less is the depression in florist circles.

The variety of flowers has been augmented of late by many varieties of bulbous stock; also shrubs, such as lilacs, which give much satisfaction. Carnations are undoubtedly the best selling flowers in the market at \$2 to \$4 per 100. Violets are meeting with better success at 50c. to \$1 per 100 wholesale, and \$1 to \$2 per 100 retail. Lily of the valley of fine quality does not always find buyers at \$3 to \$4 per 100. The cut of roses is not large; Bride and Bridesmaid, select stock, bring \$8 to \$10 per 100; Killarney and Richmond as high as \$14 per 100. American Beauty lag a little at \$5 to \$40 per 100. Flats of tulips, hyacinths and jonquills meet with favor, as do other well-grown, medium-priced plants. St. Valentine's Day is constantly gaining in the volume of business transacted. I. B.

ST. LOUIS.—The market this week was quite firm; cut flowers of all kinds sold well, especially white, and our commission men report that fairly good prices were obtainable on all grades. The retailers say that funeral work was very active, and some extra large designs were made up. Those in the West End report that they were busy with decorations for weddings, dinners, receptions and other social work. Roses of all kinds, except American Beauty, were scarce all week, and prices rather high. Carnations are rather plentiful in all colors, except white, prices running from 2c. to 1c. Violets, too, are in plenty, but sell well.

CARNATION PLANTS 2 1-2 in. Pots

Andrew Carnegie, Scarlet Harlowarden, \$15.00 per 100. Aristocrat, Welcome, Winsor, Beacon, White Enchantress \$8.00 per 100. Enchantress, Daybreak Lawson, Victory and Rose Pink Enchantress \$5.00 per 100.

Send for prices on rooted cuttings.

CHICAGO CARNATION CO., A. T. Pyfer, Mgr., Joliet, Ill.

at 35c. per 100. This week for St. Valentine's Day prices went up to 50c. All bulbous stock is in plenty at usual figures. Smilax and asparagus sell well. ST. PATRICK.
 CLEVELAND, O.—At present thousands of carnations are finding their way to the market, for fine stock prices run from \$2 to \$4 per 100. Tulips and daffodils move slowly at \$2 to \$3 per 100. Lily of the valley is rather scarce. Violets advanced in price a little for St. Valentine's Day. Roses are scarce at \$6 to \$12 per 100. Callas sell at \$1.50 per dozen. O. G.

CHANGES IN BUSINESS.

ANSONIA, CONN.—The Ansonia Floral Company has opened a store on Main street. Opening exercises were held January 23.

MANHASSET, N. Y.—The firm of Anderson & Webb has been dissolved, A. I. Anderson assuming all debts and obligations contracted by the concern.

WATERVILLE, ME.—The firm of Mitchell & Company has been incorporated, capital \$50,000. The officers are: President, G. A. Mitchell; treasurer, F. L. Mitchell; clerk, G. F. Terry.

PITTSBURGH, PA.—H. L. Blind & Brothers will open a new store on April 1, 1908, at 5424-8 Center avenue, East End, near Aiken. The South Side store will be vacated on the date mentioned.

NORTH TONAWANDA, N. Y.—The King Construction Company has been incorporated with a capital stock of \$100,000; incorporators, R. O. King, C. E. C. Hopworth, E. O. Spellman, North Tonawanda.

NEWBURGH, N. Y.—The Yness Gardens Company opened, on Saturday, February 15, a branch flower and seed store, which, until recently, was occupied by the Peattie Estate. Edwin Peattie will be in charge.

NEWARK, N. J.—The Satsuma Company has been incorporated to cultivate trees, shrubs and plants; capital, \$150,000. Incorporators: Marshall C. Leferts, Duff G. Maynard, Joseph R. Leferts, Henry C. Hubbard, Joseph W. Plume.

BANGOR, ME.—E. B. Hutchins has opened a store at 65 Hammond street under the firm name of the New Floral Company. Miss Lizzie Miller, formerly with Carl Beers in The Winter Garden and the Mt. Hope Floral Company, will be in charge as manager of the store.

Indianapolis.

News Items.

The Indianapolis Florists' Club held a meeting at H. W. Riemau's, on February 12.

George Wiegand has left for a two months' trip to California.

A. Schreiber and Robert Ellis, foremen for Bertermann Brothers Company, visited E. Dörner Sons & Company last week. The carnations are fine there according to report.

Herman Junge is having molds constructed for a new cement gutter, which he claims has a great advantage over all on the market and can be manufactured at much smaller cost.

Tomlinson Hall Market reports a fair business. All the high-grade stock for the week has been ordered in advance by the shop men. Much inferior stock is being disposed of with difficulty.

Visitor: Normal Miller, Martinsburg, W. Va.

Henry Dunderstadt is on the sick list. I. B.

Society Meeting.
At the meeting of the Massachusetts Horticultural Society on Saturday last there was a good attendance to hear Wm. Turner of Granite, N. J., talk on the "Growing of Vegetables under Glass." Mr. Turner gave a very practical talk from his long experience in this line, and there was considerable discussion.

President Westwood of the Gardeners and Florists' Club has appointed the following committees: Exhibits: George M. Anderson, chairman; James Wheeler, Wilfred Wheeler, A. H. Fewkes, F. J. Ken, Peter Fisher, William Westland, William Robb, Charles Sander, and J. W. Duncan, Refreshments: J. F. A. Guerin, chairman, George Butterworth, P. Turley, P. McManus, J. E. Barry and W. D. Nickerson.

Besides the prizes already announced for the exhibition of the Boston Co-operative Flower Growers' Association on the 29th inst., the following are offered: Silver cup, valued at \$25 by A. C. Zvolanek for collection of sweet peas, Zvolanek varieties; silver cup, valued at \$25, by James Wheeler for best new violet; F. R. Pierson Company offer two prizes, \$6 and \$4 for the best vase of 25 blooms of Winsor carnation.

On account of other use of Horticultural Hall next week the February meeting of the Gardeners and Florists' Club will be held the week following, the date being February 25. This will be a very important meeting; W. R. Pierson, Cromwell, Conn., will be the speaker and it will be a regular carnation night.

J. W. DUNCAN

DAYTON, O. Florist William G. Matthews last week distributed to the employees of this city 100 sacks of corn meal. His thoughtfulness and kindness are commendable.
The Florists' Club, which was to have held its regular monthly meeting Monday night, February 3, 1908, at Kieffer's Cafe, on Fourth street, postponed the event until the 1st of March, out of respect to J. B. Heiss, a prominent member who passed away a few days ago. At the next meeting the regular business will be taken up, and a banquet will afterward be held.

E. H. Kramer reports most excellent success with his Queen Beatrice rose which he is sending out this season.

A Cold Snap.

For a fortnight Washington has been in the grasp of wintry weather, which for low temperature has rarely been exceeded.

Business is below the seasonal average, owing partly to the recent financial panic, which swept the country, and partly to this being a long session of Congress.

The usual yearly excess of carnations is beginning, though not of a troublesome nature as yet; other stock is abundant.

Two large funerals occurred during the latter part of the week to which the society folk sent numbers of floral tributes. The most notable of these was the funeral of James A. Pinchot.

Chicago.

The Week's News.

Considerable preparation is making by retail florists for a good business on St. Valentine's Day. Violets are expected to be in good demand for the occasion, consequently same shortage in the receipts of locally grown stock was noticeable on Monday and Tuesday, growers evidently holding what they could for a good supply at the right time. Retailers' windows very generally carry signs as reminders of the approach of the feast of the "Love Saint," and orders for floral valentines are not wanting.

The Dodds Floral Company, located for a short time on Sixty-first street, has discontinued business.

H. O. Whitecomb, 326 Ogden avenue, who for the past three years has been located in different stores in his neighborhood, has discontinued business, and with his partner has gone into business in another field.

Winter's Seed Store is just now the scene of active preparations for the Spring trade, the store undergoing a rearrangement, and the fittings being augmented by the installation of a system of seed cases and stock cabinets.

August Jurgens has at his Herndon street greenhouses half a bench of well-flowered poinsettias in the pink of condition for cutting. His show of tulips

is just now very fine, La Reine in particular being long in stem and more than ordinarily rich in color. Proserpine and Yellow Prince are also of grand quality.

Charles W. McKellar is receiving every day some very fine double and single stocks. In orchids he reports a shortening in the supply of cattleyas.

Bassett & Washburn are making frequent shipments of their new scarlet carnation, Orlando P. Bassett, to Texas. A large consignment of this variety went South for the St. Valentine's Day trade.

Lincoln's Birthday created little or no extra demand for flowers. Retailers report very few decorations for the anniversary, few societies celebrating. Last year quite a little business was secured from this source.

George Reinberg is cutting a nice lot of phalaenopsis. Retailers who want something particularly fine for their windows could use this orchid to advantage.

The supply of white lilac at the A. L. Randall Company's store keeps up nicely and meets a healthy demand.

The committee of the Chicago Florists' Club having in charge the selection of quarters for the holding of the convention in Chicago of the American Rose Society, March next, at a meeting last Monday decided to secure an available hall in the Art Institute, on Michigan avenue, at Adams street. The location is quite central, on the lake front, near to all the prominent hotels, and an ideal one for the purposes of the convention.

The hall... 208 feet long, 60 feet wide, and 31 feet high, lighted from the top and sides, and unusually well adapted for an exhibition of flowers. The surroundings, which comprise works of art of all descriptions, will harmonize very pleasantly with the exhibition of roses, and the Chicago Florists' Club is to be congratulated upon having secured the privilege of holding the convention in such handsome quarters.

J. H. Pappas.

New York.

The Week's News.

The talk given by John T. Withers on the pruning and caring for shade trees before the New York Florists' Club on Monday evening was one of the most interesting we have ever listened to. Mr. Withers was, indeed, full of the subject, and the way he answered the many questions that were fired at him at the close of the lecture showed a remarkable familiarity with the trees, and was fully appreciated by everyone present.

Lincoln's Birthday was duly observed throughout the city on Wednesday as a general holiday, with the exception, of course, of the florist stores. No beneficial effects in a business way, however, were noticed, the trade done being similar to that of any other day.

St. Valentine's Day occurred on Friday, but so far as any special window displays or other efforts among retailers to take advantage of this day in securing special business, there seems to have been nothing doing, from which we would gather that this city is too swift to make a pause long enough to express any sentiment or sympathy with the ancient custom of sending valentines.

A very pretty wedding decoration was put up in Grace Church on Saturday last by Wernz & Koehn, florists, 61 Fifth avenue. The occasion was the marriage of Miss Green, daughter of General Green. The chancel and approaches were decorated with palms, Bridesmaid roses being used for the altar and reading desk.

John Young, wholesale florist at 51 West Twenty-eighth street, has been having his share of hard luck this week. While returning from a visit paid to his mother at Passaic, N. J., a few days ago, he slipped on the ice and fell, breaking two of the smaller bones in the wrist of his left arm, which necessitates wearing that member in a sling. On Tuesday morning one of his errand boys was sent to deliver a package of flowers e. o. d. around the corner from Twenty-eighth street. The amount, approximating \$20, was paid to the boy and he has not been heard from since.

Harry Van Koolbergen, representing the firm of Ottolander & Hoofman, nurserymen, Buskoop, Holland, arrived in New York Thursday, February 5, and will spend three months in the United States making a tour among the trade. Among other novelties Mr. Van Koolbergen is showing a colored plate of a blue hardy climbing rose, which his firm is introducing to the trade this year. This will be, indeed, a novelty—a blue rose of the Crimson Rambler type. He also has other new things in roses.

The new Fleischman baths, which occupy the entire three upper floors of the New Bryant Park Building at Forty-second street and Sixth avenue, were opened with fitting ceremony on Thursday afternoon, February 6. These baths are supposed to be the finest in the world and are intended by the promoter to bring about a virtual revival of the ancient custom which made bathing a fine art.

Ralph M. Ward, importer, 12 West Broadway, has been spending a few days at Tampa, Fla.

D. H. Hollingsworth, retail florist at 1146 118th DeKalb avenue, Brooklyn, has issued a very pretty calendar showing various views of New York City.

David McFarlane, who for many years has been superintendent on one of the private estates near Tarrytown, N. Y., has entered the commercial ranks as landscape gardener and practical horticulturist, with offices at 11 Fisher avenue, White Plains, N. Y.

The Palisades Nurseries, Sparkhill, N. Y., has been incorporated; capital, \$15,000. Incorporators: Angus McGillicuddy and John M. Stevens, Palisades, N. Y.; James Cochran, 49 Wall street, New York.

J. Edward Moon of the W. H. Moon Company, Morrisville, Pa., was a visitor this week.

 2 Duane Street, New York

Pittsburg.

Club News.
 The February meeting of the Pittsburg Florists' Club was one of the best held in some years; about 75 were present and quite a few more would have attended if they had known what was in store for them, for the proceedings were most interesting and the exhibition of flowers and plants was equal to anything we ever had. The meeting was held in the store room of the Pittsburg Cut Flower Company, Oliver avenue, as our regular place was entirely too small. One new member was elected and ten proposed for membership, giving a total of about 175 members—in all a very good showing. The committee of private gardeners handed in a schedule of plants and cut blooms to be exhibited at our monthly meetings during the year which will be acted upon at next meeting. These exhibits will be competitive and prizes and certificates of merit will be awarded.

Election of officers for the year resulted as follows: F. Burki, president; E. C. Reineman, vice-president; H. Blind, treasurer; H. P. Joslin, secretary; E. C. Ludwig, assistant secretary; Messrs. Randolph, Bader and Crall, executive committee. A vote of thanks was tendered to retiring President Jones for his untiring efforts the past two years as presiding officer. President Burki on taking the chair said that he alone could not make a success of the meetings, but he would do all in his power and hoped the members would assist him. Messrs. Crall, Wyland, Langhans, Garland and Burki spoke at the Carnation Society's convention in Washington; all were pleased with the exhibition and meeting. Some remarks were made as to the keeping qualities of some of the blooms, particularly some of the best seemed to be poor in that respect, and it was the opinion of those present that the medium sized flowers were best for commercial trade, keeping longer and giving better satisfaction to the purchasers. Mr. Wyland said that in his estimation Winona and Winsor were the best two pinks. Mr. Langhans spoke highly of Dr. Galloway's work, carried on by the Department of Agriculture. The boys were sorry that the convention was not carried for Pittsburg next year, and if they had known the vote would have been so close a few

more would have gone to Washington to vote.

Mr. Smith, who is a grower of carnations for A. Lorch at De Haven, gave his experience in fumigating with hydrocyanic acid gas, stating that it was the best method if properly used, taking less time, as once a month is sufficient to use it, other methods requiring three or four times a month. The gas kills absolutely all insects that are troublesome. He was asked about red spider, but he said that he is not bothered with this pest, so could not say whether the gas was effective as a remedy for it.

The executive committee was instructed to secure a new meeting place for the club as the present room is not large enough for meetings and exhibitions.

The next meeting in March, bulbous and other seasonable flowers and plants will be the subject and prizes will be awarded to commercial growers only. For the private gardeners prizes will be offered for the following: Six pots bulbous plants in variety; three plants other than bulbous and three Primula obconica.

The following were the exhibitors: J. L. Wyland, De Haven, showed Rose Pink Enchantress, White Perfection, Mrs. Lawson and Enchantress carnations. South View Floral Company staged Mrs. Lawson, Glendale, White Lawson, Lady Bountiful, Enchantress, Dorothy, Harlowarden and a light pink sport of Lawson. S. J. Hatch, De Haven, showed White Perfection, Enchantress and Rose Pink Enchantress. The Finleyville Floral Company, Finleyville, Pa., had Winsor, Rose Pink Enchantress, Aristocrat, Enchantress, Robert Craig, Beacon, White Perfection and Hannah Hobart. The Pittsburg Rose & Carnation Company exhibited Beacon, Mrs. Lawson, Winsor, Enchantress, White Perfection, Rose Pink Enchantress and Lady Bountiful. F. H. Westhoff, De Haven, Robert Craig, Aristocrat, Mrs. Lawson, Enchantress, White Perfection, Rose Pink Enchantress, John E. Haines, Bethlehem, Pa., showed John E. Haines, Pink Imperial and Imperial.

The private gardeners helped considerably to make the exhibition a success; the following gardeners were contributors: N. C. Madsen, gardener to Mr. R. H. Boggs, Sewickley, showed a bunch of cut carnations, and a fine lot of primula plants such as obconica, gigantea, anulus and floribunda, the plants were of the best grown ever seen in our city; Mr. Jenkinson, gardener to Mr. A. Peacock, had a bunch of cut carnations; H. S. Price, gardener to Mr. G. Laughlin, a plant of genista in full bloom and cyclamen plants which were much admired, being one mass of white bloom; Dr. Shafer's gardener, Mr. Hutchinson, showed some fine orchids in bloom.

The judges, W. Breitenstein and J. Murchie, Sharon, Pa., awarded prizes as follows: Dark pink Lawson carnation, A. Lorch, first, Aristocrat; F. Westhoff, second; light pink, Enchantress, Pittsburg Rose & Carnation Company, first; J. Wyland, second, White, F. Westhoff, first; S. J. Hatch, second; pink, Winsor, Pittsburg Rose & Carnation Company, first; Rose Pink Enchantress, J. Wyland, second, Red, Robert Craig, F. Westhoff, first; Beacon, Finleyville Floral Company, second. Private Gardeners—cut blooms, Mr. Jenkinson received first, \$7.50; and Mr. Madsen second, \$2.50. These two prizes were given by A. T. Boddington, New York. Certificate of merit was awarded to John E. Haines for carnations and cultural certificates were awarded to Mr. Price for his well-grown cyclamen and to Mr. Hutchinson for orchids. A vote of thanks was tendered to the judges, who had quite a job on their hands as all the exhibits were first-class. E. C. REINEMAN.

Heating.

Growers' Problems Solved by U. G. Scollay.

Please advise me how to heat a greenhouse (plan of which is sent herewith) with hot water, where to run the pipes, etc. You will see the heater is to be inside the greenhouse. Would you recommend putting it outside, or at either end? The specifications of the house are as follows: Main house to be 20x10 feet, three-quarter span, north wall 7 feet high, solid, south wall 5 feet (3 feet solid, 2 feet glass). Three doors, east end, north side, and connecting main house (for carnations) with small house (for violets) on west end. Ridge to be about 12 feet high and immediately over point 12 feet from south side. The violet house is to be 10x10 feet, with walk all around and one bed in middle; even span, walls to be about 1 feet high, half solid and half glass. Angle of roof about 35 degrees. Main house to have ventilators along south wall and along south side of ridge. Violet house to have ventilators in both walls and in ridge.

In planning, please figure to heat a propagating house 7x35 feet which is to be erected on north side in the future, North Carolina. R.

—Do not place the boiler inside the greenhouse; it is never a good practice, for there is always the liability of coal gas destroying the plants. Your house is so short, being only 10 feet, that I can see no reason why you cannot place the boiler in the northwest end outside, back of the violet house, and on this basis, I give you a lay-out: Put eleven runs of 2-inch pipe in the carnation house; distribute them four under the south bench, three under north, and under each of the two inner benches two pipes each. From the mains, which will run along the house at the west end, you will run these pipes, raising gradually, according to instructions heretofore published in The Florists' Exchange, toward the east, which will be the highest end in your case. Let both flow and return pipes in these underbenches be all side by side, placed either on wood strips under the bench or on brick piers. Place a 2-inch full opening gate valve on each of the flows of these four coils. In the violet house you will place a wall coil around the northwest and south sides of two pipes 2 inches; being sheltered by the boiler room on the north you will find this ample for your climate to maintain 45 degrees. You will require from the boiler in this range of houses 2 1/2-inch, flow and return mains, or if you desire simply to cut all one size 2-inch you can run a separate flow and return, 2-inch, from the boiler, to take care of four pipe coils on the south side and two pipe on the south inner bench. On the other 2-inch flow and return side you will take care of the north bench and north inner bench and also the violet house. This will make a very simple working job, and should give good results.

The expansion tank can be located in the room over the boiler, or at some convenient point as much above the pipes as possible. For the propagating house, you can leave tees on the flow and return of the main having the least pipe taken from them, and you can pipe this house with four 2-inch pipes. To take care of these houses economically, I advise a boiler of about 700 square feet capacity. It is well to have plenty of boiler, for under the great changes of climatic conditions you are very liable to have cold weather in your locality. U. G. SCOLLAY.

A peculiar incident happened to our hot water apparatus last week. On going to the end of the propagating house (which is heated separately from the other houses by a hot water system) we found the cover of the expansion tank knocked off, and plants within two feet practically boiled to death. Several explanations were offered, among which was that water had boiled over, and so damaged the plants. On further examination we found that the cover had been left on the tank, with the slide closed tight so that no steam could escape or expansion could take place. The temperature the night in question was near zero outside, consequently the boiler was kept going good. Is such a thing possible, that a miniature explosion took place under pressure of steam, which was held in check by the closed top of the tank until strong enough to have thrown off the top and released the water, which when free flow all over, and being hot, boiled everything it came in contact with? Or have you any other explanation to offer. S. E.

—The expansion tanks you refer to, from your sketch, would seem to show that they are of the old style cast iron cylindrical type. The cover you mention I assume is simply laid on the top of

THE WHILLDIN POTTERY COMPANY
THE LARGEST MANUFACTURERS OF
STANDARD FLOWER POTS

PHILADELPHIA, PA. LONG ISLAND CITY, N. Y. JERSEY CITY, N. J.

the tank loosely, and this top is fitted with a small ventilator or slide. From this you will see that the top has nothing to do with the matter of pressure, being placed there to keep things from falling into the tank and for ornamentation. If I am correct in this assumption, I must differ with you when you mention that no steam could escape or expansion take place, for it would take place with such a cover on or off. If your tank was absolutely a tight one under pressure, it would be a different matter. I assume that both of the tanks mentioned are on the same level, and the pipes of the same grade, and the explanation I offer is, that the tank would blow off the cover, being the most direct line from the boiler, and a trifle shorter run, would possibly accumulate the steam that the water formed in the boiler through hard firing on this cold night, and the water boiling over took the most direct course and so blew on the cover and threw the water around the house, which could all take place in a small fraction of time—even before the other tank could feel the result of the strain. I have seen the same thing happen before, and while you would think that both tanks would boil over, it does not always follow, for the reason explained above. If the relief had not come quickly through the shorter circulation, you would have found, through hard firing, that both the tanks would have boiled over, provided, of course, they were of the same height. If I am not correct in my description of the tanks in question, give me further particulars, also as to the levels and grades. U. G. SCOLLAY.

I would like to know your objections, if any, to piping a house for steam after the following manner: By running a line of 1 1/2-inch pipe along the purlin supports on each side of the house directly from the boilers to the opposite end of the house, about a foot or 18 in. from glass, then drop down and return toward the boiler through a sufficient number of 1 1/2-inch pipes, to heat the house. This seems to be the usual method of piping for hot water, and although I never saw a house piped for steam in this way, I don't see why it won't work.

It seems to me this method would heat the house more evenly all over than by having the steam go directly from the boiler under the benches, and the condensed steam return through a single pipe. S. E. S.

—The plan you suggest will work nicely provided the end bench coils are of sufficient height above the water line of the boiler to insure their being filled with steam and not water. If the run is very long, you must look into this question of the water line very thoroughly, for owing to the unequal pressure at a distance from the boiler on the main the absolute water line in the pipe will be higher than that shown in the gauge. The objection to putting the supply pipe in a steam job is that it would be too close to the glass, as that condenses very rapidly, and may have a tendency to give very little steam beyond vapor by the time you reach the far end unless you carry a good pressure. Of course, you will understand that the high point in the supply main will be nearest the boiler, allowing both condensation in this main and steam to flow the same way down from the far end of the house. The coils under the bench will then drop from the far end toward the boiler. In connecting up these coils I would advise valves being placed on each end of each of the 1 1/2-inch pipes, or at least every other pipe, so that the same can be controlled. U. G. SCOLLAY.

I have read in the heating column of The Florists' Exchange of the trouble the E. J. P. Company are having with their smoke stack, and I would like to make a suggestion. If they would start their flue at the floor of the pit, and leave an opening about one foot above the floor by leaving out one brick, so that some cold air from the cellar would draw through the stack, then have the flue from the boiler enter the stack on a rise from the boiler, by closing the damper to the boiler will create a draft from the bottom of the pit upward, and continual. This, I think will prevent dampness in the stack. CHAS. F. HILDEBRANDT, Brooklyn, N. Y.

The book of WATER GARDENING

By Peter Blisset. Price, postpaid, \$2.50
A. T. DELA MARE PIG. & PUB. CO., LTD
2 to 8 Duane Street, New York

Los Angeles, Cal.

The exceedingly mild Winter that has prevailed on this coast this season to date has been favorable for the production of strawberries, which are now abundant in our markets, and that, too, at comparatively low prices. They are offered in one-pound boxes, at 10c. per box, three boxes for 25c. The fruit is uniformly large, and of good color, but so destitute of strawberry flavor that if eaten with closed eyes, or by a blind person, the eater would never suspect that he was sampling strawberries. During the Summer months the fruits have a more pronounced flavor, but at no season of the year has this fruit, grown here, the rich, sparkling, sub-acid taste that characterizes it on the Atlantic Coast. Either soil or climate, perhaps both, has a tendency on this coast to subdue the acid in fruit and vegetables that are grown on both coasts. Tomatoes are not nearly so acid nor are Damson plums as sour as those grown in the East. The same may be truthfully said of rhubarb, although Victoria and all varieties of Rhenish palmarum are successfully grown only around San Francisco.

Several years ago Burbank conceived the idea of crossing these varieties on our native rhubarb, Rumex hymenosepalus, which grows wild in the hottest parts of this State. The result was what is known as Crimson Winter Rhubarb, and now this healthful vegetable may be had at a reasonable price anywhere on this coast. The stems are not half the size of those of the Victoria, yet it is rhubarb, but no wonder of The Florists' Exchange who can grow the large Victoria or Myatt's Linnaea, should allow himself to be misled by the amazing statements of disseminators of the feeble little Crimson Winter variety as compared to the giant sorts he has been growing.

For highly acid fruits we have the prolific pomegranate, Punica granatum, bouatis, Eriobotrya japonica, and guavas, Psidium Cattleianum, the only variety of this fruit tested here that is worthy of general cultivation. P. D. BARNHART.

Best and safest manure for florists and greenhouse use, absolutely pure, no waste, no danger. Write for circulars and prices.
The Pulverized Manure Co.,
34 Union Stock Yards, Chicago

WICHITA, KAN. Jacob Wingard, formerly in the florist business here, died on January 27, 1908, at the age of 51. He was a native of Indiana, and a pioneer member of the A. O. F. W. lodge in this city.

EAVE PLATE SENSE

If you don't want an eave like this photograph shows, buy our houses with steel angle plate and cast iron roof bar brackets, all galvanized.

SEE ILLUSTRATION IN OUR NEXT WEEK'S AD.

HITCHINGS & CO.
1170 BROADWAY, NEW YORK

Philadelphia. Trade and News Notes.

We cannot report any change in the cut flower business; even on Monday morning, which is usually good, salesmen reported trade dull. Large quantities of flowers are on hand which are not moving at all freely. Bulbous stock is now swelling the list, going at very low prices.

John Welsh Young is about again this week showing no ill effects from his illness with typhoid fever.

Stephen Mortenson, Southampton, Pa., will build a new house 43x265 feet this Spring. Lord & Burnham Company have the order for the material and Kroeschell Brothers Company of Chicago the order for the boiler; they will use their No. 14 boiler to heat this house.

H. Twynne of the King Construction Company and F. Lautenschlager of Kroeschell's were in town the past week. J. Liddon Pennock of the firm of Pennock Brothers is ill threatened with typhoid.

DAVID RUST.

Newport, R. I.

Death of W. J. Allan.

On Tuesday, February 4, William J. Allan died at Dr. Darrah's hospital, where he had gone two weeks previously to undergo an operation for appendicitis. The death of the young man (he was only 24) came so unexpectedly when his recovery seemed certain, that it was a grievous shock to his relatives and friends. "Willie" Allan, as he was familiarly known, was one of the most popular young men in this city, everybody body was his friend because he was friendly to everybody. He was the only son of William Allan, gardener for Dr. Jacobs and grandson of the late William Allan, for many years gardener on the Travers estate. It will be thus seen that the young man who has just passed away was in the third generation of Newport gardeners of the same family. He was an assistant to John T. Allan on the Drexel estate. Besides his father, mother and one sister, his wife survives, all of whom have the sympathy of all.

D. M.

Syracuse, N. Y.

News Items.

The weather has been the chief topic of conversation here the past week, and there is good excuse for it, too, as it has been a record-breaker and many of the florists find their profits have gone into the pockets of the coal men. The past week was the severest known for some years. Syracuse has the record of having the lowest temperature of any large city in the state—10, 18 and 22 degrees below zero has been registered almost every morning; very heavy gales too have been frequent, which adds materially to the coal bill.

McKinley Day is not much observed here and comparatively few carnations were sold; doubtless if the weather had been more favorable there would have been a fair sale for the flowers.

Harry Bellamy, L. E. Marquise's general foreman, is confined to his house with stomach and liver trouble; his many friends hope it will not prove serious, and that he will soon be out again.

I am pleased to say that D. A. Campbell, our most capable park superintendent,

has been reappointed. The parks under his management have been greatly improved and beautified. He has a very capable assistant in Walter Menzies, Jr.

Harry Smith, who has been the superintendent of the State Fair grounds for some years, has resigned. He has done much to improve the appearance of the grounds and has shown very good taste in the arrangement of his flower beds, which have called forth a great deal of favorable public comment.

St. Valentine's Day here is not much good to the florists. Trade remains about the same as my last report.

H. Y.

Baltimore.

The News.

The Farmers' League of Maryland met at the Johns Hopkins University during the past week; a strong and representative delegation from different sections of the State was present. Horticultural societies, the Gardeners Club, agricultural and fair associations, each had questions of importance to discuss. Closer affiliation and co-operation with the various county societies and kindred associations seems to be an accomplished fact.

President McCormick, with the members of the Board of the Baltimore County Fair and Agricultural Society, has invited the Maryland State Horticultural Society to hold an exhibition and Summer meeting in conjunction with their fair. The Fair Association is about to erect a large and commodious building for a larger fruit and flower exhibit.

C. L. S.

GRAND RAPIDS, MICH.—E. M. Strong, E. E. Taylor, Frank Cook and S. J. Perry have consolidated their hot-house interests under a corporate title of the Grand Rapids Greenhouse Company. Individually they control quite an expanse of greenhouses south of the city in which they have been generous producers of lettuce and other vegetables. The merger is for the purpose of reducing the cost and that the industry may be carried on to better advantage, especially as to the handling of the output. It is intended the work shall be carried on upon a more extensive scale and the program calls for additional greenhouses. To provide for these \$165,000 of preferred stock bearing 8 per cent. cumulative dividends is being marketed.

GLEN COVE, N. Y. The third annual dinner of the Nassau County Horticultural Society which was given at the Oriental Hotel, Glen Cove, on January 29, was a very enjoyable affair, about fifty members and guests being present. President Jaenicke occupied the chair and gave the members some good advice as to attending the meetings, reading essays and other matters of that kind, expressing the wish that the society would soon be in a position to have a home of its own. Among those taking part in the entertainment of the guests were D. McFarlane, W. E. Marshall, A. V. Kohler, John White, James Scott, W. Sperling, Jos. A. Manda, the Richards Brothers, Ex-President Mackenzie, Chas. Lenker, Robert Angus, S. J. Tress and James Cant.

President Jaenicke announced that the winners of the medals for the highest number of points received in competition

VOL. XXV. NO. 8

NEW YORK AND CHICAGO, FEBRUARY 22, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress

the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Duryen, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

The aggregate value of the seeds exported from the United States during the year 1907 was \$8,856,352 compared with \$11,259,421 during 1906. The imports of seeds in 1907 were valued at \$7,346,470 against \$5,563,019 in 1906.

During the year ended December 31, 1907, the value of the declared exports of seeds, plants, etc., from the consular district of London, Eng., to the United States was \$1,182,502.

SIENANDOHAI, IA.—J. W. Rakekin reports the demand for corn and other farm seeds far ahead of all previous records for this time of year.

FLORAL PARK, N. Y.—I. S. Hendrickson, manager of the wholesale department of John Lewis Childs, returned to his desk this week, after an absence of two months, caused through severe illness.

JERSEY CITY, N. J.—"To manufacture and sell certain nitrogen gathering organisms or bacteria for use in inoculating plants, seeds or soil" is the object of the Earp-Thomas Farmogerm Company, as stated in its articles of incorporation filed on February 11, 1908. The capital stock is \$180,000. Incorporators are John A. Graves, Edward J. Pierce, August H. Trimmel, John S. Gormley and Joseph W. Kennedy.

IMPORTS OF SEEDS, ETC.—February 10, J. S. Bullington & Company, 200 bags clover seed; J. M. Thorburn & Company, seven bags seed; A. Dickinson & Company, 200 bags clover seed; Ladenburg, Thalman & Company, 100 bushels clover seed; F. B. Vandegrift & Company, 11 packages plants; Amermann & Patterson, seven packages plants. February 11-12, McIntosh & Company, two cases bulbs.

FRANKFORT, KY. Pure field seeds and how to get them for the farmers of the State furnished the topic for a lively debate in the Senate on February 11. The debate was on the bill offered for Senator J. W. Newman, requiring only pure seeds to be sold and appropriating money for the carrying into effect of the law. The bill provides that the Kentucky Experiment Station, at Lexington, shall charge a fee of \$5 for making an examination of seeds and also says that the director and agents of the station shall have the right to inspect at any time the stock of seeds which may be carried by any dealer. Several objections were made to the bill, the principal one being that it takes money out of the State Treasury for the prosecution of offenders of a special character, and does not leave the law to be enforced in the regular way, as other penal statutes are enforced. Senators Campbell and Rives opposed the appropriations and thought the law could be enforced as well as any other law without a special appropriation. The amendment offered by Senator Campbell provided for the elimination of the appropriation, which the author of the bill said would kill it. Senator Rives offered amendments which left the bill general and simply made it unlawful to sell adulterated seeds and providing the penalty.

Seed Trade Notes.

The break in the steady cold weather that came this week gave every branch of the trade a quick increase of orders; it is always so at this season, but after Washington's Birthday is over those ups and downs of trade will pass, and the steady rush of seed buying for the season of 1908 will be upon us. The mail trade has again greatly increased, and will in a very few days be ahead of the most satisfactory volume of January. Counter business has shown quite a little spurt the past few days; we are not far away now from the rush. Wholesale orders have been larger than a year ago at this time, even in the face of the very high rates demanded for many standard seeds. Conditions on the whole continue very favorable.

The yearly "night-work" question is again looming up—it is the bane of the seedsman's life. Every year as the busy season approaches every effort is made to complete the advance preparations so fully that evening labor will not be necessary. All such plans are of no avail; and from now on until the season is over, night work to a more or less extent will be the rule with us all. And not only are many firms absolutely obliged to work their men at night, but in many cases Sundays as well; there seems to be no other way out of it in our business, where practically the bulk of the year's orders are received and filled within a dozen or so weeks.

All dealers who cater to and do a wholesale business are having much trouble in securing from their growers their supplies of sweet corn; small as the total volume of these supplies is, it does seem almost impossible this year to get the goods out of the hands of the growers. But do not blame the growers too severely; what they have endured this season in trying to get the sweet corn dry enough to handle they themselves only know.

IMPORTS OF SEEDS, ETC.—February 4. W. J. Bush & Company, 18 bags seed; W. Elliott & Sons, one bag seed; February 6. Vaughan's Seed Store, eight cases bulbs; H. Frank Darrow, five bags garden seed; Peter Henderson & Company, 50 bags grass seed; Maltus & Ware, one box seed; E. J. Hays seed; 13 cases plants; W. H. Stiner & Son, seven bags seed; J. M. Thorburn & Company, nine bags seed; February 7. Vaughan's Seed Store, one case seed; Maltus & Ware, two cases trees; February 8 and 9. S. D. Bidell, 200 bags clover seed; Vaughan's Seed Store, three packages seed; H. P. Darrow, 39 packages seed; Peter Henderson & Company, 20 bags seed; McHutchison & Company, 55 cases plants; February 10. Binghamton Seed Company, one case seed, one lashed seed; Maltus & Ware, three packages

seed; J. S. Buntington & Company, 200 bags clover seed; J. M. Thorburn & Company, seven packages seed; The Albert Dickinson Company, 260 bags clover seed; P. B. Vandegriff & Company, 11 packages plants; Ammermann & Patterson, seven packages plants; L. J. Spence, 61 packages plants; G. W. Sheldon & Company, 180 packages plants, etc.; Peter Henderson & Company, one case seed; Lazebere & Company, one case seed.

The wisdom of free seed distribution is a debatable subject in this country, and for it might be substituted the plan just inaugurated by the Canadian government, which has decided to spend nearly \$3,000,000 in seeds which will be for the use of needy farmers, the money, however, to be in a lien on the land at 5 per cent. interest. By such a method it is certain that only those deserving will obtain the help, a far better plan than the one in this country, where so much of the real intention of the scheme is wasted. Plymouth (Mass.) Memorial.

European Notes.

February has brought a more plentiful supply of sunshine than we have been blessed with of late and has infused a little hope into the minds of the growers of florists' flowers of the choicer types such as primulas and cyclamen. These are in full bloom just now and only waiting for a genial spell for the work of brushing to be started.

As regards primulas, up to the present no very startling novelty has appeared except a giant form of the old Chiswick Red and a very deep velvety crimson overlaid with maroon, much in the style of Comet but of a richer and deeper color. In the full light of the sun, or under a powerful electric lamp, it is an intense glowing scarlet, and despite the small size of the flower it is certain to be in great demand for decorative work. The new Orange King is well to the front, being one of the earliest varieties in commerce. A new form of P. strobilata named "Streathamii" has recently been exhibited; the leaf and stalk are quite a pale green and the flowers pure white. It appears, however, to lack the vigor of the original brown-stemmed varieties.

In cyclamen, the great improvement in the habit of the fringed section is the most noteworthy feature; the colors of some of the newer French varieties are extremely beautiful.

As regards the seed business generally, we are literally inundated with orders just now. The weather in the greater part of northern Europe is so mild and dry that the market growers have already sown their carrots, onions and parsnips, and propose to commence planting early potatoes next week. FLORISTS have a splendid opportunity of raising **Mushrooms** by utilizing the waste space under the benches, and then utilizing the waste material of expended mushroom beds in growing flowers. **Lambert's Pure Culture MUSHROOM SPAWN**, the best Mushroom Spawn in the market, is sold by all leading seedsmen. A fresh sample brick, enough for a small trial bed, together with large illustrated book on "Mushroom Culture," will be mailed postpaid upon receipt of 40c. in postage stamps. Address **American Spawn Company, St. Paul, Minn.**

favorable localities are busy sowing spinach, cross, onion, and radish, and look will follow in another ten days. As regards biennials we note that carrots have passed the Winter much better than last year, and that mangels have been severely punished by the January frosts. Parsley and parsnip are a good stand; brassicas do not please us.

ARCHIAS SEED STORE, Sedalia, Mo. Illustrated Catalogue of Field, Flower, and Vegetable Seeds, Bulbs, Fruit Trees and Plants, Supplies, etc. This well-known house was established February 14, 1884, and the present is the 25th annual catalogue it has issued.

JOS. A. SCHINDLER & COMPANY, New Orleans, La. Catalogue of Vegetable, Grass and Flower Seeds, Bulbs, Floral Designs, Supplies, etc. Adapted for the Southern trade. The catalogue is profusely illustrated and furnishes a handy reference table for the sowing of vegetable seeds.

WALTER P. STOKES, Philadelphia, Pa. Catalogue of Standard Seeds of Vegetables and Flowers, Farm and Grass Seeds, Implements, etc. Beautifully illustrated with half-tone reproductions from photographs, containing a select list of novelties and specialties, among which are Stokes' Bonny Best Early Tomato, which, in color, provides a very attractive front cover design; the new Cabbage "Nokor," several new things in Radishes, Peas, etc.

OTTOLANDER & HOOFMAN, Boshkoop, Holland. Catalogue of Rhododendrons, Roses, Clematis, Boxwood, Peonies, Hardy Plants and Shrubs. It gives an interesting list of novelties in Roses, including among others Otto von Bismarck, a cross between Mme. Caroline Testout and La France, the color of the flowers being that of the latter variety; Veilchenblau (Violet blue), the flowers of which are "steel blue," appearing in large clusters. This is a climbing variety, strong growing, with glossy green foliage, having but few thorns; also, Crown Princess Cecilie, new hybrid tea of delicate silvery rose color; Friedrichsrub, a cross between Princess de Bearn and Francis Dubreuil, the flowers being dark blood red.

Prices Advertised in these Columns are for THE TRADE ONLY—When Writing Please Mention THE FLORISTS' EXCHANGE.

DREER DAHLIAS

We can still furnish in strong undivided field-grown roots the following varieties of Dahlias. All of these are first-class sorts of their respective types and colors and strictly true to name.

Varieties specially suited for cut flower purposes are marked with an asterisk

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

SHIPMENT OF NURSERY STOCK, ETC., TO CANADA.

Within the Province of Ontario all nursery stock, except greenhouse plants, herbaceous perennials, herbaceous plants, conifers, bulbs and tubers, must be fumigated before shipment. Shipments into Canada must be addressed so as to enter Canada at one of the named ports of entry, where the stock will be unpacked and fumigated by the authorities. The fumigation seasons for the various stations are as follows: Vancouver, B. C., October 1 to May 1; Winnipeg, Man., March 15 to May 15, and October 7 to December 7; Windsor, Ont., March 15 to May 15, and September 26 to December 7; Niagara Falls, Ont., March 15 to May 15, and September 26 to December 7; St. Johns, Que., March 15 to May 15, and September 26 to December 7; St. John, N. B., March 15 to May 15, and October 7 to December 7. (Regulations, 1905.) Dr. James Fletcher, Dominion Entomologist, Central Experiment Farm, Ottawa, Canada.—National Nurseryman.

In the October, 1907, issue of the National Nurseryman will be found a most useful compendium of all the State laws governing the inspection and shipment of nursery stock.

Uses of the Snowberry.

It has often occurred to me that the common snowberry, *Symphoricarpos vulgaris*, would make an excellent plant for growing in pots and for selling at Christmas time. When growing in the open ground its berries are in good condition for some time after freezings set in, and where they are partly sheltered and the cold not too severe Christmas Day finds them in good order still, so far as concerns the berries, though the leaves may have fallen. If the plants were in pots and under cover from freezings the leaves would still be in good shape at Christmas, and a plant of this red snowberry in good condition at that time would be as pretty an ornament as many of the pot plants with berries now so much valued at that season.

This is the time to pot the plants. Any good nursery could supply them. Thrifty young plants are the best, those of a bushy nature. When potting them cut them down pretty close to the ground if too small for flowering the first year, but if of a size that a fair display of flowers may be looked for, the young shoots of the previous season must not be cut down very much, as the flowers and berries come on them. Potted carefully in Spring and assuming they have a supply of roots, they will carry a good lot of young shoots, enough so that a good showing of berries may be looked for; but, of course, well-established plants are more satisfactory.

The proper time to prune these snowberries is just after flowering, but only a few of the shoots must be cut away, as a goodly number of them must be left to produce the berries. As the nature of the shrub is to grow bushy there is usually an abundance of shoots for both purposes.

What has been said of the red snowberry applies with equal force to the white berried one, *S. racemosus*. But this much must be considered: being white berried instead of red, as the other is, it might not be valued as highly for Christmas, for we know it is red berries that all persons seem to go for for that occasion.

It may be mentioned here that for holding ground liable to wash away, for planting in any place where a clump is wanted or in partial shade along the edge of woods and similar positions, the snowberries, especially the red one, are exceedingly useful shrubs.

Mahonia Aquifolium.

At this season nurserymen will be planting the Mahonia or Berberis aquifolium, the evergreen berry now finding favor with florists for Christmas uses. When collected plants are in question they rarely do well unless well pruned when planted, for this plant makes but few roots, and some are bound

to be lost in digging. When not allowed to dry when collected and then pruned when planted the greater number of them will live, and in the course of two years will make nice plants for selling.

This evergreen shrub is a native of Oregon and Washington, where it is called "Oregon grape." It is now such a well known shrub and can be propagated from seeds so readily, that instead of getting collected plants many of our nurserymen import them, obtaining transplanted seedlings, which save time in the getting of nice saddle stock.

Plants from Oregon and Washington are not over hardy, even in Pennsylvania, and this mahonia does much better when in a sheltered place than when in an exposed one. On the approach of Winter it takes on a crimson bronze appearance, mixed with its natural green of Summer, and this, with its prickly crimped leaves, is what creates the call for it on the part of those looking for Christmas greens.

In early Spring it is crowned with clusters of yellow flowers which are followed by berries, both of which add to the value of the shrub in a decorative sense.

Variety in Native Oaks.

Horticulturists who came here from foreign countries always express surprise and pleasure when they view the great number of species of oaks that are native to our soil. No other country has nearly the same number that we have, and those of our nurserymen familiar with the raising of seedlings say

Bush Honeysuckle in Prospect Park, Brooklyn, N. Y.

that as many more species or varieties than we have recognized could well be made of what we have, for in every bed of seedlings there are always some differing from the type, which are quite unlike any named sorts. It is particularly noticeable in the oaks of the Southwest. There seems ample room for an investigation of these oaks by a competent botanist, and a separating of kinds into distinct types. Many are certainly hybrids or distinct species.

An error made by many nurserymen is in keeping to the propagating of a few old sorts of oak, instead of adding to the list some of the beautiful kinds not so well known. There is the *Quercus falcata*, for instance. A more beautiful oak does not exist, and its acorns can be had easily. Take, too, the *imbricaria*, the *castanea*, the *Micliauxii*, *obtusiloba* and *algra*, and why not grow these as well as those common ones of our woods—the *tinctoria*, *coccinea rubra*, *macrocarpa* and *palustris*? Nurserymen say they have no call for any others than what they grow. This is, no doubt, true, it is further true that they never will have if they do not grow these others. The greater number of their customers do not know of the existence of these oaks, believing that the three or four they are offered are all there are.

It seems a shame that many of the most beautiful of our native oaks are unobtainable in nurseries, and this, too, in the face of the fact that the acorns could easily be had in their proper season.

Is Yucca Aloifolia Hardy?

A correspondent, A. L. Hodgson, living near Pearson, Md., near the salt water, where pomegranates, figs, crepe myrtles, and like partly tender things north live outdoors, asks if the *Yucca aloifolia* and *Y. Trenculeana* should prove hardy with him. It is very likely they would. They are quite hardy at Raleigh, N. C., and the Berkman's Company at Augusta, Ga., had them so with them. *Yucca aloifolia* has lived out at Germantown, Philadelphia, in this way, that killing to the ground it sprouted afresh from its roots.

The correspondent referred to asks further if any one knows what the tree yuccas are that are growing about Norfolk, Va. They must be, probably, *gloriosa* or *aloifolia*, and as these are easily told apart by those acquainted with yuccas it may be some reader of *The Florists' Exchange* may know which it is. *Aloifolia* has much narrower leaves than *gloriosa*.

There are three caulescent yuccas hardy at Philadelphia—*gloriosa*, *recurvifolia*, and *glauca* or *angustifolia*. The latter is not generally looked on as in this class, but it is, as an examination of an old plant will show. Its little branches may be a foot or more above the ground, though hidden by the tuft of leaves.

Bush Honeysuckles.

Bush honeysuckles comprise a number of shrubs long known in collections and always in demand where shrubs are planted. They are known as *Lonicera*s, and are true honeysuckles, but lack the climbing habit of those of a vine nature.

The individual flowers of these bushes are not large, but they are very numerous, and backed as they are by pretty green foliage a large bush of any kind makes an exceedingly pretty picture when in full flower in early Spring.

The beauty of these bush honeysuckles does not end with their flowering. Berries form immediately, some becoming red when ripe, others of a light yellow, at which period the bushes are uncommonly attractive.

These bush honeysuckles are often used for massing, and they are then an ornamental group, but by far the best appearance follows their use when set singly. The berries are more likely to form in this case, and so many of them are ranged along the shoots as to weight down the branches. The berries' color very early in Summer, and are in good condition quite late in Autumn.

For the sake of its flowers, the *Lonicera tatarica grandiflora* would be preferred by many; their color is a deep pink. This one is also good for its berry display, and Morrow is in great favor for this purpose.

Two of these honeysuckles, the *fragrantissima* and *Standishii*, occupy a position half way between the climbers and the shrubs. They are of less bushy growth than some, yet are not vines. Their chief value is in their very early pale pink sweet-scented flowers. These flowers often are open before Winter has fairly left us, when in a suitable situation near a dwelling.

A Few Good Pears.

Florists as well as nurserymen are often asked to set out a few pears or to recommend a few for customers who have but a small garden. A half dozen sorts are enough when but a dozen or so are required. For an early pear, ripening in August, the Clapp's Favorite is very good. It is a juicy pear, a good sized fruit and one of good color. It has the fault of rotting at the core if kept many weeks. The best way to treat it is to gather the fruit the first or second week in August, set it away in a drawer for a week or ten days, then use it at once. Bartlett follows, ripening in early September or later farther north. In addition to these two the following are all good, and they ripen about in succession as listed: Howell, Seckel, Sheldon, Vermont Beauty, Anjou, Kieffer and Lawrence. Kieffer is included because it is much liked by some and everyone knows it as a reliable bearer, a good keeper and one well suited for preserving; and many assert it is not troubled with San José scale to the extent other sorts are.

JOSEPH MEEHAN.

THE FLORISTS' EXCHANGE

L. L. May & Co.'s New Warehouse.

The accompanying picture illustrates the seed warehouse recently erected by L. L. May & Company, St. Paul, on Conger Avenue, of that city. This is not only one of the largest warehouses of its kind in the United States, but also the most modern and completely equipped. It is thoroughly fireproof, built entirely on the "re-inforced concrete" plan. The floor area is 50,000 square feet. The trackage facilities for loading and unloading cars are excellent, the seed being conducted from the car direct to the bins by means of chutes. In cleaning and sorting the seed, the machinery used is the most modern. The seed is elevated to the third floor and from there dropped into the mills (which run by electricity generated by the firm's own plant), where it is cleaned and sorted, a large fan forcing the dust out through the roof. The seed drops to the cellar where it is bagged and stored. The capacity of these mills is 500 bags a day.

Three packet making machines, whose capacity is 150,000 packets a day, and three packet filling machines with an equal capacity, are kept working continually; these are run by electricity and operated by girls.

The firm does much of its own printing, for which three large presses are constantly in use. Also, in connection with the packet trade the concern makes its own tin cases; for this there is a complete tin shop, employing from 20 to 30 tin-smiths.

The first floor is given to the filling of bulk orders in the wholesale seed department, and to the large catalogue department. The second floor is devoted exclusively to the filling of packet orders. Packets in cases and cartons are conveyed down a chute to the shipping room where they are loaded on cars for shipment.

The basement is used for the storing of seed for the wholesale trade; and there are installed the engines, dynamos and heating plant. This heating plant forces the steam to heat the firm's greenhouses (buildings covering a block and containing 75,000 square feet of glass) through tunnels under two streets. The boilers are equipped with "Murphy stokers" which give great satisfaction in doing away with the smoke nuisance, as well as in proving fuel savers of a good order.

This building was commenced in July and completed in December of last year. About a block distant from it are the greenhouses where are grown the flowers for the retail trade, and thirty men are kept busy at this all the year round. There are 25 houses and these are crowded with all manner of plants. Each house is equipped with an automatic clock that registers the amount of heat in the house and the temperature at all hours, thereby regulating the temperature

and insuring correctness. All growing is done along scientific lines and only experienced specialists in their several branches are employed. Thousands of small plants are shipped annually from here to all parts of the world, and the cut flowers are sent fresh every morning to the store at 64 E. Sixth street, where seeds are sold at retail as well as flowers. A most interesting feature is

here under cover, thus enabling this firm to get out its Spring deliveries early in the season. This depot is used for storing the nursery stock during the winter.

A mile and a half from Lakeland are the Mayfield nurseries and seed farms. These embrace about 300 acres under cultivation and are used to grow the nursery stock sold by this firm. The experimental grounds on these nurseries are very interesting. All new varieties of fruits, shrubbery, ornamental trees, etc., are thoroughly tested as to hardiness, proficiency, and general qualities before being propagated and offered for sale.

The warehouses and cellars here are used for the storing of fruit grafts, cuttings of ornamental trees and shrubbery, and small fruits for planting in the early Spring, as well as potatoes and roots.

Some idea as to the fertilizing required for the successful growing of nursery stock may be gleaned from the fact that 40 carloads of manure have been spread over these farms during the past winter. From 150 to 200 men are employed continually during the Spring and Summer, as constant cultivation is necessary to keep the land in first-class condition. A complete system of water works, pipes laid to all quarters of the nurseries, supplied by an 800 barrel tank, irrigates the grounds. Thus it is possible to have in blossom fields of hydrangeas and gladioli, acres of raspberry bushes bearing luscious fruit, red, white and black; apple trees and all kinds of fruit trees are tested by the rigorous Minnesota Winters, these nurseries being the farthest north of any in America.

The general offices from which this huge business is conducted are situated on the second floor of the retail store building at 64 E. Sixth street. All departments, as wholesale seed, grass seed, greenhouse, catalogue and nursery, are in charge of competent heads, and a landscape gardener is employed by the nursery department to furnish plans for the laying out of parks and private estates. In all, the office force employs from thirty to forty clerks.

A more comprehensive idea of the magnitude of this business can be obtained

L. L. May.

the store conservatory, a glass-covered area 60 feet square. It is filled with palms, ferns and all tropical plants and a large fountain in the midst adds its music to that of the Hariz Mountain canaries, giving a pleasant illusion of Spring as one steps into it, out of a Minnesota blizzard.

In addition to the large wholesale seed and catalogue business, the greenhouses and the retail store, L. L. May & Company have an extensive nursery business which is operated at Lakeland, Minn. Here there is a nursery warehouse covering 10,000 square feet of ground. It is thoroughly frostproof, has its own trackage and is so large that wagons may be driven inside to be unloaded. In fact, all the packing is done

from the fact that 1,000 persons are employed in all its several branches, including traveling men, clerks, nurserymen, growers, etc., and its buildings alone cover 250,000 square feet. It was founded 26 years ago by its present owner, L. L. May, and for the space of time this firm has been in existence, it has built up one of the largest businesses, combining horticulture, agriculture, and floriculture, in the United States, which speaks volumes for the fertility and resources of the North Star State. For a better understanding of the business methods of this firm, one should have a catalogue, 200,000 of which are issued annually and sent free of charge to anyone sending their name and address to L. L. May & Company, St. Paul, Minn.

Pittsburg.

The Week's News. The high rivers the past week do hurt trade to some extent and did the usual damage to places in the low district. W. L. Beckert's store on the north side had water on the floor of the store room, but everything was moved to the upper floors, so the damage is not so great.

FOR SALE

METROPOLITAN MATERIAL CO. Greenhouse Wreckers

FOR SALE 8000 ENCHANTRESS from soil strong healthy plants shifted twice. These cuttings were all selected for my own use but have decided to put in A. L. THORNE, FLUSHING, L. I.

The secretary of the Florists' Mail Association drifted with the storm on Wednesday last into the editorial sanctum and announced that he had just adjusted the first loss of the season, that of the Pioneer Cut Flower Company, Springfield, Mo.

TOMATO SEED BAGS Colored Vegetable. LARGE STOCK ALL VARIETIES Rush orders shipped day received. HIRNDON, EESLER & IVEY CO. RICHMOND, VA.

Nickolas All, a well-known pottery manufacturer of the South Side, died last week, aged 81 years. He was a member of the firm of Foell & All, who made most of the flower pots used in our vicinity many years ago in the first and only pottery of any consequence. He retired about 16 years ago and his son Louis carried on the business for a few years but has since abandoned it.

Dan, Maillie, the North Side market florist, is a candidate for the State Legislature, and being a good politician on the right side will have no difficulty in being elected.

Breitenstein & Flamm expect to move from their present place in Spring; their store, corner of Liberty and Market streets, has been a florist's stand for over twenty years. Another old stand has disappeared, that of L. I. Neff, on Sixth street, formerly Elliott's old place. E. C. REINEMAN.

Dayton, O. The Florists' Club at its recent meeting adopted the following resolutions on the death of J. B. Heiss: "There is a Reaper whose name is Death. And with his sickle keen He reaps the bearded grains at a breath. And the flowers that grow between."

The passing of Joseph B. Heiss brought sorrow to all who knew him. His personal qualities were such as made him loved by all who knew him for what he was. His long residence in Dayton was devoted to the doing of his part in the building up of the city. Realizing in a measure what a great loss his sudden taking away means to the community, we desire to offer our tribute of respect. The poor words at our command are inadequate to express our sorrow. Let the following resolutions, adopted at a recent meeting of the Florists' Club, serve as they may to show our love and respect: Be It Resolved, That in the death of Joseph Heiss, our first president, the Dayton Florists' Club loses a faithful member, a strong friend. We mourn his loss deeply. None knew him but to value his friendship and all can scarcely realize that he will meet with us no more on earth. His place in our hearts is sure. Be it further, Resolved, That these expressions be made a part of our records. Also, that a copy be sent to Mrs. Heiss, whose sorrow is our own.

H. H. Ritter, Secretary, J. G. Bartholomew, Chairman, John Boehner.

NEW "MY MARYLAND" ROSE

Best up-to-date commercial rose. Read what others have to say about it:

THE GARDENERS AND FLORISTS' CLUB OF BOSTON

A Report of Merit is Hereby Awarded to JOHN COOK, For Vase New H. T. Rose No. 294, since named "My Maryland."

Description and points of particular merit: This new Rose has a pleasing shade of Salmon-Pink, with other essential characteristics of a good commercial Rose fully proven. Much may be expected of it.

The Committee believes this Variety will be especially valuable in the light pink class of Winter blooming roses.

Given by the Gardeners and Florists' Club of Boston, this 17th day of December, 1907.

Signed.

Price 2 and 2 1/2 in. pots, \$25.00 per 100; \$200.00 per 1000; 3 in. pots, \$5.00 per dozen.

JOHN COOK, 318 N. Charles Street, BALTIMORE, MD.

QUESTION BOX

Leaf for Name. A READER.

New York. —Ficus pandurata.

(36) Crates for Shipping Cut Gladiolus.—Can you tell me the best way to make crates for shipping cut gladiolus spikes? I want to ship a quantity next season. E. T. B. Indiana.

—Will some reader kindly oblige?

(37) Marguerite Carnations as Cut Flowers.—Is the Marguerite carnation good for cut flowers grown out of doors, and if so, can good varieties be perpetuated by cuttings? L. L. C. New York.

—The Marguerite carnation is very pretty for garden purposes, but for cut flowers it cannot be compared with American carnations, so what would be the use of cultivating the Marguerite for that purpose?

(38) Cuttings of Begonia Vernon Rotting.—Can you inform me as to the cause of Begonia Vernon cuttings rotting in the cutting bench; only about 10 per cent. of them root. C. F. D. New York.

—The most likely cause of the begonia cuttings damping off in the sand is from their being kept too wet. After the first watering, when the cuttings are placed, great care should be taken that the foliage is not wetted too often. With enough bottom heat to dry out the sand daily, and avoiding watering late in the afternoon so that the foliage will not be wet over night, there should be no trouble in rooting these begonias.

(39) Trouble with Gardenias.—What is the cause of gardenia leaf tips turning yellow, withering and dying off? New York. N. P.

—There are so many causes for gardenias turning yellow and otherwise behaving badly that it is impossible for us to tell the cause of the trouble in the present instance without knowing more details as to the treatment the plants have been under. We may say, in a general way, however, that being planted in too deep soil, having poor drainage, being over-watered a few times, temperature going too low at night or an attack of red spider will, any of them, cause the foliage to turn yellow and check the progress of the plants.

(40) Browallia, Swainsona and Cyperus. Is Browallia speciosa major an annual or a perennial? I find catalogues at variance in regard to this. I wish to plant seeds of this plant if it is a perennial; otherwise not.

I think I have read that seeds of swainsona are slow to germinate. About how long do they take to sprout? Would soaking in warm or hot water hasten the process?

Is fresh seed of Cyperus alternifolius slow to germinate? What length of time does it require? How long does it take to fill a 2 1/2 or 3-inch pot with roots? Fla. A. J. B.

—The browallias are half-hardy annuals. Sown in Summer they make nice flowering plants for the following Winter.

Seeds of swainsona are rather slow to germinate, but soaking them in warm water twenty-four hours will aid germination materially.

A. N. PIERSON, CROMWELL, CONN.

62 Vesey Street, New York. Telephone, 7313 Cortlandt. Correspondence Solicited. Surplus Stock Converted.

Cyperus alternifolius is so easily increased by division that growing it from seed is rarely resorted to. We have never tried to grow it from seed, so cannot tell just how slow it is in germinating. If one has a few old plants, 2 1/2 or 3-inch pot stock could be had in a few weeks by dividing the old roots to single crowns, potting them and placing them where a good bottom heat is maintained. This would bring far quicker results than can be accomplished by raising them from seed.

COLEUS

Verschaffeltii. Standard Crimson. Golden Queen. Standard Yellow. Fire Brand. Bright Maroon. Lord Palmerston. Dark Maroon. Queen Victoria. Cardinal Red, with distinct golden border. Beckwith's Gem. Center Velvety Maroon, bordered with red, the edge green, changing to creamy yellow at point of leaf.

Arthur T. Boddington SEEDSMAN 342 W. 14th St., NEW YORK CITY

Uncommon Winter-Blooming Plants.

It is sometimes necessary for the florist and gardener to enter to a class of people who desire something out of the ordinary run of commercial plants, and the following notes may be of some benefit to all such:

DAEDALACANTHUS NERVOSUS, when well grown, is quite an attractive plant for the warm greenhouse; the flowers, although not large, are borne profusely, and are of a beautiful soft blue color, and at this season of the year there is very little of this color. It belongs to the order Acanthaceae, and although most of the genera of this order are somewhat difficult to cultivate the subject under consideration is very easy to handle. It should be propagated annually from soft cuttings in Spring, and given good soil, plenty of sunshine and water; it makes quite a good-sized plant by the end of the year. We grow quite a large batch of this annually, and it is always admired; it starts to flower about the first of the year and continues in bloom for a month or so.

REINWARDIA TRIGYNA is a shrubby plant of considerable merit for conservatory decoration. The flowers, which are of a fine yellow color, are produced about Christmas and the plant continues to bloom until well into the New Year. The greatest difficulty in the culture of this plant is the obtaining of the cuttings. Some of the plants should be cut back. The young shoots which result make the best stock for propagating; ripened shoots do not make good cuttings, as they do not branch enough, and will usually flower prematurely. This plant when in flower is rather fugacious, but if grown in a temperature of 45 to 50 degrees the flowers will be found to last much longer. It belongs to the Linnæan order, although when in flower I have often seen people admiring it and mistaking it for an anemone; and at first sight it does resemble some of the evening primroses.

CENTROFOGON LUCYANA.—Where odd plants are required, to make the greenhouses interesting, this is indeed a good subject. It belongs to the Campanula order, and is easily cultivated. It should be propagated annually, and grown on in ordinary good soil. The flowers, which are borne in panicles at the points of the shoots and along the shoot at the axil of each leaf, are both curious and showy, the color being a bright rose. It can without any difficulty be in perfect flower for Christmas, if grown in a temperature of about 60 degrees.

PLUMBAGO ROSEA COCCINEA is an old plant and well deserves more general cultivation. The flowers are of a beautiful rose color, and when the plants are well grown are produced on long racemes three to four feet in length. It is easily propagated from cuttings. After flowering the plants should be slightly cut back, frequently syringed, and the young shoots which break away will root easily. The plants may also be carried over for two or three years if properly taken care of. By propagating at different times a longer season of flowering may be had; young plants rooted late last Summer are now in full bloom, the racemes on the young plants being, of course, smaller than the older plants, yet none the less valuable from the brilliant color of the flowers. It delights in a good free soil and plenty of moisture, and a temperature of about 60 degrees. To any one requiring a showy plant for the greenhouse I can recommend this as a most valuable subject. We have had it in flower here since early in November, and it is not past yet. Where a general collection of plants are grown, this plumbago interspersed through them liven the collection wonderfully.

THRYSACTHUS SCHOMBURGIANUS is an old favorite but seldom seen nowadays, yet its merits are of some value. It is of the easiest culture and should be propagated annually, as the old plants get leggy and unsightly. This plant has a peculiar habit of flowering, the inflorescence being a long pendulous graceful spray. The flowers are red, and tubular in shape. It is well suited for a hanging plant, and is best grown in pots, but should be hung up when the sprays begin to develop. Under good cultivation these sprays will attain a length of from three to four feet. The plant starts to flower about February, and continues in bloom until April. Although grown usually as a stove plant in England, it requires no special treatment, and thrives well in a temperature of 55 to 60 degrees. W. H. WAITE.

DREER'S Reliable FLOWER SEEDS

SWEET PEAS For cutting. The kinds which find the readiest sale are those like the following, which have bright, clear, dented colors. For complete list see our current Wholesale Catalogue.

Orchid-Flowered Varieties

This type has very large waxy flowers, usually four blossoms on long, stiff stems, and are as easy to grow as the standard sorts.

Countess Spencer (true), a lovely clear pink	Oz	1 lb.	1 lb.
Frank Dolby, largest pale lavender	.50	1.75

THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, No-
vember 9 to 15, 1908. William F. Kasting, Buffalo,
N. Y., is chairman of the show committee.

An endeavor is making to secure a special premium
to be known as the "Guarantors' Sweepstake Prize" to
be awarded to the exhibitor receiving the largest num-
ber of points, which will be reckoned somewhat as fol-
lows: Cup, vase or other trophy, 10 points; gold medal,
10 points; silver medal, 5; bronze medal, 3; first-class
certificate, 2; award of merit, 1; money prize for each
dollar one-tenth of a point. Each guarantor is asked to
subscribe toward this premium from \$1 up, and not more
than \$10. Those interested should address W. A.
Manda, South Orange, N. J.

PUBLICATIONS RECEIVED.

LANDSCAPE GARDENING FOR AMATEURS.—By P. B.
Wagner. Published by the Wagner Park Conservatories,
Sidney, O. Paper. Price \$1.

This is a very useful book. It is 8x10 inches, well
printed, and contains 64 pages of beautiful illustrations
and the necessary information for laying out home
grounds in an attractive and artistic way. It also treats
on the laying out and planting of school and college
grounds, factory, sanitarium and hotel surroundings.
The publication will be found an excellent guide and
book of reference to those interested in beautiful home
grounds.

The same firm also publishes one hundred detailed
plans of lawns and gardens with planting keys—a most
serviceable and instructive pamphlet.

TO AMEND SHERMAN LAW.—Mr. Hughes (Dem., of
New Jersey), on February 17, introduced in Congress
the following proposed amendment to the Sherman anti-
trust law: "This act shall not be construed to apply
to any arrangements, agreements or combinations be-
tween laborers made with the view of lessening the
number of hours of labor, or increasing their wages; nor
to any arrangements, agreements or combinations among
persons engaged in horticulture or agriculture made with
the view of enhancing the price of agricultural or horti-
cultural products."

The Alleged Settlement of the Hydrangea Question.

In its issue of February 15, 1908, our Boston contem-
porary publishes a communication from Professor C. S.
Sargent of the Arnold Arboretum in which that learned
gentleman states that the variety *sterilis* of *Hydrangea*
arborescens, described by Torrey and Gray in their
Flora of North America, is "not the plant which has
been cultivated and described by Mr. Hill, for his plant
is a form of *Hydrangea arborescens* var. *cordata*, with
neutral flowers an inch across and broadly ovate and
acute sepals." He also states that Alfred Rehder, in a
German publication, "has proposed the name of *Hy-*
drangea arborescens f. *grandiflora*, *forma nova*, for
Mr. Hill's plant and this is the name by which it should
be known." The following explanation is given as au-
thority for the adoption of the Rehder designation: "As
Mr. Hill, in using two varietal names for the same plant,
did not follow the recognized rules of botanical nomen-
clature, Mr. Rehder, who next described the plant, being
at liberty to select either of the two varietal names pre-
viously applied to it, very properly took *grandiflora* as
being the more descriptive of the two."

It will be observed that Professor Sargent does not
enter very fully into the description of Mr. Hill's *hydra-*

it should be known," by determining whether or not the
plant is *nova*, either to botany or commerce. This can
be done most satisfactorily and conclusively when the
plants are in flower next Summer.

In the meantime we would respectfully refer the "ex-
registrar" and Mr. Hill to the report of the Nomencla-
ture Committee in the 1891 proceedings of the S. A. F.
particularly to pages 86 and 92.

The letter of the learned gentleman to which we have
referred demonstrates most clearly to our mind the
limitations of the practical florist when he tackles the
(to him) practically unfamiliar question of botanical
nomenclature; it also proves conclusively the incom-
petence of the S. A. F. O. H. and its official charged
with the registration matters of the organization to
correct the practical florist when he ignores recognized
botanical nomenclature usage. The professor's letter
also strengthens our contention that all questions of this
kind should first be submitted to competent authorities
to be passed upon before the S. A. F. O. H. records
something which neither its registration official nor the
average plantsman knows very much about. Or, better
still, that, as we have previously suggested, the matter
of all plant registration in this country, be placed in
the hands of the Bureau of Plant Industry at Wash-
ington, D. C.

Furthermore, Professor Sargent's communication fully
corroborates the assertion of our Boston contemporary
that there are "dangers" in "a little learning"—something
that has been evidenced very decidedly in this endeavor
to give a botanical name to this hydrangea by one of the
introducers who clearly went beyond his depth, the
"registrar" being also helpless to assist him. The "hind-
sight" critics will have done the society, its registrar, and
the trade generally an excellent service, if their criti-
cisms do nothing more than remove the "dangers" of
the plant nomenclature conditions that have existed too
long for the general good. Our Boston friend has cer-
tainly no grounds either for his congratulatory or trium-
phant vindication hurrah, as nothing definite, justifying
this registration, has yet been established, and we very
much doubt if it ever will be.

BOOKS RECEIVED.

FLOWER GROUPING IN ENGLISH, SCOTCH AND IRISH
GARDENS.—Notes and 56 sketches in color by Marg-
aret Waterfield. Publishers, J. M. Dent & Company,
London, England; and E. P. Dutton & Company, New
York. Price 86 net.

In this interesting and charmingly written book, in
the descriptive portion of which the authoress has been
assisted by several well-known old country writers on
garden subjects, Miss Waterfield has depicted the flora
of Great Britain and Ireland as arranged in some of the
most prominent private and public gardens, with an eye
to pictorial effect. She informs her readers that the
subjects illustrated have all conveyed to her some lesson
of beauty and usefulness, and "as the pictures are of
results achieved in one part or other of the British Isles,
I hope they may be useful to other gardeners and stimu-
late the planting of still more beautiful effects." The
flowers have been treated not as single specimens, but
in relation to their setting of house or wall, lawn or
woodland, or as a foreground to the landscape, planned
for the beauty of the whole effect.

Some of the subjects discussed are: "Notes on a
Sheltered Garden" in Ireland; "Some Characteristics of
Scotch Gardens;" "The Annual in Scotland," by that
well-known author, R. P. Brotherton; "Cornish Gar-
dens," by S. Wyndham Fitzherbert; followed by chap-
ters on "Early Spring Bulbs," "Spring Blossoms,"
such as the almond, peach, magnolia and cherry;
"Summer Flowers," "Creepers," "Water Gardens,"
"Wild Garden Notes," etc. The illustrations are all in
color, are beautifully executed, and constitute an attrac-
tive feature of the volume. They depict scenes in gar-
dens that, some of them at least, are well known to
men now resident in this country whose early gardening
days were spent among the surroundings pictured.

As regards flower gardening in Scotland, F. Graham
Stirling, who contributes an interesting article on the
subject, says "the present is a transition period, and
in Scotland things have not yet righted themselves. But,
on the whole, the old order is changing very rapidly.
Greater taste is evident in the substitution of delicate
color groups, in place of the vivid ribbon border. Roses
are more used, either by themselves or grouped with
herbaceous plants. Borders, which once contained only
calceolarias and lobelias set out in stiff lines, have been
revolutionized by planting a background of white and
pink sweet peas, and dividing the space into alternate
divisions of China roses and free growing carnations.
Sometimes plants of distinct colors are grouped to show
each other off; and sometimes a whole border is given
up to one color. The following tribute is paid by Mr.
Stirling to the Scottish gardener:

"No article on national gardens would be complete
without a tribute to the shrewd intelligence and skill
of the Scotch gardener, whose worth is acknowledged
all over the world, and that not only in the present day,
but from the earliest History of Horticulture."

A delightful chapter on "Cornish Gardens" is fur-
nished by Mr. Fitzherbert. Cornwall must, indeed, be

Hydrangea arborescens var. *sterilis*
(Hills of Snow)

Under the name "Hills of Snow" the plant from
which this flower truss was taken, was purchased from
a catalogue offer. The photograph was made in June,
1901.

He does not state that the plant in question is a new
one; although Mr. Rehder, in his description, adds the
term, *forma nova*. It would be interesting to know
whether Mr. Rehder speaks from his own knowledge of
the variety, or simply has accepted the Hill registration
as guaranteeing newness (which registration with the
S. A. F. O. H. implies) and has merely put Mr. Hill
right in the matter of correct botanical nomenclature.

It is quite evident from information in our possession
that the hydrangea in question has been known for many
years, although it may not have been in general garden
cultivation, yet it has been cultivated in gardens,
under one or more local designations. Mr. Hill him-
self has stated that the plant he has registered as *H.*
arborescens alba *grandiflora* was growing for "years and
years under the very noses" of J. W. McNary and E. Y.
Teas. It does, therefore, seem strange that this "hand-
some sterile form of *Hydrangea arborescens*," as Pro-
fessor Sargent designates it, being in evidence for all
these years, should have escaped the attention of botan-
ists and botanical writers in this country and elsewhere,
and should have, for so long, gone without recognition,
identification or previous description. These are some
of the matters connected with this discussion which we
should like to see cleared up satisfactorily.

We have no desire to question the learned profes-
sor's botanical diagnosis, but we do question the right of
the S. A. F. O. H. to register the name given the *hy-*
drangea by Mr. Hill until after the society has fully es-
tablished, through its own botanical authority, the use of
that name, or the one Mr. Rehder has given the plant,
which Professor Sargent submits "is the name by which

the most favored garden spot in all the British Isles, judging from the large number of rare and tender shrubs and climbers that grow in the gardens of that country in the open air, and the majority of which are to be seen elsewhere in England only under glass protection. Plants native of South Africa, Australia, New Zealand, the Pacific Islands, Burmah, the Himalayas, Chili and other South American countries may be seen in Cornwall growing in the open in the best of health.

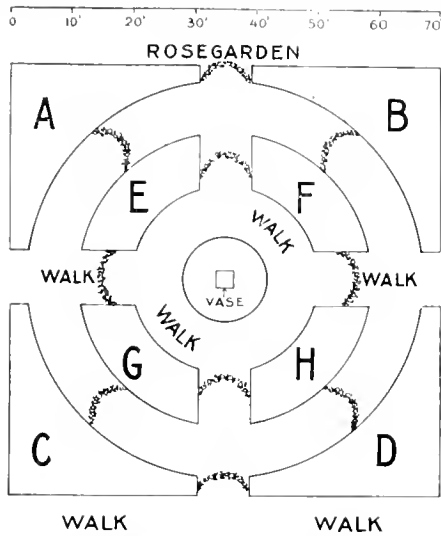

While the conditions that confront the American gardener are different from those of his English brother, yet many valuable suggestions as to planting, etc., may be gleaned by gardeners in this country from the text of the volume before us, which is admirably printed and illustrated.

Plan for a Rose Garden.

Editor Florists' Exchange:

A. E. Wohlert should erect arbors connecting the rose beds as indicated on the accompanying plan.

Arbors are best made from 4-inch pipe. In order to do this it is not necessary to use right and left threads; only make an extra long thread on one end of the pipe, and turn up as far as it will go; then back thread into the other fitting. Ordinary poultry netting placed over an arbor of this construction and painted green makes a neat and substantial arbor.

Leave pipe enough to go 1 foot 6 inches into the ground and place a little concrete around them.

Plant bed A with Frau Karl Druschki edged with Baby Rambler; bed B with Mrs. John Laing edged with Baby Rambler; bed C with Magna Charta edged with Baby Rambler; bed D, with Ulrich Brunner edged with Baby Rambler; bed E with Grass an Teplitz; bed F with Pink Maman Cochet; Bed G with Killarney; bed H with White Maman Cochet. The vase, I think, had better be dispensed with in the center bed and a plant of Crimson Rambler trained to a stake 10 feet high, the rest of the bed planted with Baby Rambler.

Cover arbors 1 and 5 and 3 and 7 with Crimson Rambler; 2, 6, 4 and 8 with Dorothy Perkins; 9, 10, 11 and 12 with Lady Gay. By having grass paths great care would have to be taken to admit enough light at the top of the arbors. Instead of a hedge a fence 8 feet high covered with Rambler roses would make a very effective show. However, the surroundings would have to be taken into consideration, as many an otherwise beautiful landscape scene could be spoiled with such a glare of formal work.

DAVID MACFARLANE.

Tarrytown, N. Y.

Editor Florists' Exchange:

In answer to A. E. Wohlert's inquiry as to how to plant his rose garden, I would suggest the following:

A. B. C. D. I would plant in hybrid remontants using not less than eight plants of one variety, planting them 2 to 2½ feet apart. This would take about 100 plants or twelve times eight, 12 varieties to a bed. A few standards could be evenly divided over those four beds, say, a dozen for each, making 48 for the entire garden.

As a border for those four main beds I would use the Midget rose (Rosa multiflora nana), which is so easily raised from seed and blooms the first year.

E. F. G. H. I would arrange as sunken beds; that is, have them one foot below grade of grass walk, and would plant them with hybrid teas, either one or two varieties to each bed, but not more, in

order to get the mass effect of one color. The vase I suppose to be on a pedestal of which I would have somewhat elevated, and the central small bed at its base I would plant with polyantha roses.

I would arrange a grass walk around the whole of the garden as indicated on the dotted boundary lines. Along these boundary lines I would have a neat looking wire fence, the posts 8 to 10 feet apart and five wires eight inches apart, and the panels between every two posts I would plant with climbing roses in as many varieties as there are panels. Over each of the four entrances I would build an arch to be grown over by a vigorous climber.

On the outside of the whole garden, if space is available, I would arrange border plantings in irregular outlines for which I would use the rugosas, sweetbriars, Wichuriana and wild roses. As to varieties, climatic conditions must be considered, but there is enough hardy rose material available to make a success of such a small garden as far north as anything in the way of hardy shrubs can be grown, not even excluding hybrid teas.

Minneapolis, Minn. THEODORE WIRTH.

Editor Florists' Exchange:

Subjoined I give a list of roses such as I consider would make a good arrangement and look well for the rose garden plan shown in your issue of February 1, 1907: JOHN L. CHAPMAN, Mass.

Center Bed—Grass an Teplitz with border of Clothilde Soupert.

Bed G and F—Center line Maman Cochet, white; line either side, Maman Cochet, pink; Mme. Jules Grobez, Pink Rambler, Amy Muller.

Bed E and H—Center line Viscountess Folkestone; line either side, Killarney, Souv. du President Carnot; Mme. Caroline Testout.

Bed A and D—Center of bed Frau Karl Druschki; around that Kaiserin Augusta Victoria; edging of Richmond and Liberty.

Bed C—Whole bed, Dorothy Perkins.

Bed B—Whole bed, Crimson Rambler.

Hill on the Hydrangea Matter.

Editor Florists' Exchange:

We hope that our objecting friends, including the Editor, may now resume their ways untroubled by the problems involved in securing a correct and scientific nomenclature in the family of hydrangeas. Now that Professor Sargent has kindly settled once for all this specially vexing question—and we return him our sincere thanks—the allies may take comfort in the fact that "alba" has been dropped (and you could hear the dull thud when it fell), and *forma nova* has been added (you could plainly hear the click when the coupling was made). "Forma nova," new form, that is a clincher; this simply emphasizes the fact that Hydrangea arb. grandiflora is unquestionably a new form; there can no longer be doubts on this point.

This brings pointedly to mind the old saying that someone "rush in where angels fear to tread"; not that the

demonstrator of Hydrangea arb. grandiflora was in any angle less than an angel, and he hopes to get there some day, now that the form and perpetuity and difference in coloring clearly have been proved.

Hydrangea arborea, grandiflora, forma nova.

Gather together, all ye friends of the Formosa tribe, and come over and smoke the "forma nova" pipe of peace with me.

Yours truly,

E. G. HILL.

American Rose Society.

In addition to what are already published the following prizes have been sent in for the exhibition in March: Kroschell Brothers Company, Chicago, \$10 in gold for the best vase of Killarney rose, 50 blooms or less; and \$10 in gold for largest exhibit of hybrid perpetual roses in pots.

Vaughan's Seed Store, Chicago, cup value \$25; will announce later what for.

Weiland & Olinger, Chicago, \$10 for 50 Mme. Abel Chateau.

H. N. Bruns, Chicago, \$10; premium left to society.

Poehlmann Brothers Company, \$100 cash; for best 100 pink roses, \$50, and best 50 red roses, \$50 (American Beauty and Richmond excluded).

Frederick C. Nowbald, Esq., Ex-President of the American Rose Society, offers a cash prize of \$10 for the best display of white roses.

Emil Buettner, Park Ridge, Ill., cash prize \$25.

We have this from the Chicago Florists' Club: "Be assured that you will find our Chicago boys will be on hand in good style for the rose show, but we want you to make an effort earnestly and vigorously to get pledges of attendance and exhibits from every leading grower east of the Allegheny Mountains. Chicago will take care of the rest. Now, men of the East, do you hear the call? What shall the answer be?"

All intending exhibitors are requested to send word to the secretary.

The "Rose Journal" proposition has met with a favorable reception.

Monday afternoon, February 10, 1908, the Chicago Florists' Club's committee of arrangements for the rose show met with Secretary Carpenter at the Art Institute and concluded arrangements for the use of Blackstone Hall in that building, for the show opening 5 p. m., March 26, and continuing through the 26th and 27th, day and evening, with the privilege of making such admission charge as will probably meet requirements for the local expenses, giving free admission, however, to the members of the Chicago Horticultural Society and Chicago Florists' Club. There were present Messrs. Poehlmann, Kill, Asmus, Burdett, Vaughan and Waters.

This Art Institute, with its large and high class membership, its convenient location, and the general public interest in matters there, insure the best possible arrangements that could be made for the show.

BENJAMIN HAMMOND.

Fishkill-on-Hudson, N. Y.

Partial View of Blackstone Hall, Art Institute, where exhibition of American Rose Society will be held.

Home-Made Concrete Benches.

At the establishment of Frank Garland, Des Plaines, Ill., the staff uses what spare time is available in the construction of concrete benches in the different houses. The illustration herewith shows the style of construction of the bench, and represents a portion of a new bench being at the present time installed to replace a wooden one. The bench is built on the portable principle. Sides, bottoms, cross-pieces and legs are all made separately from different molds, and any number of them may be made in advance. The bottom sections are hollow, with the edges tapered sufficiently to give good drainage. A bottom section is seen in the picture at the left of the bench.

The mixture employed in the making of the different sections, with the exception of the legs, is one part of cement to four of gravel and sand. For the legs a mixture of one part of cement to six or even eight of gravel and sand is employed. The side, bottom and cross-sections are all re-inforced with steel rods. The different molds are used on a work bench, the concrete being rammed into them, and the steel rods laid in their positions during ramming.

This construction provides a bench which may be moved at any time, in whole or part, as all sections are laid butt to butt, there being no cementing substance used other than a little mastic on the outside of the side pieces to give the appearance of solidity, and this joint is easily broken when required.

One large house at the Garland establishment has been provided with these benches for two years, and they have given every satisfaction. Mr. Garland figures their cost as being in the neighborhood of 6 cents per foot. J. H. P.

Max Rudolph's Plant.

Our illustrations show the greenhouse establishment of Max Rudolph, College Hill, O. This place contains about 25,000 square feet of glass devoted to cut flower growing exclusively. Carnations here are very prosperous, especially Aristocrat; Mr. Rudolph is very much in love with this carnation. Enchantress comes next; then Lady Bountiful. He also grows Mrs. T. W. Lawson, which is doing nicely, and Helen Goddard, which latter he will discard. The rose house contains Bride, Bridesmaid, Golden Gate and Killarney, off crop now, but of good growth.

Mr. Rudolph deserves much credit for his successful management of this place. E. G. G.

JAPAN'S SUPPLY OF BAMBOO DECREASES.—Consul General Henry B. Miller of Yokohama quotes a published statement that the supply of bamboo in Japan is gradually decreasing, as bamboo groves have been attacked by a certain disease which causes them to decay. The Kobe Bamboo Guild has addressed a memorial to the Minister for Agriculture and Commerce, asking that measures be taken for the encouragement of the cultivation of bamboo.

Movable Concrete Bench, at F. Garland's Desplaines, Ill.

Facts About Conifers.

John Dunbar, assistant superintendent of public parks in Rochester, N. Y., addressed the Massachusetts Horticultural Society, Saturday, February 15. His subject was "Hardy Conifers for Private Estates," and he said in the course of his remarks:

"The Winter of 1903-4 was the severest test that conifers have been subjected to in many years in this country. A few conifers we were experimenting with were killed outright, and quite a few were severely injured. We were therefore able to form important deductions about the hardihood of a number of species.

"Some species of conifers are liable to attack from different insect pests. During the past two or three years, the Arbor vitae has been infested by a small caterpillar which bores in the tips of the young twigs, and turns them yellow and rusty and soon gives the whole tree a sickly appearance. It is said to be a serious pest in some parts of Canada. Dr. James Fletcher, entomologist of the Experimental Farms in Canada, gives a brief account of it in the annual report of the Experimental Farms for 1906. Dr. Fletcher states that large numbers of parasites are found active in connection with the insect and there is every reason to believe the outbreak will soon come to an end. I have seen its ravages in natural Arbor vitae plantations in western New York.

I do not know to what extent it prevails in this country, as the account in the Canadian report is the first published description I have seen of it. From the nature of its operations it can be seen that it is difficult to deal with by any spraying methods.

"The mite known to gardeners as red spider is a very serious pest on some spruces and junipers in many parts of this country. It is always worst in a dry season. It can be readily controlled where there is a strong pressure of water under command applied with a hose, but that is rarely available. Water applied with a hose from a powerful spray pump will dislodge it. John E. Johnston, superintendent of Paul Dana's estate in Long Island, who is an expert cultivator of conifers, has lately been using sulphur to destroy it on spruces and junipers. He blows it on with a bellows in the morning when the dew is on the branches, followed at intervals throughout the summer with occasional strong hose sprayings of water. Mr. Johnston tells me that the experiments which he has conducted for a short time appear to be effective and satisfactory.

"The white pine weevil causes serious injury in many parts of the country. It sometimes attacks spruces and other pines, but not to any serious extent. The beetle lays its eggs in the month of May, on the shoots of the previous year. During the month of June and first part of July the larvae feed on the inner bark, and the shoots

Establishment of Max Rudolph, College Hill, O. Outside and Inside Views.

turn yellowish and brownish and soon die down to the base of infestation. If the infested terminals are cut off as soon as detected in June and July and burned, the broods of the weevils will be destroyed. Professor A. D. Hopkins, entomologist of the United States Department of Agriculture, states that this, though, may destroy large numbers of valuable parasites. He recommends placing those infested shoots in a tight barrel securely covered with wire fly-screen netting, so that the parasites may escape, while the beetles perish. By the first of October the weevils will be dead, and the netting may then be removed, but the barrel and its contents should be left until the following June, to allow the escape of the later developing parasites."

The speaker then gave brief general descriptions of what he considers the best and hardiest conifers for the north and northeastern States. He took up the pines first. The section which includes the white pines, or those with five leaves in a sheath, is perhaps the most ornamental, he said. He paid special attention to the handsome and desirable white pine, the Swiss stone, the Korean white, the mountain, Macedonian, Japanese white, Lambert's, Bhotan, the pitch, the lace bark, the yellow, Jeffrey's red, Swiss mountain, the Jack, Thunberg's, Japanese red, the Corsican and Scotch.

Larches came next in order, and Mr. Dunbar described the European larch, the Japanese, the native larch or tamarack, which, he said, is not as much planted as it should be, as it is distinct and very picturesque.

Spruces, he said, are of great ornamental value, but the Norway spruce he declared he had little respect for. The hemlock spruce was said to be among the most beautiful of conifers. The late Josiah Hoopes, who wrote an admirable treatise on conifers, said if he were restricted to the choice of only one evergreen, he would take a fine specimen of the hemlock spruce.

The firs, the speaker said, hold an important place in ornamental planting, and there are few trees that convey such conceptions of nobility and majesty. The Japanese umbrella pine with its prim conical habit is an interesting conifer and perfectly hardy. "I remember," said Mr. Dunbar, "that we grew these in pots in England, and I was much surprised when I saw them for the first time in this country looking well and happy in zero weather."

The address concluded with descriptions of native, Western, Chinese and Japanese *Arbor vitae*; cedars, junipers and yews. The Japanese ginkgo, a deciduous conifer, has shown, he said in closing, a great hardihood in the northeastern States and grows to a large size and attains mature beauty. Its usefulness as a street tree has been shown in Washington.

Carnation Splendor.

The accompanying illustrations show a house of this new carnation, which was so favorably commented upon by specialists at the recent meeting of the American Carnation Society, held at Washington, D. C.; also individual flowers of the variety showing the calyx and form. This carnation is being introduced by Stevenson Brothers, Govanstown, Baltimore, Md., who describe it as follows: "Splendor is a seedling from Mrs. Thos. W. Lawson; in color, a beautiful shade of soft pink, very distinct, lighter than that of Mrs. Thomas W. Lawson, but darker than the color of Winsor. The flowers are finely formed and borne on long, stiff, graceful stems, the size averaging from 3¼ to 3½ inches, with strong calyx. The plants are very prolific and early and produce continuously, being absolutely healthy. Unlike many of the pink varieties, the strong sunshine of Spring and Summer does not fade out the blooms, which hold their true color until it is time to throw out the plants. It has given us an abundance of flowers for four seasons daily, every shoot producing a bloom; no grass whatever.

"Splendor thrives in a moderately stiff soil and requires plenty of water, even in Midwinter. A temperature of 50 to 54 degrees seems about right for this variety. It is a remarkably easy grower. We have never cleaned a plant after being benched since we have grown it."

Our London Letter.

BY A. HEMSLEY.

NEPHROLEPIS AMERPOHLE.—At the last meeting of the Royal Horticultural Society (January 28th) an award of merit was given for this lovely variety, which was much admired by all visitors. It was shown by Messrs. H. B. May & Sons, Edmonton. When visiting their nurseries a few days ago I found they had a nice batch of plants grown in suspenders from the roof, and the plants were making beautiful fronds. I also noted that all the other plumose varieties were doing well. Whitmani and elegantissima are favorites. I found that davallias and platyceriums were receiving special attention. Some fine varieties of *Davallia litiensis* were very attractive, also the recently imported *D. braziliensis*.

CHRYSANTHEMUMS.—I thought I had said the last word about chrysanthemums for the season, but while

Carnation Splendor, Showing Calyx, Form, and Average Size of Flower.

Courtesy Stevenson Bros., Govanstown, Md.

77

writing my notes (January 31) I receive a box of beautiful blooms from Norman Davis, Framfield, Sussex. The varieties are Madame Rivol, of splendid color and a good size for market. Framfield Pink is a bright, cheerful color, and W. J. Crossley the finest crimson I have seen. Mr. Davis writes me that plants of this variety will produce from 12 to 15 good blooms on single stems, and Madame Rivol is equally free. In addition to the large specimen blooms for which Mr. Davis is so well known, he grows a good many of the more bushy plants

which produce good medium sized flowers for market, and he will be cutting blooms of best quality for at least another month.

In the market we are still getting good blooms. Of varieties noted Mrs. J. Thompson and the pale yellow variety are good, also Madame T. Panckouke, Princess Victoria, Madame Charvet, and a few others. Those who have really good flowers are receiving higher prices.

LILIUMS.—The auction sale held at Messrs. Protheroe & Morris's rooms on January 22 was well attended. Over 5,000 cases of liliams were catalogued. The cases all run about the same size and the size of the bulbs may be estimated by the number in each case. The largest bulbs made by far the highest proportionate prices. Auratum went up to 38 shillings per case of 50 bulbs, while those with 90 bulbs made only 20 shillings and some were sold at less; 200 went for 14 shillings. The variety rubro vittatum made 65 shillings per case of 100 bulbs. Longiflorum all went at moderate prices, the highest noted being 21 shillings for 10 very fine bulbs; 150 at from 14 to 18 shillings. Spectosum (ancionium) rubrum went at low prices; 10 shillings was the highest reached for 50 enormous bulbs and 11 shillings for 60. Lots of 100 made 12 shillings.

Album were more in demand; very fine bulbs of this made 30 shillings for 60; 28 shillings for 90 and 26 to 30 shillings for cases containing 120 bulbs. The variety with yellow anthers brought a keen competition. Mel-pomene did not start well, but prices went up higher later on; yet cases of 200 bulbs only reached 20 shillings. The ordinary tigrinum went very cheap, but Fortunei and Fortunei giganteum made better prices, yet the highest reached was only 20 shillings for 112 bulbs.

Some palm seeds were sold; Cocos Weddeliana went readily at 14 shillings per 1000; Kentia Belmoreana started at 12 shillings per 1000, but later cases containing 6000 seeds went for 36 shillings. K. Fosteriana made the same price. Large quantities of Asparagus plumosus seed were offered; the highest price reached was 2 shillings and sixpence per 1000; and 3 shillings per 1000 was the top price for seeds of *Lapageria rosea superba*. Gladiolus bulbs brought low prices.

W. HARRISON, recently of the firm of Cragg, Harrison & Cragg and previously manager for the late T. Rochford (now T. Rochford & Sons, Ltd.), started for America on February 5. After reaching New York, where he will remain for a short time, he intends to go farther up country with a view to settle. Mr. Harrison has three sons in the United States, and after paying a visit there himself he came to the conclusion that there were greater opportunities than in the old country for making headway. He is well known among a large circle of horticulturists. He went with T. Rochford when he first started the Turnford Hall nurseries, and remained until the place had attained to enormous proportions. A man of great energy, of wide experience, and always ready to impart his knowledge or be of assistance to others, much regret is felt at losing such a popular member of the profession, and all wish him success in his new sphere.

Bench of Carnation Splendor.

Growers, Stevenson Bros., Govanstown, Md.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIETH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BEETERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers, expert workmanship.

Kansas City, Mo.

SAMUEL MUEBAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYEE, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

EASTER ANNOUNCEMENT CARDS

We have a large stock, and will issue in ample time for the Easter season, different designs in Easter Announcements of Card, and specially for those who sell Easter cards and flowers. These Announcements are simple but effective, and very inexpensive. For a set of sample cards, etc., apply to—

DE LA MARE P & P. CO., P. O. Box 1697, NEW YORK

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

An Elaborate Dinner Decoration.

A large dinner given in one of the newer hotels last week was perhaps one of the most sumptuous affairs of the season. Several rooms were engaged for the occasion, and the work of the florist was everywhere visible. The long hall leading to the different rooms was converted into an arbor; the walls on either side were covered by a wooden lattice, an arch of the same material reaching from wall to wall. This was covered lightly with wild smilax so that the white lattice showed through, long sprays of smilax being allowed to hang from the roof of the arbor at varying distances. Rustic seats were placed here and there, and groups of lilacs filled in the corners and spaces between the seats, making a garden-like scene which was further carried out by the addition of a fountain placed at one end of the arbor, in a bower of pink roses. This effect was obtained with long heavy branches of wild smilax with quantities of full blown Killarney roses skilfully attached, to give the idea of a rambling rose-bush in full flower.

In the room for the reception of the ladies, garlands of Asparagus plumosus were suspended around the walls in graceful festoons; these garlands were made heavy in the center, tapering toward either end, the ends being caught up near the ceiling and tied with a large bow of pink ribbon.

The mirrors and mantels were decorated with growing plants of Japanese flowering almond, which has become quite popular in this market. Tall standard plants were grouped at either end of the mantel and the low bush plants filled in the intervening space. The plants were taken out of the pots and the balls of earth hidden with sheets of green moss.

The fireplaces were banked with Nephrolepis hostoniensis. Over the entrance to the banquet hall two large cornucopias made of basket work and gilded were suspended by sashes of yellow ribbon. These receptacles were filled with long-stemmed Killarney roses which fell out in showers almost to the floor on either side of the entrance, forming a beautiful arch of pink roses with the cornucopias at the apex. Groups of palms brightened up with clusters of pink roses filled in the corners of the room.

The banquet hall was the feature of the decoration. Around the four sides of the room a pergola had been erected; this was partially covered with Southern smilax. Tables were placed beneath the pergola in continuous formation, the guests being seated on the inside of a hollow square.

In the center of the room was a raised fountain, the basin being about three feet from the floor, and banked with tuffa rock. Surrounding this was a bed of Azalea mollis in varying shades from pale yellow to deep orange; following this was a ribbon bed of Narcissus Golden Spur, the effect being completed by another planting of white tulips. A carpet of artificial grass filled in the space between the tables and the central arrangement. The tables were decorated with strings of smilax, with quantities of violets scattered over the cloth.

Corsage bouquets of single violets and buttonholes of lily of the valley gave an appropriate finish to an elaborate decoration.

A Casket Pall.

A splendid casket pall attracted attention at a recent funeral; it was a loose pall, or blanket, of

violets, with a wide fringe of lily of the valley and a full length cross of white violets, slightly raised. No fern or asparagus was employed, the whole arrangement being a mass of flowers.

D. RAYBUN.

CLUB AND SOCIETY DOINGS

NEW JERSEY FLORICULTURAL SOCIETY.—Malcolm MacLorie, the new president, received the good wishes of his fellow members and friends on the 7th inst., at an informal gathering at the society's rooms in Orange. Among those present, most of whom addressed the meeting, were Thomas Grey, Boston; J. B. Kidd, New York; William Duckham, A. Herrington, Charles H. Totty, Madison, N. J.; C. McTaggart of Thorburn's; W. A. Manda and Richards Brothers.

Four silver cups won in the monthly competition shows during the past year were presented to Peter Duff, William Reid, Max Schneider and Arthur T.

Washington's Birthday Window and Store Arrangement of H. R. Hughes, Chicago.

Reflection of Snowbank has spoiled the Window Picture somewhat.

Caparn respectively, with appropriate remarks by George Smith. Letters were read from H. Weber & Sons Company, John E. Haines, Chicago Carnation Company and F. R. Pierson Company, in connection with the special carnation light in March.

The addresses were in light and humorous vein; W. A. Manda, however, asked the active co-operation of those present in the National Flower Show in Chicago, the advance sheets of the schedule of which he had just received, which offered inducements for everybody to join.

J. B. D.

Washington's Birthday Store Arrangement.

The accompanying illustrations show the window setting and store arrangement of H. R. Hughes, Chicago, which followed the display for St. Valentine's Day described in our issue of February 15. The window shows a painted representation entitled "Washington Crossing the Delaware." In the foreground there is a figure of Washington as a boy in the act of cutting down the cherry tree. The tree is seen at the right, and is illuminated by small colored electric lights. The Mt. Vernon mansion is seen at the left. In the store proper, use has been made of the colonial porch which was part of the St. Valentine's Day window setting.

Illinois State Florists' Association

The third annual convention of this association opened in Arion Hall, Springfield, Ill., February 18. A severe snow storm ushered in the day and continued until almost nightfall, blocking interurban lines and cutting down the attendance. The convention nevertheless was well attended.

The Exhibits.

It was late in the afternoon before the staging of the exhibits was completed and the committee on awards commenced work. The hall was pleasingly decorated, and the displays of carnations and roses extensive and excellent. The Chicago Carnation Company staged eleven vases of carnations; William Gullett & Sons, Lincoln, Ill., a vase of Golden Gate, Bride and Bridesmaid roses and three vases of carnations. Jensen & Dekema, Chicago, had vases of Defiance and Rudd's new white seedling carnations; A. C. Brown, Springfield, carnation Governor Deneen, and ten other varieties; J. F. Ammann, Edwardsville, Ill., Richmond, Ivory, Mme. Abel Chatenay and Uncle John roses and seven vases of carnations. J. D. Cockeroff, Northport, L. I., vase of Harvard carnations; Poehlmann Brothers Company, Morton Grove, Ill., roses Mrs. Potter Palmer, Perle des Jardins and Cardinal. E. G. Hill Company, Richmond, Ind., staged vases of Cardinal and Rhea Reid roses. Afterglow carnation; Wirth & Gaugh, Springfield, Ill., nine vases carnations.

The plant exhibits included from Albert T. Hey, Springfield, ferns, crotons, geraniums, Ficus pandurata and flowering plants. George A. Kuhl, Peoria, Ill., showed ferns, hydrangeas and other flowering plants; A. C. Brown, Springfield, ferns, azaleas and other flowering plants; Vaughan's Seed Store, ferns, asparagus, Ficus pandurata, Phoenix Roebelinii, bulbs, White Baby Rambler roses in thumb pots, dormant roses, etc.

The exhibitors of supplies were Charles Apelt, Comfort, Texas, armadillo baskets; E. H. Hunt, Chicago, Wizard manures, tobakine products, sprayers and greenhouse supplies; McCray Refrigerator Company, Kendallville, Ind., florists' refrigerator in actual use; I. L. Pillsbury, Galesburg, Ill., lawn vases, flower pots, pans, etc.; The Advance Company, Richmond, Ind., ventilating apparatus, brackets and other greenhouse fittings; Morehead Steam Trap Company, Detroit, Mich., new steam trap; Eagle Machine Works, Richmond, Ind., carnation support; Maxfield & Dimond, Warren, R. I., calyx supports; A. Dietsch Company, Chicago, section of greenhouse showing C and flat gutter and new style of ventilator and header; Harry Balsley, Detroit, red flower pots.

Morehead Manufacturing Company, Detroit, Mich., steam traps; C. F. Winterich, Defiance, O., cyclamens and ferns; Crowl Fern Company, Millington, Mass., laurel wreathing, exhibited in use as decorations.

President Hey appointed Frank A. Friedley, Springfield; Fred H. Rowe, Bloomington, and A. F. Longren, Desplaines, committee of exhibits. An orchestra furnished music during the afternoon. The exhibition was open to the public from four to ten p. m. A beautiful scroll of carnations, roses, hyacinths, narcissus and adiantum, bearing the word "Welcome," was staged at the entrance by David Wirth.

Tuesday Afternoon Session.

Antrim C. Brown, president of the Florists' Club, called the meeting to order and introduced A. G. Murray, who represented the Mayor of Springfield, Roy R. Reece, who was prevented by indisposition from making the address of welcome. Mr. Murray ably substituted. Philip J. Foley made an address in response and outlined some of the work done by the association. Mr. Hollan, representing the Ad. Men's Club of Springfield, welcomed the visitors and offered transportation and guide service on Wednesday to places of interest, weather permitting. Letters were read from the Business Men's Association inviting the convention again to Springfield next year, the fraternal order of Eagles offering the use of club rooms and halls.

President Hey's address was masterful,

dealing with the work done and making suggestions for the coming year. He detailed the granting of an appropriation by the State government of fifteen thousand dollars for floricultural experiment work, and proposed an amendment to the constitution to conform to the charter, the appointment of an advisory board to direct appropriations and the changing of the association's headquarters from Joliet to Springfield. The experiment station was now a fact and members would be able during the year to read reports of its work in the papers. The president emphasized his belief in helping and encouraging floricultural work in the public schools and outlined the progress of plans for establishing a floricultural course in the University of Illinois. At the experiment station he advocated the testing of all insecticides and fungicides placed on the market, and the insistence that none be allowed to be sold in the State without the department's stamp of approval. He also advocated the making of an effort

to secure the report also containing a form of resolution suggesting that the S. A. F. memorialize the census bureau to devise a practical plan for obtaining a correct census of the florists' trade, which resolution carried.

E. Pavenport, Dean of the Illinois State University, was unable to be present to deliver an address on "Floricultural Interests at the University of Illinois," but in a letter of apology dealt with the matter and promised support in the association's plans.

W. N. Rudd as secretary of advisory committee of the Illinois State Florists' experiment station, presented a report dealing with the work of his board, and its efforts to dispense to best advantage the Government appropriation. It contained suggestions for extended work and lent hope for increased appropriation. Attached to the report were plans for a greenhouse establishment prepared gratis by the Foley Company to meet the requirements of the station, which plans were laid before the association for discussion and suggestions.

The president appointed as a committee on National Flower Show, F. L. Washburn, W. N. Rudd, W. L. Kroeschell; and on State Fairs, J. F. Ammann, George Asmus and A. T. Pyfer.

Albert T. Hey.

Re-elected President Illinois State Florists' Association.

to secure a proper census of the florists' trade in order that a better basis for appropriations be obtained. He had given instructions that the association would be sponsor for a share of the expense attending the National Flower Show at Chicago and recommended the offering of some prizes by the association and the appointment of a committee to act in the matter; he also recommended the appointment of a committee to devise a plan for awards for exhibits made before the association. Reference was made to the desirability of increased interest in the floricultural section of State fairs, and a suggestion made for a committee to take up the matter. He also advocated the extension of horticultural ideas in public schools, declaring that flowers and vice will not grow together. The report was well received and was referred to a committee to consider the suggestions contained in same.

The secretary then made his report, chiefly in a financial way, and dealing with present financial status of the association. The treasurer's report followed, showing a small balance in the treasury and all bills paid.

E. G. Hill made an address enlivening the president's report and in general concurring in the views expressed therein. He then described his recent travels in Europe in horticultural sections.

J. C. Vaughan, for the committee on president's address, reported favorably on most of the suggestions contained in

Wednesday Session.

Mr. Rudd, reporting for the committee on granting awards for the National Flower Show, announced a subscription by members amounting to \$50, the amount to be expended in the purchase of a trophy for competition under terms arranged by the premium committee. The report was adopted.

Mrs. Walker of the Women's Club of Springfield made an address on "The City Beautiful," and "Civic Improvement," and detailed the good done by school children in this direction. Professor Collins, superintendent of public schools, endorsed the statements of Mrs. Walker and told of the distribution of eleven thousand packages of flower seeds among children. Jas. S. Wilson also spoke of the scope of the children's flower show last year.

Professor Irish, St. Louis, who was to address the meeting on "Summer Bedding" sent apologies for inability to attend through sickness. Professor Bailey of the University of Illinois, made a short address dealing with co-operation by his university in research work along floricultural lines taken up at the State experimental station.

Secretary Beal then read a paper on "Our Experiment Station and What We Have Done."

J. J. Davis, assistant to Professor Forbes, State Entomologist, made an interesting address on "Thrips, Their Species and Habits." It was arranged

that the address be put into form for purpose of record and publication.

A resolution on the death of P. J. Hanswirth was presented and carried by a standing vote.

Some minor changes in the constitution regarding the establishment of an Advisory Board were next considered, and ultimately ratified.

Upon recommendation of the executive committee, E. G. Hill was elected an honorary member.

The election of officers resulted as follows: Albert T. Hey, president; J. F. Ammann, secretary; Frank L. Washburn, treasurer; George Asmus was elected vice-president in place of Mr. Ammann.

Upon invitation of Antrim C. Brown, Springfield was again elected as place of next meeting.

Reports of audit and exhibition committees were received and filed.

Final business was a resolution expressing the thanks of the association to the Springfield Florists' Club for courtesies and entertainment during the meeting.

A banquet tendered to the Illinois State Florists' Association by the Springfield Florists' Club was held at the St. Nicholas, on Tuesday evening. The tables were handsomely decorated with carnations, and the guests wore violet bouquets. An excellent orchestra and quartette entertained the delegates. The menu was first class. After coffee Hon. Chas. E. Hay acted as toastmaster. "Future of our State Association" was the toast responded to by J. F. Ammann. "I Love not Man the Less, but Nature More," by C. E. Gullett. "The National Flower Show" was well handled by J. C. Vaughan. "Springfield, as a Convention City," fell to Nicholas Roberts. The "Hoosier Florist," very naturally was assigned to E. G. Hill; "University of Illinois," found a respondent in Professor Edmund J. James. The "Ruddy Side of Life" got its response in W. N. Rudd. "City Beautiful" fell to Stuart Brown, and Phil. J. Foley gloried in a response to the toast "He who Loves a Garden Loves a Greenhouse too." About 125 covers were laid and the banquet adjourned at a late hour.

Among those present were: George Callahan, Bloomington; I. L. Pillsbury, Galesburg; R. F. Donnell, Springfield; C. Loveridge, Peoria; Leonard Kill and George Asmus, Chicago; J. M. Cole, Peoria; Harry Johnson, Bloomington; George B. Franks, Champaign; A. S. Halsted, Belleville; George A. Kuhl, Pekin; A. F. Longren, Desplaines; W. J. Rupp, Chicago; Adolph H. Poehlmann, Morton Grove; Alfred Dietsch, Chicago; Axel Aggerholm, Onarga; A. C. Beal, Champaign; A. R. Knowles, Bloomington; George M. Garland, Desplaines; W. L. Kroeschell, Chicago; H. B. Howard, Chicago; A. T. Pyfer, Joliet; Peter Olsem, Joliet; Fred H. Rowe, Bloomington; James W. Adams, Normal; W. E. Lynch, J. H. Pepper and Phil. Foley, Chicago; J. S. Wilson, Western Springs; W. N. Rudd, Morgan Park; J. C. Vaughan, Chicago; E. G. Hill and John A. Evans, Richmond, Ind.; William Breitmeyer and Harry Balsley, Detroit, Mich.; J. F. Ammann, Henry Blixen, and Edward Blixen, Edwardsville; E. W. Guy, Belleville; A. Peterson, Hoopston; S. E. Lawrence, Arrowsmith; R. A. McPherson, Litchfield; B. Jurgens, Peoria; C. E. Gullett, Lincoln; J. E. Jensen, Chicago; Mr. Klopfer, Peoria; R. W. Pde, Jr., W. J. Pilcher, Frank H. Venneman, Kirkwood, Mo.; Wm. C. Smith, George H. Augermueller, H. G. Bering, St. Louis; Edwin Denker, St. Charles, Mo.; Carl Raith and Frank Friedley, Springfield, Ill.

J. H. Pepper.

Philadelphia.

Notes.

Items of news are very scarce. There is quite a lot of work going on in the decorating line, but most of this is of the flag and hunting order with wild snailax and azaleas; nothing that is using up cut flowers. Social affairs are quiet; even the last two opera performances have not been preceded by the usual number of dinners.

The Pennsylvania Horticultural Society held its regular meeting on Tuesday evening, the entire meeting being taken up with exhibition matters for the present year, which will be carried out as last year. Spring show in Mar. pony show end of May; sweet peas and roses in June, and dahlias in September.

DAVID RUSSELL

FERNS

MY SPECIALTY

I have an immense stock of assorted ferns for Jardinières, healthy and bushy, none better; in 15 of the best market varieties, including *Cyrtium Filicium*, *Aspidium Fuscumense*, *Pteris Wimsettii* and *Maylit*, in good proportion, from 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000; 600 at 1000 rate.

CENTER PLANTS (Exact Size)

- Kentia Belmoreana*, 2 1/4 in., \$1.30 per doz., \$10.00 per 100.
 - Assorted Ferns, 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
 - Adiantum Cuneatum*, fine stock, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000; 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
 - Adiantum Farleyense*, 4 in., \$4.75 per doz., \$35.00 per 100; 5 in., \$8.50 per doz., \$65.00 per 100, 6 in., \$12.00 per doz., \$115.00 per 1000.
 - Adiantum Graecillum*, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000.
 - Cyatium Schiedei*, 4 in., \$3.50 per doz., \$25.00 per 100.
 - Nephrolepis Scottii*, 5 in., \$7.00 per doz., \$60.00 per 100; 8 in., \$15.00 per doz., worth the double.
 - Elegantissima* and *Pteroni*, 5 in., \$5.50 per doz.
- Fern Spores, gathered from my own stock, guaranteed fresh, 1907 crop, good commercial varieties, 30c. per trade pkt.; \$3.00 per dozen.

J. F. ANDERSON, Short Hills, N. J.

LATANIAS

Fine strong plants, 2 in. \$3.00 per 100, \$25.00 per 1000; 3 in. \$5.00 per 100, \$50.00 per 1000; 4 in. \$15.00 per 100.

KENTIAS, *Belmoreana* and *Forsteriana*, 4 in. 25c., 35c.; 5 in. 50c., 75c.; 6 in. \$1.25, \$1.50; large plants, \$2.00 to \$35.00 each.

PHOENIX, large, from \$2.00 to \$40.00 each.

PANDANUS UTILIS, strong 2 in. \$3.50 per 100; \$30.00 per 1000.

AZALEA INDICA, fine plants, 35c. to \$2.00 each.

FERNS

Boston and *Pteroni*, 4 in. 15c., 5 in. 25c., 6 in. 50c., 7 in. 75c.

ORCHIDS

We are now booking orders for freshly imported orchids of all leading kinds to arrive during 1908, at greatly reduced prices. Write us for information as to kinds and prices.

We have just received the following orchids: *Oncidium Tigrinum*, *O. Sarcoodes*, *O. Forbesii*, *Sophranitis grandiflora* and *coccinea*.
LAGER & HURRELL, Summit, N. J.

ORCHIDS

We shall receive this Spring large quantities of imported ORCHIDS, namely: *Cattleyas*, *Dendrobiums*, *Oncidiums*, *Laelias*, *Vandias*, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.

California Plant Notes.

HARDENBERGIA MONOPHYLLA.—Of the many hardy vines grown on this coast, *Hardenbergia monophylla* is one of the most beautiful. The flowers are borne in racemes three or four inches long, in great profusion, for the three or four first months of the year. They are of a dark violet color, and set seeds freely which grow readily. A native of Australia, it fits our climatic conditions to perfection, even in the interior valleys where the Winter temperature is lower, Summer temperature higher and the atmosphere more arid than along the coast.

GELSEMIUM SEMPERVIRENS, the yellow jessamine of the South Atlantic States, does well here if planted in partial shade. It is one of our pretty Winter bloomers, though not so fragrant, nor does it make so vigorous a growth as in its native habitat. It is difficult to root from cuttings. While it should have a place on all large establishments, there are other vines quite as attractive and better adapted to our climate, notably *Bignonia Tweediana*, that are more suitable to small places.

SAXIFRAGA LIGULATA, VAR. RUBRA is now in its glory and will so continue for the next three months. If planted in partial shade and well fed, it is one of our most attractive border plants, yet few gardens about here have a plant of it in their collections.

CHORIZEMA VARIUM.—A half-climbing shrub of surpassing beauty at present is *Chorizema varium*. Why this plant is not extensively grown in Southern California is one of the strange things in our horticultural efforts for fine Winter-blooming effects. Not a difficult subject to propagate, and perfectly adapted to our climate as most Australian plants are, I know of but one specimen in this town, which is worth going a long way to see.

GARDENIA FLORIDA.—One of the failures on this coast is Cape jessamine, *Gardenia florida*, or, to be correct, *G. jasminoides*. Of the many attempts at acclimatizing this desirable subject the writer does not know of a single successful effort. The fact is, our atmosphere is too arid most of the year to get a good green leaf.

THE CALIFORNIA FUCHSIA.—Reference has been made in these notes to our California fuchsia, *Zauschneria californica*. Observations and experiments last Summer lead to a knowledge of the following facts: It is a difficult subject to transplant from the wild state successfully. In its wild state it began to bloom as my notes show, June 22 and continued so to do until October; this without rain or irrigation, while the one in Botanic Garden, University of Southern California, where with other plants it was watered freely, did not bloom until September and then but sparingly. This plant suckered freely; the suckers rooted readily, and proved to be a more desirable method of propagation than from seed. A beautiful evergreen with delicate, silvery gray foliage, it should be found in every collection of plants in sections of the country with a dry climate, and where water is scarce for irrigating purposes.

P. D. BARNHART.

MISCELLANEOUS

Rather Than Throw Them Away

We have some unbound sets of American Gardening, weekly, published in 1892, '95 and '96, which we offer to subscribers in good standing, and will deliver, carriage paid, until sold out, at fifty cents per volume, which amount simply pays the expense of its delivery into your hands.

These volumes contain a vast amount of good practical information, and we thought our subscribers might appreciate them, this is our reason for offering them at postage cost rather than throw them away. They were published during the period that magazine was owned by this company. Cash with order, please. A. T. De La Mare, Ptg. & Pub. Co., Ltd., No. 2 Duane st., N. Y.

A Long Felt Want Supplied

The Greater New York Employment Agency can furnish help of all kinds for florist and greenhouse work. Any nationality. Address

EASTER ANNOUNCEMENT CARDS

We have in preparation, and will issue in ample time for the Easter season, six different designs in Easter Announcement Cards, prepared specially for those who sell Easter stock at retail. These Announcements are simple but effective, and very inexpensive. For a set of samples, etc., address

Te La Mare P. & P. Co., P. O. Box 1697, New York

FORMOSA LILIUM LONGIFLORUM

Ask your dealer for our own special grown stock or write us direct for quotations. Only a limited quantity available for the coming season 1908. Delivery will be made the first part of August.

The bulbs are thoroughly ripened one month before the Bermuda Harrisii and are considered far superior in quality, as they are entirely free from disease.

Careful trials were made for two years and were so successful that we imported over 300 cases last season.

Our cases will be marked Y. N. Co.

The Silver Cup, offered by W. J. Vonderheide for the best 100 blooms of any variety to be disseminated in 1908.

Also awarded

GOLD MEDAL by the Rhode Island Horticultural Society at Providence, Nov., 1907. (Exhibited by Wm. Nicholson)

FIRST PRIZE by the St. Louis Horticultural Society at St. Louis, Mo., Nov., 1907. (Exhibited by E. G. Hill Co.)

SCORED the highest number of points of any seedling exhibited at the Toronto Exhibition of the A. C. S., Jan., 1907, after arriving 24 hours late from Framingham, Mass.

ASIDE from these honors, the fact that it has been grown successfully wherever it has been tried, is the best proof of its commercial value. Orders now booked by the undersigned, to be filled in rotation, for well grown, well rooted cuttings at **\$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.**

WILLIAM NICHOLSON, THE E. G. HILL CO., DAILLEDOUZE BROS., R. WITTERSTAETTER.
Framingham, Mass. Richmond, Ind. Flatbush, Brooklyn, N. Y. Originator, Sta. F. Cincinnati, O.

not in houses covered by improperly laid glass and heated by smutty, ill-drawing soft coal firing. A washing of pots will also brighten up things and becomes necessary when scummed over, slimy and harboring snails. Brown scales on palms are bad and should not be present in a good gardener's palm house or, for that matter, in any of his other houses. Brush and whale oil soap, diligently applied in a tedious chase among spines and fronds by a patient but bright-eyed person is the remedy. A badly infected plant is hard to clean of this pest and should never be placed back among others free of it. Mealy bug, or the little white scale, sometimes found on closely crowded palms after the Winter is gone, can more easily be got rid of, as also red spider, should hard firing have caused its inroad in isolated spots. Forceful syringing alone will usually end the trouble, if repeated several times. If the plants are not too large to admit of being immersed in whale oil soap suds, stood up for half a day and then given a hard syringing with clean water, this process will be found to be the most satisfactory. The sides of the cleared bench, as the good work proceeds, should also receive a going over with brush and soap, and the bench itself, the sand, tanbark or coal ashes on which the plants are to be set up again in re-arranged order, should either be replaced with clean, fresh material, or be drenched once or twice with boiling water. The use of kerosene in any form or, in fact, of whale oil preparations also, where ordinary kinds of soap could just as well be used, leaves a disagreeable odor in the house for weeks. This, therefore, as the often needless use of lime wash, warning customers from entering and unsightly at all times, are not attractive features to be added in trying to improve upon conditions in a show house. It is now time to provide for some convenient scheme in the matter of shading which will afford protection against unseasoned of soft young growth. The permanent covering of the entire outer glass surface with a coating of paint, lime, whitening or some such substance should be delayed until June.

Transplanting Palms.

When a palm has reached a certain limit in height and spread, encouragement of further growth by whatever means is not desirable, not in a place where palms must often be handled as decorative material in back and forth transit to and from halls and churches. So also is there a limit to the size of salable palms as most readily disposed of by retail florists, beyond which they cease to be desirable stock, and any further increase in size means a decrease in value commercially, when actual profits form the basis of figuring. It is not at all impossible to keep a good sized palm in perfect condition for even a number of years, if need be, if denied high temperatures and frequent transplanting; a pot apparently too small for its size does not impair relative symmetry to the extent that one proportionally too large would. At the same time the smaller pot restricts to a great extent root action and consequent exorbitance in growth, and thus the weight of both pot and plant is not needlessly increased as it certainly would be in a very rapid shifting from pot to pot as seemingly required by healthy, vigorous palms of advanced size, were the grower to humor them in this particular. In doing what now seems most urgent about the house, containing larger sized palms, transplanting is the least pressing, and only specimens needing it so badly that further delay would seem to impair their health, cause stunted or unbalanced appearance or render watering or proper treatment henceforth difficult, should undergo the operation. A rather heavy and liberally enriched soil is the kind to use and it should be well firmed all around the old ball of roots, which in the case of palms resent any kind of cutting in or severe trimming down.

Young palms, grown in blocks by themselves under a regular warm house treatment, present quite a different proposition as regards transplanting. A frequent repotting in their case is a means that of all others must be adopted when speed in sturdy growth is to make them salable stock in the shortest possible time. If sprightly growing on in a congenial atmosphere and temperature, not much below 60 degrees at any period during Winter, a shift of the most advanced will even have been

THE WEEK'S WORK

Timme's Timely Teachings.

The Palms.

Now when the season of diminished daylight and artificially maintained temperature is gradually nearing its close, palms are among the first to feel the influence of lengthening days. To enforce complete rest during the dreary months of Winter is only possible in the case of the hardiest species and not even then when palms form only a part of the various kinds of stock the retail grower is compelled to carry through the Winter. An entire stand-still in growth at any time is not even desired in the case of species usually handled in quantity at the present state of plant commerce. The smaller grower, who in his efforts to keep himself well supplied in this line, confines himself to kentias, arecas, phoenix, latania and a few cocones in varying sizes, is entirely up-to-date. If his business requires the carrying along of large specimens for decorative purposes, and if his sales in palms amount to anything at all worth considering, he will have a house especially chosen for the display of palms, arranged for effect. This is proper, and if ferns are used in connection with palms this part of the establishment can be made to be none the least attractive of any. But when the welfare of the stock so displayed is considered, the culture of palms and ferns by following this plan has its disadvantages, and the necessity of lessening evil results as much as possible becomes apparent.

House Cleaning.

There is no house exclusively given over to effective display of palms, ferns or decorative stock of any kind, either by themselves or in combination, that could year out and year in be maintained in a condition creditable to the management without being thoroughly gone over from time to time.

Private and park gardeners realize this and they are continually kept busy to maintain respectable appearance of conservatories and contents. Neither does in a house, frequently invaded by the stir of business, the oft-recurring disposal and subsequent replacement of some of the plants, render needless occasional re-arrangement from end to end and top to bottom. Pleasing effect in arranging plants of different sizes, spread and character cannot be brought about without favoring but a few and depriving the greater number of every chance to develop into perfect specimens—not in a house where all available space must be utilized, as is the case wherever stock is grown for profit. At the same time, every opportunity is offered for scale, red spider, mealy bug, snails, woodlice, scum and filth to come right in and have a good time. Nothing but a thorough-going clean-up will forestall permanent injury being done to valuable stock. It is well to undertake the unavoidable job at this time and before Spring begets new life.

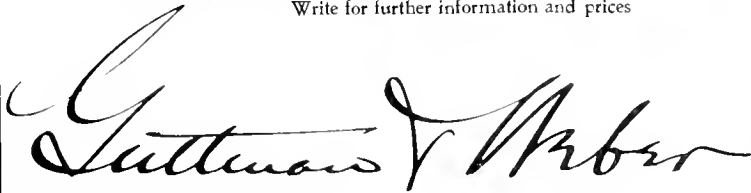

It will be found that the appearance of specimen palms is wonderfully improved by a good sponging—an operation never too often repeated, especially

found to be necessary before this in the case of most species as now grown extensively for retailing; but for the regular Spring transplanting it is now time to begin.

Ferns.

When once a retail florist has fallen into the habit of using ferns from little pots for every description of made-up plant or floral piece, it is hard to break him of it, should this seem necessary. The practice is beyond criticism if in his own combined make-up the true artist and the wise economist are equally well represented. Much depends on the kind and character of his trade and on the resources at his ready command to fill all sorts of short notice orders. At all events the work turned out, where this practice prevails, thereby loses nothing in artistic finish, more often outranks in grace of contour and combined effect anything of similar design but in the construction of which the various kinds of cheaper greens were used.

Small ferns are extremely serviceable for a great variety and number of purposes and if lavishly made use of, it is a matter of importance to be at all times well supplied with this kind of stock. There is no difficulty to raise all or most of what is needed in this line from spores, and the grower who confines himself in his efforts to work up stock for his particular trade to but a limited number of kinds, will derive as much profit from an attempt on this tack as any other. The majority of retail florists, however, who grow many things handled in their business but cannot think of growing all, also include small ferns in what they are compelled to buy in stock already started. The retailer, not fitly equipped for a variety of cultures, but having a good local trade, is of necessity less of a grower than a plant merchant, and as such he cannot raise his young stock, ferns in particular, as cheaply as he can buy them from specialists. Much of the fern stock thus obtained, coming from trays or out of pots, needs but little in the way of continued culture to be right for the purposes small ferns are to serve. But if grown on with proper care, many of the little plants will develop into good-sized fine specimen ferns that sell readily at all seasons, the available supply in properly grown plants of this character never being within hailing distance of the demand in many localities, where nephrolepis is all and everything to be had in marketable potted ferns.

Nephrolepis is everywhere in evidence, is the leading fern and on many retail florists' places the only kind grown, even to the entire exclusion of anything not just the old original Boston fern. That nephrolepis is extensively cultivated by everybody is not to be wondered at, for it is easily multiplied and easily grown into ready money, the sales still keeping pace with production despite the annual increase in output. This is to be accounted for in great part by a cheapening of prices, the inevitable consequence of widespread production and sharp competition, which enables all classes of people to freely make use of it, so that now the Boston fern is conspicuous in every household, adorning the interior in the Winter, and front and back porch in the Summer, is to be seen in nearly every show window, that of butcher and barber as well as the undertaker's, whose living trademark it has been from the time of its first introduction. And more than ever was believed possible are Boston ferns now employed in the filling of veranda boxes, vases and even garden borders, not only where flowering plants fail to thrive, but in the most freely exposed situations, effective in every instance, and, if properly cared for, defying wind and weather and remaining in good shape all Summer through. No wonder, therefore, that the great number of Boston ferns, as grown every year, find good uses. But it is less easily explained why many of the retail growers persist in handling only the old type, when the beautiful sports of later origin, especially those of recent introduction, are no more

WINONA

The True Pink Carnation for 1908.

A color that attracts attention. Once seen, always wanted.

Comes nearest to Defiance, but is a different type flower. Never Bursts—Every Calyx Perfect. Good, shape active growth. Blooms early and in quantity. A grand commercial variety. See it at a trial and compare the returns. We have a large stock clean and healthy. Will guarantee every cutting to be first class. Order now for early delivery. Price, \$12.00 per 100; \$100.00 per 1000. Larger lots, prices on application. With our additional glass we have more than doubled our stock our stock of carnation plants, and can fill orders for rooted cuttings to even better satisfaction than in past years.

difficult to grow than the seemingly indomitable Boston fern.

Treatment of Ferns.

There is probably no other class of plants more readily responding to judicious treatment than ferns, or any more easily ruined by improper culture. Conditions such as over-fertilized soil, excessive heat and a stagnant atmosphere, heavily charged with moisture and constantly overshadowed by a dense coating of paint on the glass, afford the sort of high living to which many species of ferns are only too willing to yield. It is not the treatment that will build up the commercial fern. It is the excess in all these details of culture which works mischief, promotes soft growth, favors insects, causes disease, twists and cripples hastily pushing fronds and ultimately leads to premature exhaustion and death. The grower of ferns for his home trade or for the market, whether potted plants or cut fronds, if he is not a specialist, will come as near to being right in the culture of such kinds as he is apt to grow as is consistent with proper management, if he subjects all the varieties to one and the same treatment as regards soil, temperature and moisture. As to replanting, propagation and shading the methods to be adopted must differ.

The soil for small ferns should be a mixture of sandy peat or turfy loam one part, and two parts of leaf mold. As they attain size, beginning with the 4-inch pot, a heavier soil is used and instead of leaf mold, well rotted old hotbed manure is added and the pots are well crooked. Very firm planting is not good for ferns; but stirring the surface of the soil occasionally is a good plan. Root-bound large specimen ferns need copious watering and in their case a light dose of liquid food from time to time will be of benefit. On the other hand, ferns newly divided or transplanted or weak and sickly, must be watered with the greatest of care, although at no time should fern roots ever become dust dry.

The temperature is right if held at the point of 60 degrees as near as possible the whole year through with a slight lowering at night and a corresponding rise through the mid-day hours. Well-established pot plants of nephrolepis, polypodium, adiantum, nephrodium, some varieties of lastrum, pteris, aspidium and a few others will safely endure quite a cool and fairly dry atmosphere; but the hardening off should be accomplished gradually; a sudden removal from out of a congenially humid temperature of probably 65 degrees to one perhaps not higher than 40 is likely to spoil them as salable stock; and to get them back into fair condition after that is extremely slow work.

Healthy ferns, mounting new fronds in continuous succession or a fresh crown growth periodically, need for perfect development of growth a reasonable amount of atmospheric humidity, never to the extent of showing condensation in the form of dripping moisture on the plants or about the house at nightfall.

VICTORIA

NEW SEEDLING, crossed by Lawson and Harry Fenn, the color of Lawson and the long stem of Harry Fenn; it is more profuse than either. Lawson is past. Victoria is better than Lawson ever was, and gave us last Winter from 20 to 95 per cent, more blooms each month. It is very healthy and a nice grower. I have two houses of it, and it is a sight to see the buds and blooms. It brings more money in the market than Lawson. Read below what J. A. Budlong & Sons Company of Auburn, R. I., say of it. They are growing it this Winter. J. A. Budlong & Sons Company are one of the largest market gardeners in New England also the largest rose and carnation growers in Rhode Island.

Mr. J. H. Cushing, Quidnick, R. I.
Dear Sir: We have 1175 plants of your new seedling Victoria carnation which we planted in house the last of July. They

QUIDNICK GREENHOUSES

have made fine plants and we think now will produce as many flowers, if not more than any carnation we ever grew. The stems are stiff and good length. The flower is also a good keeper.

We have sold these flowers in several instances to some of our best trade in Boston, who thought they were a long-stemmed Lawson.

Up to date, we have cut 4768 flowers from the 1175 plants, and there are as many buds in sight to-day as there have been any time since we started to cut. In other words, the cut has been very uniform and looks as if it would continue so throughout the Winter.

We do not think that you will make any mistake by putting this carnation on the market. Yours truly,

THE J. A. BUDLONG & SONS CO.

CUTTINGS

We beg to call your special attention to Winsor and White Enchantress. We have an immense stock of these two grand carnations and can give immediate delivery on cuttings, from soil or pots, strictly first-class stock, absolute satisfaction guaranteed. No order too large, no order too small. Try us.

White Bros., Gasport, N. Y. Cash with order, or satisfactory reference.

Air also is necessary to counteract stagnation; strong drafts are death to tender, young fern-growth during the months of Winter and at no time especially good for ferns. Shading is necessary for newly planted or repotted ferns, and beneficial, though not absolutely needful, to established and growing ferns. It all depends whether it is employed heavily and continually or with reason. A light shading during the brightest hours of cloudless days from about now until the end of October is good for all ferns, a point in the proper culture of

most evergreen, glass-houses-grown species, even including nephrolepis, if appearance counts as much as endurance in estimating their commercial value.

In propagating ferns by division it is best to cut up or pull apart only such old plants as are still in active growth or just beginning to show new life. Those multiplied by runners from under or over the ground are more apt to send forth an abundance of these in all directions, if given free play under bench culture, as in the case of Boston fern, polypodium, etc. FRANK W. TRIMM

THE FLORISTS' EXCHANGE

WHOLESALE FLORISTS
54 WEST 28th STREET, NEW YORK.
Telephone: 3559 Madison Square
CONSIGNMENTS OF CHOICE CUT FLOWERS SOLICITED. PROMPT PAYMENTS. GIVE US A TRIAL

NEW YORK.—The cut flower market shows little, if any, improvement over last week. Conditions continue very unsatisfactory, and a fixed price along any line is out of the question. Roses are more plentiful and prices are tending downward. The supply of carnations shows no abatement, and \$2 per 100 seems to be an outside price for the very best standard varieties. Lilies are in abundance, as are callas, lily of the valley, narcissus in many varieties and tulips. Sweet peas are not so plentiful as they have been in other years; still, there are enough to meet all demands. The supply of freesias is becoming heavier, but gardenias and catleyas do not show much increase in quantity as yet. A limited supply of snapdragons and cornflowers is coming in daily.

To say the least, business is very unsatisfactory for both growers and dealers. The retail store men do not seem to be burdened with too much work, and the weather has been too cold for the sidewalk peddlers to get busy. As soon as we get a little warm weather, no doubt the surpluses will be moved off to the street men at some price or other. With present conditions, it is impossible to clear out satisfactorily the increasing stock that is reaching the city every day.

CHICAGO.—While the market is not characterized by pronounced activity in any line it is, nevertheless, in a fairly satisfactory condition. The weakest spot is in the carnation quarter, and carnations are still close to the glut point. The oversupply in these flowers does not, as usually, affect only the poor grades, but many of the fancy sorts. Eucharis is particularly affected among the higher grades, being most common. There is hardly a question about the fact of this variety being too extensively grown, its sacrifice in the market this week furnishing sufficient evidence. White carnations are overabundant and move slowly, excellent stock going off at a dollar a hundred. Reds are more fortunate, and on the whole sell well, but at times exhaust all the wiles of the salesman.

Roses are still the strongest commodity in the market. American Beauty are scarcer than ever, and prices in consequence are again advanced. There is very little probability of an easier supply for a week or two yet. Bride and Bridesmaid are not too plentiful, the crop now due not having materialized, owing to the long spell of dull weather recently experienced. Killarney among the teas is commanding the best prices.

Bulbous stock is still in oversupply, and movement at times is on a sacrificial basis. There are more daffodils coming in than the market will absorb, therefore the sales made are confined mostly to selected stock; low grade flowers await the bargain hunter, and not infrequently the ash barrel Tulips are also overplentiful, but the better sorts, if they have long stems, move fairly well. Short stock is not wanted at any price. Sweet peas sell well, and there is plenty of good flowers to be had. Lilies are in better supply, and clean up nicely; but lily of the valley does not fare very well, much of it being forced out at minimum prices. Orchids are in good demand, but the supply is meager, particularly cattleyas. Violets are plentiful; eastern violets have been running somewhat light in color, though otherwise good, and this has kept prices of Hudson stock below the local scale. The bright weather now being enjoyed should have a wholesome effect on the market before many days are passed. J. H. P.

ST. LOUIS.—Business has been good here the past week. Most of the retailers report a very good day's trade on St. Valentine's Day; violets sold very well and the wholesale market was loaded down with them—all California. There has been a great deal of funeral work, and all the wholesale salesmen had large demands for white flowers every day during the week. On violets, carnations and roses prices remained steady, as only a limited quantity of stock is coming in. Specials in roses realized from \$10 to \$12 per 100; firsts, \$6 to \$8, and shorts, \$4 to \$5; American Beauty, long fancy, \$4 per dozen, \$2 to \$3 for next choice, and from \$4 to \$5 per 100 for shorts. Carnations, extra fancy, 3 to \$4 per 100; next grade, \$2 to \$2.50, and common, \$1.50 per 100. Bulb stock lily of the valley, \$3 to \$4; tulips, \$3; jonquils, \$3; Roman hyacinths, \$1 to \$2; Paper White narcissus, \$3; Von Stern, \$3; freesias, \$1 to \$2; callas, \$10 to \$12.50; violets, \$50 to \$60; sweet peas, 50c. to \$1 per 100. ST. PATRICK.

BOSTON.—There is little change in business, it is dull, yet there seems to be a little doing, but the good prices which generally prevail are not to be had. Roses, which have been the best selling of any flowers recently, are now more plentiful and prices have dropped although an effort is making to maintain the high figures on such fancy varieties as American Beauty, Richmond and Killarney. Carnations in colors are selling better than they were a week ago but prices are low. Lilies are still plentiful. Violets are good and sell fairly well. Dutch hyacinths have made their appearance; Roman hyacinths are not so plentiful. Paper White narcissus have shortened up in supply somewhat. Golden Spur and other large narcissi are selling well. Sweet peas are plentiful but clean up fairly well. Lily of the valley finds a fair demand. J. W. D.

BUSINESS DIFFICULTIES.

WINCHESTER, TENN.—J. W. Shad-dow, proprietor of the Cedar Hill Nursery and Orchard Company of this place, has made a voluntary assignment in favor of Hugh Morton, trustee, for the benefit of his creditors. The estimated cash value of the assets is \$60,000, and liabilities are \$42,000. Included in the assets are twenty-two peach orchards in Alabama and Georgia. The Cedar Hill Nursery did an average annual business of \$250,000, and employed a large number of hands. The business will be continued by the trustee, and it is said the obligations can be met within a year.

FIRMS WHO ARE BUILDING.

WYOMISSING, PA.—Frank Shearer has begun the erection of another greenhouse.

LAFAYETTE, IND.—Herman Roth will add another greenhouse this Spring.

OTTAWA, KAN.—A new greenhouse, 86x21 1/2 feet, is being added to the Lester plant; this will increase the firm's space to 10,000 square feet.

CHANGES IN BUSINESS.

RIDGEFIELD, CONN.—George I. Haight has purchased the lot owned by J. L. Dauchy, on the Danbury road. Mr. Haight expects to build on this site and remove his greenhouses there also.

DES MOINES, IA.—The Guthrie-Lorenz Company has opened a flower store at 420 Sixth avenue. The members of the company lately organized are Mr. Guthrie, formerly of the Iowa Seed Company; Miss L. E. McMillen and Oliver Lorenz, who is at present with the Baker-Trister Company.

FARGO, N. D.—The firm name of Shotwell & Graver has been changed to that of the Shotwell Floral Company. Winthrop E. Shotwell purchasing the interest of J. L. Graver, and will continue the florist and nursery business with A. T. Shotwell under the name given above.

MOBILE, ALA.—The Minge Floral Company has been incorporated with a capitalization of \$20,000. The officers of the company are: Maria Minge, president; Wyndham Lyon, secretary and treasurer; and W. M. Bailey, manager. Miss Minge and Mr. Bailey have selected and the new company has purchased a ten-acre tract of land and has also secured options on lands adjoining for the enlargement of its greenhouses and gardens as the same becomes necessary. Orders are in and the manufacturers will soon have ready to ship a battery of sixty-horsepower boilers, with steel tubing for steam heat to supply ten Foley greenhouses that are now ready for shipment, and will be set up upon arrival, and when ready for use will enclose 26,000 feet of ground with glass. The office of the company will be at 100 St. Joseph street.

FIRES.

BRAINTREE, MASS.—On Tuesday, February 4, 1908, fire caught in one of the four large greenhouses of George Henry Arnold, on Middle street, and damaged the building and destroyed the plants and vegetables. The blaze started from overheated pipes in the boiler room and was confined to the building where it started, and damaged that structure \$500. Mr. Arnold valued the plants and vegetables at between \$2,000 and \$3,000.

Always in Demand

ARAUCARIA ROBUSTA COMPACTA and GLAUCA

JUST LOOK! An ARAUCARIA ROBUSTA COMPACTA OR EXCELSA GLAUCA, worth a ten dollar bill, perfect shape and color, 6-7 in. pots, 6-year-old, 4-5-6 tiers, 20 to 40 in. height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. height, \$2.00 and \$2.50; 6-7 in. pots, 6-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. Excelsa, 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 75c.; 2-year-old, 2-3 tiers, nice little plants, 6-8 in. high, 40c. WHITMANI, larger than 8 in. pot, planted in 7 in. pots, made up in June, three plants in a 7 in. pot, now as large as a bushel basket, price, \$1.25 to \$1.50 per pot. PIERSONI FERNS, 4 in. pots, 35c.-40c.-50c.; 5-5 1/2-6 in. pots, 75c.-1.00.

AZALEA INDICA. Have an immense stock now planted in 6 in. and 7 in. pots, were grown for us under contract by an Azalea Specialist in Ghent, Belgium. Have only the leading varieties such as, Mme. Van der Cruyssen, (2500 of this well known variety of the finest shape, full of buds), Niobe, Bernard Andrew Allen, Deutsche Perle, Simon Mardner, Empress of India, Prof. Wolters, Apollo, and 1/2 doz. more popular sorts, price, 50c., 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75, \$2.00, \$2.50 each.

SCOTTI FERNS, 5 in. pots, 50c. to 75c.; 7 in. pots, \$1.00 each.

BOSTON FERNS, 8 in. pots, made up of 3 plants, as big as a wash tub, \$1.25 to \$1.50 each; 7 in. pots, 75c. to \$1.00.

each; 6 in. pots, 50c. each; 5 and 5 1/2 in. pots, 30c., 35c. and 40c. each.

FERNS FOR DISHES, 2 1/2 and 3 in. pots, 5c. each.

KENTIA Forsterlanni and Belmoreana, 4 in. pots, 8 to 20 in. high 35c. 5 1/2 in., 5 1/2 in., and 6 in. pots, bushy stocky plants, 60c., 60c., and 75c.

LATANIA Borbonica, 4 in., strong, 25c. each.

COCOS Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

THE CEDAR HILL GARDENS, Sea Cliff, L. I.

DETROIT, MICH.—Late reports just received showed that last week's thaw caused a dangerous flood in the low lying district in Woodmere. At Chas. Warnke's place they worked all night to keep the water from flooding the fire-box. A Steinke & Son had to call the assistance of a fire engine to pump the water from the firing pit. Many others in this section toward Grosse Pointe, had a hard night keeping the water from the boilers. Car service between Detroit and Grosse Pointe was suspended, on account of the flood, which made the usual Sunday morning delivery to the fashionable customers at the latter place very irksome. F. D.

Washington, D. C.
News Notes.

This city has experienced many kinds of weather the past week, including torrential rains and a flood which still prevails in the Potomac. The thermometer rose steadily from close proximity to zero, and for several days fire heat was an annoyance. There was a good deal of business done in all branches of the trade and a brisk demand with some of the market stands for funeral work.

On Thursday night one of the boiler houses of the American Rose Company on Bladensburg road was completely destroyed by fire, but fortunately the large steam boiler was not seriously injured. About 30 feet of the 240-foot house of carnation Helen Gould, which connected directly with the boiler house, was badly damaged by fire and smoke, and some 25 or 30 boxes of glass were broken. The total loss is estimated at \$1,000. It is not known how the fire originated.

We learn with regret that John Clark, owing to some difficulties encountered with his heating system, has had a setback in the dissemination of his new red rose, a few flowers of which were shown and widely admired at the convention of the American Rose Society, held here last March.

Bowling Notes.

The ladies' auxiliary of the bowling team of the Florists' Club of Washington rolled four games on February 13, with the following results:
Mrs. Geo. Cooke, 59 56 67 93
Mrs. Siddens, 116 80 105 132
Miss Cooke, 70 99 75 100
Mrs. McCauley, 111 119 95 123
Mrs. Shafter, 153 100 101 80
This team is distinguishing itself among local female bowlers.
JAS. L. CARBERY.

Exhibitions.

ST. LOUIS, MO. The Rules and Prizes for the second Spring exhibition of the St. Louis Horticultural Society have been issued by Secretary Otto Koenig. The show will be held in the Grand Avenue Masonic Temple, Grand and Finney avenues on March 10, 11 and 12, day and evening. Competition is open to all.

Boston. The Week's News. John Dunbar, assistant superintendent of parks, Rochester, N. Y., was the speaker at the weekly meeting of the Massachusetts Horticultural Society on Saturday. His subject was "Hardy Conifers for Private Estates," and as Mr. Dunbar has had a wide experience among these trees he handled it in a very able manner. There was a good attendance and a lively discussion followed. There will be no meeting at Horticultural Hall to-day (Saturday) on account of Washington's Birthday, but next week the speaker will be Robert Craig of Philadelphia, his subject being "The Private Gardener."

Carnation growers who have a surplus of young plants should advertise them in THE FLORISTS EXCHANGE.

MADISON, WIS. The Wisconsin State Horticultural Society passed a resolution requesting that a bill be introduced into the next Legislature to establish a chair of plant pathology at the Wisconsin University. Another resolution was adopted, instructing the secretary to tender the congratulations of the society to P. K. Phoenix of Delavan, one of the pioneer nurserymen and fruit growers of Wisconsin, on the event of his eighty-third birthday.

LOUISA, VA.—The violet raisers of Louisa have had great trouble with aphids and other parasites on their plants, and the quality of the flowers is much injured and quantity nothing like so abundant as last season. Many of the growers are abandoning the industry.

NEW BEDFORD, MASS.—At a recent meeting of the Horticultural Society H. A. Jahn was awarded a silver medal for his new white carnation Lloyd. The society voted to hold a flower show in September next, the date of which will be announced later.

During the last cold snap one of the greenhouses of Wm. E. Mosher was badly frozen; he reports his loss well up in the hundreds. The house contained carnations, azaleas, etc. Horrico.

Club News. There was a well attended meeting of the Chicago Florists' Club at Handel Hall on Thursday evening, February 13. President Leonard Kill presided. The report of the committee having in charge the procuring of quarters for the forthcoming exhibition and meeting of the American Rose Society in Chicago was received. The committee has secured the use of Blackstone Hall for the exhibition, and Fullerton Hall for the meetings, both in the Art Institute. Arrangements have been made for the admission of the public to the exhibition, both on the free day, and following days, and for the equitable disposition of the admission receipts when the Institute is not open to the public. The president announced his standing committees as follows: Finance—H. N. Bruns, chairman, Wm. Kidwell, George Asmus; transportation—F. E. Bentley, chairman; sports and pastimes—P. C. Schupp, chairman, George Asmus; good of the club—T. E. Waters, chairman, Ed. Emders, H. B. Howard. The following were nominated for membership: John Kruchten, John Schills, J. H. Pepper, Herman Schiller and H. C. Lenington, of Chicago, and L. G. Hening, of Blue Island. A motion that the sum of \$15 be placed in the hands of the Good of the Club committee for purposes of enter-

tainment at the next meeting was carried. Fritz Bahr, Highland Park, Ill., exhibited a fine vase of Lucille, a new seedling carnation, the result of a cross between White Cloud and a seedling of Prosperity. It is a beautiful white with a shell pink center, large flowers, with good stem and foliage. The president appointed Jas. S. Wilson, Andrew Benson, and W. J. Palinsky a jury of award, and after examination they scored the variety 85 points and recommended the certificate of the club. A motion was made and carried that the president appoint a committee of three to arrange for the entertainment of the officers and visiting members of the American Rose Society. August Poehlmann, who is the society's accredited representative, will act as the exhibition manager. News Items. Weiland & Risch have secured a tract of land adjoining the site of their greenhouses at Evanston, and are planning to erect a new range of greenhouses on the same soon after Spring. H. F. Halle is erecting a 25-foot conservatory at the rear of his Sheridan road store. Wm. Breitmeyer, Detroit, was in town on Monday, en route to the Springfield convention. J. H. PEARL. DENVER, COLO.—J. A. Valentine is on a trip to California.

Cincinnati.

News Notes.

We were in hopes that our city would escape a flood this February, but such does not seem to be the case. Valentine's Day, February 14, was the rainiest kind of a rainy day, and to-day, February 15, all small streams are out of their banks and churning toward the great Ohio at about ten miles an hour. The truck gardeners and some of the florists in Millerock Valley will be heavy losers, to say nothing of losses to families living in these immediate parts. Loss, distress and misery always go with these floods, and people living high and dry who have never seen them, have no conception of what they are like.

It rained all day St. Valentine's Day, but the retail florists never did more business for this occasion. The men were the buyers, and as all the men have at least one sweetheart, that sweetheart was not forgotten. The wholesale trade was only fair and all of us could have done better. Our stocks were quite large, and many carnations and violets were carried over. Carnations have surely been "it" as regards quantity this week; as Spring draws nigh we shall probably see more of them, for, with all our experts trying to teach the carnation new things, it is a Spring bloomer and always will be; but, with all that, it is the divine flower and graces all occasions, even if we have to sell it at job lot prices at times. But the queen of flowers—the rose—meets no better fate at times.

Our gripe subjects are all improving. J. A. Peterson is able to attend to business once more. R. P. Critchell is also on the mend, but he finds it difficult to use his feet—they are not mates at the present time.

C. J. Ohmer has opened a wire-work factory at 113 East Third street, with office at 114 East Third street. He has a large force of skilled workmen and is prepared to handle any kind of an order on short notice. Give him a trial and see. The firm name is Florists' Wire Design Company. We now have three wire-work shops—R. A. Betz, Frank Ball and the above.

I am in receipt of a souvenir album from Atlanta, Ga., compliments of Dr. Frank R. Howald. Atlanta is one of the busiest and handsomest cities in the South and the florist business is active there. The Atlanta Floral Company, of which Dr. Howald is the owner, does an exceptionally fine business, and grows the greater part of its flowers.

James Allan, of George & Allan, left for Boston Sunday evening, being called there by the death of his father.

C. J. Ohmer is home for a few days with a case of tonsillitis.

Later reports from up the river districts are very discouraging. The Ohio is rising fast and will pass the danger line before Tuesday, the 18th. At Cincinnati fifty feet causes all merchants in the bottoms to move. The truck gardeners, who at this writing, the 17th inst., are out of water, are removing all their holdups to places of safety, but the loss and suffering will be great. The weather this morning is favorable, but future reports are for rain and snow. E. G. G.

Baltimore.

News and Trade Notes.

There is an overabundance of good carnations and they have been, and are yet, a glut on the market. There is also an increase in surplus stock in almost everything but roses. Quantities of cut flowers were given to hospitals during the past week.

Major Richard M. Venable has resigned from the park board on account of ill health; in all probability ex-Mayor General Ferdinand C. LaTrobe, one of the present park commissioners will be selected as the next president of the board. Both Mayor Mahool and General LaTrobe are advocates of the Greater Baltimore Park System in accordance with the designs and suggestions of the Olmsted Brothers.

At the last meeting of the Florists and Gardeners' Club, the members discussed the advisability of holding a Spring show, but little enthusiasm was manifested. The committee is about to drop the idea of holding and maintaining a show during the National Sculpture Exposition, unless more encouragement is accorded the proposition. C. L. S.

News of the Week.

One hears these days quite a little talk on the subject of the cut flower supply of this city. The question arises quite often as to whether the increase in glass area has not been larger of late years than the augmentation in the demand for cut flowers would warrant. Taking the present season as a basis, there is no doubt whatever that the supply of cut flowers is in excess of the needs of the city, and such a thing as a general clean-up seems to be an utter impossibility. Of course, there are a great many flowers coming to the New York market this season that would not be here if business throughout the surrounding territory was normal. Many growers who in ordinary seasons find a good local trade that uses up most of their products, are this season sending their flowers here for the simple reason that their local trade does not materialize; they have to get rid of their products to the best advantage, and the New York wholesale market is the one that offers that opportunity, though it cannot be said to be a very good one this year at least.

It is with profound regret that we chronicle the death of William McManus, father of the well-known wholesale florist, James McManus, 42 West Twenty-eighth street. Mr. McManus was taken suddenly ill with bronchial pneumonia on Tuesday, February 11, and died on Friday morning, February 14, interment being in Calvary Cemetery on Sunday, February 16. Mr. McManus was born in County Cavao, Ireland, sixty-eight years ago and came to this country when a young man. In 1861 he enlisted in the United States Army and went through the Civil War. He leaves a widow, who at present is too ill to be informed of her husband's death, and two sons.

We have also to record the death of a well-known character in New York florist trade circles; namely, James Daly, better known to his many acquaintances as "Jimmie Roan," who died at his home, 419 East Seventeenth street, Friday morning, February 14, interment being in Calvary Cemetery on Monday, February 17. Mr. Daly had worked for James Weir's Sons, the Brooklyn florists, for over twenty-five years, and, with John Weir, had attended the flower markets almost daily during the whole of that period. At the time of his death he was forty-three years of age. He leaves a widow and two children.

John T. Withers will shortly leave for Minneapolis, Minn., where he will deliver a series of lectures on economic forestry, shade trees, etc. Mr. Withers calls attention to a slip in our report of his lecture before the New York Florists' Club. He does not recommend the

beech as a street tree, but it is very suitable for lawns and small parks.

The Huntington Horticultural and Agricultural Society will hold its annual carnation exhibition on Tuesday, February 25, in the large school building, Huntington, L. I.

It is generally supposed that the beautiful Magnolia grandiflora, or, as it is called in Washington where it is planted so extensively, the hull bay, is not hardy in New York State, but we recently saw a specimen growing in Brooklyn that would seem to contradict the general impression relative to its hardiness. The tree referred to stands in front of the residence of Wm. Lemken, 679 Lafayette avenue, Brooklyn, and is a most beautiful specimen. At the present time it is some thirty feet high, with a trunk diameter of about five inches. It is of pyramidal shape and very symmetrical; in fact, a more perfect specimen we would not wish to look upon. The plant was brought from the South eighteen years ago and is planted directly in front of the house, having a full Southern exposure. It flowers every year; last season it carried twenty-five beautiful clusters. It would be interesting to know if there are any more specimens of this Southern favorite grown in near proximity to New York City.

Samuel B. Parsons, Jr., landscape engineer for the Park Department of New York City, has been invited as one of the speakers at the annual dinner of the New York Florists' Club, which will be held in the St. Denis Hotel next Saturday evening, February 29. Mr. Sheridan says the outlook for a gratifying attendance at the dinner is very bright. A most enjoyable time is assured, and all who intend being present should secure their tickets at the earliest opportunity.

The A. J. Fellouris Company has been incorporated with a capital stock of \$5,000. Directors, Antonio J. Fellouris, 245 East Thirtieth street; Spiro J. Loupy, 233 West 107th street, New York; Gabriel G. Malhami, 452 Fifteenth street, Brooklyn.

Buffalo, N. Y.

Club Notes.

The Florists' Club last week held a most enthusiastic meeting at the hall of Wm. F. Kastig; it was presided over by President Louis H. Neubeck. Twenty new applications for membership were received and accepted. The nomination of officers for the ensuing year resulted as follows: President, Charles Sandiford and Charles Reichert; vice-president, David Scott and George E. McClure; financial secretary, Emil Bruecker; treasurer, Wallace Eiss. The election will take place March 6 at Kastig's hall, 383 Ellicott street. Messrs. Cloudsley, Higgins and Grever are on the entertainment committee, and are making arrangements for the election banquet and entertainment on that night; they promise a good time for all.

Trade News.

St. Valentine's Day trade was the best in years. Violets were all sold out by noon; many of the dealers were caught unprepared for so large a demand for this flower, which is becoming more popular every year as a valentine gift.

Now that the members of the Florists' Club have awakened, things are expected to hum in the social line. Several of the members have suggested a progressive potra party to be held at Kastig's hall. He has offered the use of the hall gratis to the members for a social, which we are sure will be attended by a large crowd of florists. This will also give the ladies a good opportunity to become acquainted.

GLEN COVE, N. Y.—The Nassau County Horticultural Society held its regular monthly meeting February 12 at the Oriental Hotel. There was a large attendance. One new member was elected. In the competition for points the awards were as follows: S. J. Trepass for Cattleya Triana 89; H. F. Mayer, carnations, 84; Valentine Clereze, narcissus, 83.

Henry Matz tendered his resignation as treasurer of the society, as he intends going into business in Connecticut. He was given a vote of thanks for his services. E. J. Brown was elected unanimously to fill the vacancy. G. M. K.

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

St. Louis. News Notes.

We had with us the past week the following traveling salesmen: A. Hans of Ghent, Belgium, selling palms, azaleas, bay trees and araucarias; Joseph Rülker of August Rülker & Sons, New York, looking after bulb orders; and Mr. Lempe, representing W. W. Barnard Company, Chicago, selling seeds, bulbs and taking advance orders for their famous holly.

John Steidle lost his big smokestack in last week's storm. Luckily it fell just right and no other damage resulted. He reported at the club meeting that all repairs had been made.

Harry Young's many friends in the trade will be pleased to learn that his title is now "grandpa"—the first in the family, so Harry says.

Charles Young, son of James Young, president of the C. Young & Sons Company, has selected Washington's Birthday for his wedding day. He will, on that day, lead to the altar Miss Katherine Courtney. Our best wishes are with the young couple.

Francis Fillmore and Carey Sanders, two of our oldest florists in the city, attended the club meeting last Thursday. Both are over eighty years of age and are enjoying the best of health.

William F. Adles, well known among the local trade and for many years with M. M. Ayers Floral Company on Grand avenue, died last week Tuesday after a short illness. The funeral took place Thursday afternoon from his mother's residence. He leaves a widow and child. Mr. Adles was formerly a member of the Florists' Club and of the Florists' Bowling Club. Quite a few in the trade attended the funeral.

C. C. Sanders, who was recently elected chairman of the executive committee of the St. Louis Horticultural Society, reports that the Spring flower show will be a much larger affair than last year. An admission of 25c. will be charged this year. Should the attendance be as large as last Spring, the show will be a great financial success.

Fred. Ammann of Edwardsville, in a speech at the Florists' Club last Thursday, invited all the members to attend the third annual meeting of the Illinois State Florists' Association, which takes place February 18 and 19 at Springfield. Ex-President H. C. Irish of the local club will read a paper on "Summer Bedding" during the afternoon. Twenty members were on his list to make the trip. W. N. Radd, E. G. Hill, G. A. Kuhl, W. C. Brown, A. T. Hey and A. C. Beal are all down for addresses. A good time is anticipated.

Club Meeting. The Florists' Club held its regular yearly carnation meeting on Thursday afternoon, and it proved to be the largest in point of attendance the club has ever had. Secretary Bentzen reported that, including the visitors, over fifty were present. The local carnation growers outdid themselves in making exhibits and in the quality of the blooms they staged; better displays were never before seen at any of our carnation meetings.

Among those who exhibited new varieties were The Chicago Carnation Company, Joliet, Ill., a large vase of Andrew Carnegie; Richard Witterstaetter, Cincinnati, O., a grand vase of Afterglow; Stevenson Brothers, Govanstown, Baltimore, Md., a splendid vase of Splendor; and the St. Clair Floral Company, Belleville, Ill., a vase of their new pink seedling No. 20, a cross between Mrs. T. W. Lawson and Mrs. E. A. Nelson. Those, of course, were the center of attraction. Of our local carnation growers, who were out in full force, among those who exhibited standard varieties for prizes were James W. Dunford, Clayton, one vase each of Aristocrat, Rose Pink Enchantress, White Perfection and Enchantress; Pierre Schneider, Kirkwood, one vase each of Lady Bountiful, Mrs. T. W. Lawson, Enchantress and Rose Pink Enchantress; J. W. Pilscher, Kirkwood, a fine vase of Beacon; Henry Johan, Collinsville, a vase of well-grown Aristocrat; Chas. Beyer, vase of Enchantress; J. F. Ammann, Edwardsville, one large vase of mixed varieties; E. W. Guy, Belleville, vase each of Lady Bountiful and Rose Pink Enchantress; and John Steidle, two large vases of mixed varieties.

The meeting was promptly opened by President Young, with all his assistants present. The Pottery Committee reported through Chairman Sanders that \$2,000 had been subscribed to date, and that

Tobacco Paper "NICO-FUME" LIQUID. Over 40% Nicotine. By far the CHEAPEST. Just Note Prices! Pint \$1.50 1/2 Gallon 5.50 Gallon 10.50 5 Gallons 47.25

they would report at each meeting until the time expired in May. The club's trustees reported that the club had to look for new meeting rooms, as the present building was to be closed for repairs in May. They were instructed to look for new quarters and report at the next meeting. The treasurer was instructed to pay the first 20 per cent. call on the subscription for the National Flower Show. A letter was received from the secretary of the St. Louis Horticultural Society asking the support of the members for its Spring flower show, to be held next month; this was referred to the trustees, who will act on the matter. On motion, the club's yearly rose meeting will be held March 12, at which growers of new varieties will be asked to make exhibits. President Young appointed F. W. Ide, A. J. Bentzen and F. J. Fillmore as judges of the flowers on display; they reported as follows: Best Rose Pink Enchantress, J. W. Dunford, first; E. W. Guy, second. Best vase white, J. W. Dunford, first with White Perfection; Pierre Schneider, second with Lady Bountiful; E. W. Guy also with Lady Bountiful. Red, W. J. Pilscher, Aristocrat, J. W. Dunford, first; Henry Johan, second. Mrs. T. W. Lawson, Pierre Schneider, Enchantress, J. W. Dunford, first; Pierre Schneider, second, and Charles Beyer, third. In the mixed vases, which contained very fine quality blooms, J. F. Ammann was first; John Steidle, second and third. Of the new varieties on exhibition Witterstaetter's Afterglow received the club's certificate of merit; Splendor, Andrew Carnegie and Seedling No. 20, honorable mention.

The question box contained inquiries, nearly all of which pertained to carnations. After adjournment supper was served at which forty were seated. Next month the rose meeting will be followed by a similar event. ST. PATRICK.

Kalamazoo.

News Items. For cold and storms the present month creates a record for this Winter and several others past likewise. In fact thus far storm has succeeded storm, the intervals being zero temperature and as low as 19 below zero being reached on the morning of the 8th.

Funeral work has been extremely brisk and a fair amount of shipping trade is done, so it is not quite as bad as it might be. Lincoln's Birthday and St. Valentine's Day also brought some extra demand, the latter especially being marked. Stock increases in quantity a little each week, but not sufficiently to reduce values perceptibly. Violets are, however, in abundance and cheap, so that a great many are disposed of daily.

G. Van Bochove & Brother are figuring for the erection of another addition to their Rose Hill plant the coming season. James Fraser at Mountain Home Cemetery reports business as averaging up pretty fair so far, and is preparing for a big bedding plant trade this Spring.

The Central Nursery Company is cutting sweet peas and violets of fine quality which sell readily at sight. The firm also reports orders for nursery stock, etc., in excess of last year.

Mr. Krill of the Prudential Nursery Company likewise reports the nursery business brisk. S. B.

Detroit.

Trade Notes. Business is considerably improved with steady prices at wholesale and retail. A good deal of funeral work and several large banquets helped to make the stock move more lively. The visit of Secretary Taft also called for a considerable lot of flowers.

Valentine's Day, while anything but propitious for buyers from the weather point of view, exerted its old-time influence and helped us to dispose of many floral gifts. Spring flowers and violets were first in line.

Chas. Warnke, Woodmere, broke his leg on February 5, but is now slowly on the way to recovery. FRANK DANZER.

FREEWATER, ORE.—A horticultural society has been permanently organized here and will be called the Milton-Freewater Horticultural Society. Following are the officers elected: President, T. L. Ragsdale; vice-president, C. E. Simons; secretary, D. C. Sanderson; treasurer, W. Forsythe; directors, A. Tanke, E. P. Jensen and Howard Evans. A series of meetings is to be held in the near future in Milton, Tum-a-Lum grange, Ferndale and Bienville hall, in the interests of horticultural education.

Will INCREASE the CAPACITY of YOUR WATER SUPPLY SYSTEM

BECAUSE YOU CAN GET MORE PRESSURE AND DO BETTER WORK IN LESS TIME

Let us take care of you **NOW**, so that the lengthening days will find you ready to take advantage of the growing sunshine. **The Standard Pumping Engine is designed for Greenhouse use**—is used and endorsed by Florists in all parts of the country. There is nothing cheap about them and we sell you **Guaranteed Results**. Send for catalogue and then put your water supply in perfect order by installing a Standard Pumping Engine.

THE STANDARD PUMP & ENGINE CO., 14 Michigan Street, CLEVELAND, OHIO.

New Dunning Boiler—Sectional View

We Invite Investigation

because the more you investigate the more you will be convinced that

In Your Greenhouse the boiler that will give you the best heating results, with the least fuel expense, is the

NEW DUNNING BOILER

The ample fire box with high crown sheet provides complete intermingling of air with gas, and combustion of the mixture at high temperature of every heat unit by water before it passes up flue. The smoke-pipe of a **New Dunning is never hot.**

No shoulders or obstructions to collect sediment. No tubes to gather soot. Free circulation in every part. Portable or made to set in brick. Made of Siemens-Martin wrought steel, hot-rolled plates. Tested by severest known tests and guaranteed in every particular. Easy to clean, simple to operate, nothing to get out of order, inexpensive to keep up.

The United States Government has used **DUNNING BOILERS** for Thirty Years. Write for 38th Edition Free Illustrated Catalogue, With Prices.

NEW YORK CENTRAL IRON WORKS CO., Geneva, New York

TILE DRAINED LAND IS MORE PRODUCTIVE

ROUND TILE

Earliest and easiest worked. Carries off surplus water; admits air to the soil. In Jackson's Round Drain Tile meets every requirement. We also make Sewer Pipe, Red and Fire Brick, Chimney Tops, Encaustic Side Walk Tile, etc. Write for what you want and prices. JOHN H. JACKSON, 50 Third Ave., Albany, N. Y.

REDLANDS, CAL.—George G. Southard, a nurseryman, has decided to establish in the city a nursery for growing Luther Burbank's spineless cactus. Mr. Southard has made a study of the thornless cactus and has been conferring with Mr. Burbank on the subject. He believes that from the showing the cactus has been making in recent years the plant will in a few more years become one of the leading food products for cattle and other stock and that there will be a demand for the plants for use on the desert.

HORTICULTURAL ARCHITECT AND BUILDER
WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.
Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.
(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)
And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.
And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 9

NEW YORK AND CHICAGO, FEBRUARY 29, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be **THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION**, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productivity. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress the best all-round white carnation, on account of its large size, long stem, earliness, and productivity. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price.
F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,
BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also
VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.
VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.
We can supply, also,
WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Vaughan's Asparagus Plumosus Nanus Seed

100 seeds 60c.; 250 seeds \$1.25; 500 seeds \$2.25; 1,000 seeds \$4.00; 5,000 seeds \$19.25; 10,000 seeds \$37.50.

THINKING

of new effects for your Easter sales? Let us help you. Nothing makes Flowers so attractive as the big ribbon bow of some perfect blend or startling contrast. The new shades of ribbon now weaving on our looms are wonderfully attractive. The Coral and Geranium shades—the Mountain Rose and American Beauty colors—the golden and melon tints—the foliage hues—these are colorings not heretofore used, but which combine exquisitely with flowers and plants. We weave these colors in our many standard grades. Satin, Taffeta, Messaline, etc.

The prices are no higher than our regular qualities, and these, as you know, are lower in price than what these ribbons are sold for elsewhere, for you buy direct from the mill and

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Durycia, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

A bill has been introduced into the Maryland State Legislature providing for the inspection of seeds. It was offered by Mr. Duvall of Anne Arundel County.

Import of Seed.—February 18.—J. M. Thorburn & Company, eight packages seed; H. Nungesser & Company, 43 bags grass seed; Rickards Brothers, 21 bags grass seed; W. E. Marshall & Company, 16 bags grass seed; McIntosh & Company, 123 packages plants; H. F. Darrow, 14 cases plants; F. B. Vandegrift & Company, 19 packages seed, etc. February 19.—Peter Henderson & Company, one case seed. February 20.—Peter Henderson & Company, 27 packages seed; W. R. Huntington, three boxes bulbs; G. W. Sheldon & Company, 19 packages plants; J. M. Thorburn & Company, 20 packages seed; H. Frank Darrow, 81 packages lily of the valley pips; Peter Henderson & Company, two packages flower seed; J. W. McCullough's Sons, six bags seed; F. G. Mills, one case seed; H. Phillips Seed Company, one case seed; S. Stern, eight cases lily of the valley pips.

THE IOWA PURE SEED LAW.—This law went into effect July 4, 1907. The following information regarding same is furnished for the guidance of all concerned:
"This law, which is quite stringent, forbids the sale, or offering for sale, of any agricultural seeds that are below a certain high standard of purity and germination, and places a heavy penalty on any one selling it, if it contains certain weed seeds. The exact per cent. of impurities contained in said seeds must be stated on the outside of the bag, with each sale of one pound or more. The law applies to all kinds of clover, grass seed, and farm seeds, including seed corn, oats, wheat, cane, etc. It names seven varieties of weed seeds that are absolutely forbidden to be contained in any seeds and also mentions fourteen other weed seeds, which are permitted only in small amounts; the total of all of these combined must not amount to more than 2 per cent. Seeds sold must be up to a high standard of purity. In

ARTHUR COWEE, Gladiolus Specialist, MEADOWVALE FARM BERLIN, N. Y.

some cases the law calls for 99 per cent. purity and 94 per cent. vitality, so that low grade seeds will hereafter be practically unsalable. In some varieties of seeds, if there is more than 5 per cent. of other seeds mixed with them, they are deemed to be adulterated and their sale is forbidden.

It seems to be the opinion of some that the law applies only to seed dealers, but this is not the case, as seeds sold by country merchants and farmers will have to stand the test of the law, and if an inspector finds seed being sold which does not come up to grade or comply with the requirements, the party selling the seeds is subject to a fine of \$100, no matter if the seed was of his own growing, unless it is sold to some person who comes to the farm where the seed was grown, and purchases it there. A farmer cannot deliver it to a neighbor unless it conforms to the law, nor ship it out by freight to any one in Iowa except to a dealer in seeds who will be obliged to reclean it before selling it.

Hon. H. R. Wright, the State food and dairy inspector, of Des Moines, is charged with the enforcement of the law, and he has six inspectors traveling over the State, whose duty it is to see that the law is strictly enforced.

BELLINGHAM, WASH.—The enterprising citizens of Bellingham have undertaken the work of securing a permanent government bulb farm for that city. They have interested farmers and business men in the proposition, and raised sufficient funds for purchasing a site for the new industry. That was done at the suggestion of representatives of the Department of Agriculture at Washington, and was considered a donation for the establishment of the farm. Different sites have been examined by experts, and pronounced not suitable for the purpose. With that report the work has been temporarily dropped, and there is considerable dissatisfaction among the people giving money and time to the enterprise. Bellingham has long ago demonstrated its possibilities as a place for growing various commercial bulbs. For years an experimental garden has been kept up at great expense, and the results have been highly satisfactory. The bulb producing work has passed beyond the experimental stage. It has been shown that superior bulbs, such as florists annually import from Holland, can be grown in Whatcom County. There is a combination of soil and climate that insures success. The transportation facilities are all that could be desired.—Seattle Post-Intelligencer.

THE ADULTERATION AND MISBRANDING OF AGRICULTURAL SEEDS.—The United States Department of Agriculture has issued Circular No. 26 concerning the adulteration and misbranding of alfalfa, red clover, and grass seeds, wherein the names of firms and individuals who have supplied the Department with adulterated seed are published, together with the percentages of the various adulterant materials in each instance.

In the case of red clover 1,217 samples were secured in the open market of which 405, or one-third, contained seed of dodder, 424 contained traces of yellow trefoil seed, and 155 bore evidence of having originated in Chili. The highest percentage of adulterants found in red clover seed was 27.27, the foreign materials being green foxtail and German millet. Burkhorn was also present in some samples.

Of 330 samples of alfalfa seed secured, 191, or about one-half, contained seed of dodder, 135 contained a trace of yellow trefoil seed, 120 contained a trace of sweet clover seed, and 16 contained a trace of bur clover seed. The highest percentage of adulterant (yellow trefoil) in alfalfa was 11.29.

With respect to meadow fescue seed, of the 64 samples obtained, 20 contained chaff in amounts varying from a trace to more than 19 per cent., 4 contained seed of rye-grass, 4 were misbranded, being Canada blue-grass, 1 was misbranded, being orchard grass, and another was misbranded, being a mixture of orchard grass and fescue.

Of the 55 samples of *Bromus inermis* seed obtained, 15 contained seed of cheat, or chess, 28 contained from 2 to 3 per cent. of seed of the wheat-grasses, several contained seed of meadow fescue, and one contained more than 24 per cent. of meadow fescue and rye-grass seed together.

Of the 129 samples of Kentucky blue-grass seed obtained, only 8 were found to be free from any trace of Canada blue-

grass. In most of these samples the trace of Canada blue-grass found was immature seed, showing that it was harvested with the Kentucky blue-grass seed. The seeds of the two plants not ripening at the same time, it is improbable that mature seed of Canada blue-grass would be harvested with Kentucky blue-grass seed. In 110 samples, however, Canada blue-grass seed was found in quantities exceeding 5 per cent., 32 of these being Canada blue-grass seed misbranded as Kentucky blue-grass seed.

It is worthy of note that among the names listed are those of several well-known seed houses. The circular adds: "As has been previously stated in these publications, this Department will examine and report promptly as to the presence of adulterants and dodder in any samples of seed submitted for that purpose." This opportunity should be more taken advantage of than it evidently is; then, probably, the long list of names published as supplying adulterated seed would be considerably curtailed, and public censure and condemnation thereby greatly avoided.

Seed Trade Notes.

As regards the mail-trade, it is about the same as during the last weeks of January. The wholesale orders to the larger houses are in good volume, and the best feature of the seed business of the week.

There would seem to be a very general stiffening of contract seed rates for crops to be planted the coming season; this is very apparent from the fact that while the growers are very generally calling upon their trade, as is usual at this season, they (the growers) are not forcing matters with low prices. One reason for this would most assuredly seem to be that a general feeling pervades everyone interested in seeds that the average prevailing rates obtained for some years past have been entirely too low. Another reason why seed contracts for 1906 sales are not being forced is the fact that almost all our growers have sold more or less heavily from their reserve seed planting stocks at the present attractive high rates. The growers therefore feel that to take care of their regular trade will be about all they can comfortably do, without pushing for many extra orders.

As has been expected would be the case, many varieties of seeds are already running low, or entirely sold out with many seedsmen. I refer to such things as Country Gentleman sweet corn, Chinese giant pepper, Southport white globe onion, several varieties of lettuce, and a few other items in both the vegetable and flower seed lists. We shall be obliged to push the sales of other standard sorts; there is a total quantity of seeds among the trade amply sufficient to go around, but a few varieties cannot be expected to stand the whole brunt of the business. V.

European Notes.

It is a cheering sign of a revival of prosperity on your side that quite a rush of contract orders has reached us during the past ten days. The wisely conservative spirit which animated purchasers in making arrangements for 1905 crops is strongly to be commended, but it grieves us to have to turn down the orders emanating from such reliable sources. At the same time we cannot do otherwise so far as biennial crops are concerned.

Since the stock seed for brassicas was put into the ground it has met with nothing but disaster, the result being that the acreage now standing is not more than one-fifth of the average. Even now we do not know that the acreage left standing is safe, for if one severe frost should follow the present warm spell, fully one-half of the acreage would be destroyed. Of course the opening up of the Puget Sound cultures has also helped to diminish our plantings.

Beets also are in very great demand, showing that the heavy surplus of 1904-05 has been worked off. If the plants have kept sound in the silos, a very fair crop may be looked for; but this culture is more or less in peril until harvested. Forage beets, although damaged in some places by frost, are, in general, satisfactory; the warm weather during the past ten days has improved them wonderfully.

The heavy crops of some of the later peas last year (50-60 bushels per acre)

have left a larger surplus than was anticipated. It is probable that the falling market for grain will cause market growers to plant peas once more even at this late date, and in this way the surplus may be reduced to reasonable proportions. At the same time, as the samples are on the whole, good, dealers on your side who supply an early market might find it to their advantage to invest in serviceable varieties.

Visitors to London for the annual meeting of the Royal Horticultural Society were treated to magnificent displays of *Primula sinensis* by Cannell, Sutton and Veitch. It was admitted on all hands that the quality of these exhibits has never been excelled.

Sutton & Sons also made a fine display of potatoes, more than 100 different varieties being staged in perfect condition. One shudders to think what the results would be if some of the labels got mixed.

A most interesting feature of Messrs. Sutton's exhibit was a case containing many varieties of solanums, more or less allied to the useful if humble tuber which adorns the table of rich and poor alike. Some of these promise to be of great commercial value in the near future. A paper on the subject of solanums is to be read by Arthur W. Sutton, V. M. H., at the next meeting of the Linnean Society.

The worthy secretary of the Royal Horticultural Society was justly proud when he reported that his beloved society has now more than 10,000 Fellows on its roll and the cry is, "still they come." EUROPEAN SEEDS.

DREER DAHLIAS

We can still furnish in strong undivided field-grown roots the following varieties of Dahlias. All of these are first-class sorts of their respective types and colors and strictly true to name.

Varieties specially suited for cut flower purposes are marked with an asterisk (*)

CACTUS DAHLIAS

- *Albion. A large, long straight petalled pure white flower with creamy centre of approved form... \$2.50 \$15.00
*Aegir. Rich, warm cardinal-red, with peculiarly twisted petals... 1.00 8.00
*Amos Perry. Flowers very large, with long, tubular petals. Color fiery red, one of the earliest and freest flowering... 2.50 15.00
*Attila. Tender mauve pink on the edges passing to a creamy white centre; a beautiful Dahlia of large size and excellent form... 2.50 15.00
*Alt Heidelberg. Fine orange-scarlet... .85 6.00
*Arachne (The Spider Dahlia). White edged crimson with peculiarly twisted petals; very variable... .85 6.00
*Bessie Mitchell. A fine flower on stiff stems, apricot orange shading to a reddish centre... 1.25 10.00
*Coronation. Glowing red; a medium-sized flower of fine form; splendid for cutting... 2.50 15.00
*Comet. Delicate lilac, pencilled, spotted and striped with tyrian rose... 1.25 10.00
*Carmen Sylva. Soft, rosy-carmine, shading lighter to the centre... 1.25 10.00
*Charm. Centre petals white-edged with pale yellow, the outer petals gradually changing to a light bluish edged with salmon... 1.25 10.00
*Chira G. Stredwick. A splendidly formed flower of very large size, color shrimp pink shading to salmon-red in centre... 1.25 10.00
*Capstan. Soft orange-scarlet, shaded apricot, remarkably free flowering... 1.00 8.00
*Coronopia. Vermillion with carmine shadings, long, narrow petals... 1.00 8.00
*Dainty. Ground color lemon-yellow, shading to a soft, glowing gold rose with tip of yellow; truly dainty... 1.25 10.00
*Else. A charming variety, with a combination of delicate colors. The base of the petals is of buttercup-yellow, gradually passing to amber, finished with a tip of tyrian rose... 2.50 15.00
*Earl of Pembroke. Bright plum color; a royal shade... 1.00 8.00
*Equisite. Fine pure orange-scarlet with salmon shadings... 1.00 8.00
*Firebrand. Rich, glowing vermilion, shading deeper... 1.00 8.00
*F. A. Wellesly. Brilliant blood-red suffused with carmine... 1.25 10.00
*Floradora. A remarkably free-flowering, bright blood red... 1.25 10.00
*Florence M. Stredwick. Pure white, of large size and perfect form... 1.25 10.00
*Fruite. Peaches and cream describes the color of this beauty; a pleasing soft rose-pink passing to a cream centre... 1.25 10.00
*Freigibigkeit. Rich glowing scarlet... .85 6.00
*Frau Hermine Marx. Beautiful La France pink, a fine cut flower... 2.50 15.00
*Flora. An ideal white Cactus Dahlia. A large, heavy flower, produced on stout, stiff stems, makes it valuable for cutting... 2.50 15.00
*Gabriel. Creamy white, edged with vermilion; an improvement on the "Spider Dahlia" Arachne... 1.25 10.00
*Gen. French. A good-sized flower of good form, of a pleasing terra-cotta... 1.25 10.00
*Galliard. Rich, glowing scarlet, with long, tubular petals... 1.00 8.00
*Gellert. Full, double, of fine form; scarlet, shading to ruby at base of petals... 1.00 8.00
*Gen. Buller. Cardinal red, each petal tipped with white... 1.00 8.00
*Gottelinde. Primrose-yellow, of fine form... 1.00 8.00
*Graf Waldersee. Delicate rose suffused with pink... .85 6.00
*Hans Sachs. Bright cherry red... .85 6.00
*Harrow Light. Brilliant cochineal-red, with a stripe of reddish-apricot through the centre of each petal. The coloring is variable, sometimes the light, at others the dark color, predominating, but beautiful in either form... 2.50 15.00
*H. W. Sillem. A brilliant, rich, cardinal-red, with deeper shading, flowers of perfect form, and frequently measuring 7 inches in diameter... 2.50 15.00
*Hohenzollern. Rich bronzy orange-red, with gold sheen... 1.00 8.00
*Horn of Plenty. Deep carmine-purple; flowers large, long, narrow, twisted petals cleft on ends... 1.00 8.00
*Imperator. Large-sized flower of deep currant-red, with deeper shadings... 2.50 15.00
*Island Queen. Soft lavender pink... .85 6.00
*J. Bruyat. Deep yellow at base, passing to pale yellow with reddish streaks... .85 6.00
*J. W. Wilkinson. Rich ruby of fine form... .85 6.00
*J. H. Jackson. Brilliant crimson-maroon; very free... 1.25 10.00
*Kingfisher. Carmine-purple, long, narrow petals and finely formed... 1.25 10.00
*Kriemhilde. The most popular cut flower variety grown to-day; perfect flowers on long stems; color a brilliant pink, gradually shading to white at the centre... 1.00 8.00
*Landrath Dr. Schiff. A most pleasing shade of apricot suffused with rose... 1.00 8.00
*Lauretta. Base of petals deep amber-yellow, passing to apricot and old-rose on the edges; an attractive combination... 2.50 15.00
*Lenau. Ground color coral-red, suffused with apricot, shading to salmon-rose on the edges as the flower matures... 2.50 15.00
*Lady Edmund Falhol. Coral red with rosy shadings... .85 6.00
*Lodestone. Orange-scarlet, large and free... .85 6.00
*Minnie West. Canary-yellow in centre, gradually shading to white at tips; a good, large flower... 2.50 15.00
*Magnificent. A pretty Dahlia, ground color capucine-lake, passing to salmon-rose at the tips... 1.25 10.00
*Mrs. H. L. Brousson. Large, perfect flowers of a delicate tint of salmon on a yellow ground... 1.25 10.00
*Mabel Tulloch. Soft violet-rose with yellow shadings at the base of the petals... 1.25 10.00
*Mary Seret. Apricot, shaded orange, shading to purplish-rose at the tips; a well-formed flower, and a free and continuous bloomer... 1.00 8.00

- Mrs. H. J. Jones. Very large, perfect, rich, bright scarlet with cream-colored edge; occasionally comes self-colored... 1.00 \$8.00
*Mrs. Carter Page. Glowing deep carmine... .85 6.00
*Mrs. Moore. Fine deep clear... .85 6.00
*Mrs. Jowett. Brilliant reddish salmon... .85 6.00
*Oda. Rich crimson-carmine of fine form... 1.00 8.00
*Peace. Free-flowering, pure white... .85 6.00
*Roseine. Glowing crimson with purple shading... .85 6.00
*Reliable. A very large, bold, striking flower, of a pleasing madder-carmine, suffused with salmon and yellow... 2.50 15.00
*Ringdove. Salmon-carmine centre with yellow shadings, passing to white on the edges; very variable, but always pretty... 1.00 8.00
*Ruby. Deep vermilion centre, shading to ruby-red at the edge of the petals; a rich pleasing color... 1.00 8.00
*Ruckert. A superb flower of perfect form, a brilliant blood-red with darker shadings... 1.00 8.00
*Rakete. Rich glowing, fiery-red, of good form... 1.25 10.00
*Standard Bearer. Rich, fiery-scarlet, very free, and of perfect form... 1.25 10.00
*Stern. A beautiful pure lemon yellow, very free and one of the best yellows for cutting... 2.50 15.00
*Shooting Star. (Stern-schnuppe) Good-sized flowers, of regular form, produced on stout stems held well above the foliage. Color pure golden yellow; entirely distinct... 2.50 15.00
*Thuringia. Flowers very large, and always of good form; of a brilliant fiery-red color. A remarkably free bloomer... 2.50 15.00
*Uberfluss. Brilliant geranium red... 1.00 8.00

- *Bon Ton. A beautifully formed flower of fine rich color... 1.00 \$4.00
*Chameleon. Flesh-colored, each shading to coral red; a superb flower... 1.25 10.00
*Duchess of Cambridge. Base of petals white suffused pink, heavily tipped dark crimson... 1.25 10.00
*Emily. Sofferingo, with white markings; very large... 1.25 10.00
*Elegans. Tyrian rose, tipped white... 1.25 10.00
*Fern-Leaved Beauty. White, each petal edged with dark carmine red... 1.25 10.00
*Frank Smith. Intense purplish maroon shading almost to black, each petal tipped with white. The most perfect Cactus Dahlia... 1.25 10.00
*Fanny Furchase. A fine deep yellow... 1.25 10.00
*Grand Duke Alexis. Large, massive flowers, ivory white with a faint tinge of rose at the extremities of the petals... 1.00 8.00
*John Thorpe. Sofferingo rose, of perfect form... 1.25 10.00
*Keystone. Light rose, spotted and striped crimson... 1.25 10.00
*Miss Browning. Primrose yellow tipped with white... 1.25 10.00
*Miss May Loomis. White, suffused with soft rose... 1.25 10.00
*Mrs. Stancumbe. Straw yellow, suffused amber, striped red and mottled, and tipped bluish... 1.25 10.00
*Olympia. Bright rose pink, striped, spotted and pencilled crimson... 1.25 10.00
*Queen Victoria. Handsome bright yellow, beautifully quilled... 1.00 8.00
*Queen of Yellows. Beautiful primrose yellow... 1.25 10.00
*Red Hussar. Pure cardinal red; perfect form... 1.25 10.00
*Red Star. Pure white with faint tint of bluish on edges... 1.00 8.00
*Striped Banner. Cardinal red, striped white... 1.25 10.00
*Thos. Westcott. Fiery red, tipped white; very profuse... 1.25 10.00
One each of the 23 varieties for \$2.50.

NEW PAEONY-FLOWERED DAHLIAS

This new type of Dahlias originated in Holland, and promises to become very popular. The artistic flowers are very large, from 6 to 8 inches across, and are best compared to the semi-double Paeonies in general form. They all flower very freely, and are borne on long, strong stems, making excellent material for cutting, as well as for garden decoration.

- *Germania. Brilliant strawberry red, a very fluffy, artistic flower, standing well above the foliage, producing a very gay effect. 25 cts. each; \$2.50 per doz.
*Glory of Baarn. Very large, loosely arranged flower of soft hortensia-rose color. 35 cts. each; \$3.50 per doz.
*Queen Emma. A magnificent sort that appears almost artificial; it is of a charming shade of mallow or Hollyhock pink, the inner petals banded with gold. 25 cts. each; \$2.50 per doz.
*Queen Wilhelmina. Immense, fluffy flower of pure white with yellow centre. 35 cts. each; \$3.50 per doz.
The set of 4 varieties for \$1.00.

TWELVE CHOICE DOUBLE POM-PON DAHLIAS

- Ailets Imperial. Creamy white, tipped aniline red.
Darkness. Deep velvety maroon.
Elegante. Soft pink, tipped deep pink, reflex light pink.
*Gold Hanchen. Pure primrose yellow.
Kleine Domitea. Orange buff; always in flower.
Little Bessie. Creamy white, quilled petals.
Little Herman. Deep carmine, shaded garnet; tipped white.
Little Naid. White, tipped amaranth red.
Little Prince. Deep currant red, tipped white.
Lou Kramer. Amber, heavily tipped crimson.
Red Piper. Beautiful deep red of fine form.
*Snowdahl. Unquestionably the finest white. 10 cts. each; \$1.00 per dozen; \$8.00 per 100.
The set of 12 varieties for \$1.00.

NEW CENTURY SINGLE DAHLIAS

These magnificent single varieties all originated from the celebrated Twentieth Century offered in this set. They are all of free branching habit, flowering early, profusely and continuously throughout the season, flowers from 4 1/2 to 6 inches across on stems 3 feet long, and when cut keep in good condition for many days.

- *Crimson Century. Rich, deep, velvety crimson, shaded maroon, with rose halo around a yellow disc. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
*Maroon Century. Rich, velvety maroon with yellow disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.
*Pink Century. Delicate soft pink, flower very large. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.
*Scarlet Century. Brilliant scarlet with golden disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.
*Lavender Century. Delicate lilac with light shadings, very pretty. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
*Twentieth Century. Early in the season, intense rosy crimson, shading gradually to almost white on the edges and a light halo around the disc. As the season advances the flowers become lighter, changing to almost pure white, suffused with soft pink; not variegated but blended in the most beautiful manner. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
One each of the 6 varieties for \$1.50.

STANDARD SINGLE DAHLIAS

- *Alba Superba. Fine large white, with a dash of canary yellow at base of petals. 15 cents each; \$1.25 per doz.; \$10.00 per 100.
*Advancement. Fine deep ruby-red with rose halo and yellow centre.
*Ami Barillet. Rich pure garnet, with fine dark foliage.
*Blackbird. Black velvety maroon, with a bright red spot at the base of each petal.
*Fashion. Crimson-maroon with darker shadings.
*Gaillardia. Golden-yellow with a broad red band around a golden disc. 15 cts. ea.; \$1.25 per doz.; \$10.00 per 100.
*Gracie. White, delicately suffused with bluish and a primrose halo around the disc.
*Mrs. Bowman. Sofferingo, a large showy flower.
*Polly Eccles. Pure apricot with yellow shadings, a halo of poppy red surrounding the Indian yellow disc.
*St. George. A pretty primrose yellow of large size. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
*Striking. Deep garnet, each petal with a white spot on the tip.
*Wildfire. Brilliant poppy-scarlet, of large size. Price: Except where noted, 10 cts. each; \$1.00 per doz.; \$8.00 per 100.
One each of the 12 varieties for \$1.25.
We will furnish one each of the 151 varieties here listed, an interesting collection, for \$15.00.

DECORATIVE DAHLIAS

- *Admiral Dewey. A rich French purple; very free. Doz. 1.00 \$8.00
*Black Beauty. Deep velvety maroon, almost black. 1.00 8.00
*Bronze Beauty. Bright coppery orange. 1.00 8.00
* Catherine Dner. Iridescent geranium-red, a favorite at Newport, R. I., where it is used more extensively than any other variety for cutting. 1.00 8.00
*Clifford W. Bruton. A fine bright yellow. 1.00 8.00
*Fire-rain. Cardinal red. A fine cut flower. 1.00 8.00
*Gigantea. A large creamy white. 1.00 8.00
*Henry Patrick. A fine pure white. 1.00 8.00
*Lyndhurst. Rich brilliant cardinal-red; a fine cut flower. 1.00 8.00
*Marchioness of Bute. White tipped with rosy carmine. 1.00 8.00
*Mrs. Roosevelt. Delicate silvery rose. 2.00 15.00
*Olan. Rosy lavender, suffused and overlaid silvery fawn. 1.00 8.00
*Souvenir de Gustave Bonzon. The most sensational Dahlia of the season; a decorative variety of mammoth proportions, which, under ordinary cultivation, will produce flowers 6 inches across, and can be grown to measure full 9 inches. It is of free growth, remarkably profuse-flowering, and pure scarlet in color. 3.50 25.00
*Sylvia. Soft, pleasing mauve-pink, gradually changing to white in the centre; a fine cut flower. 1.00 8.00
*Win. Agnew. Rich dazzling carmine red; a grand flower. 1.00 8.00
*Zulu. Deep maroon with black shadings. One each of the 16 varieties for \$1.75. 1.00 8.00

SHOW AND FANCY DAHLIAS

- *A. D. Livoni. Beautiful clear pink, of perfect form, and very free. 1.00 8.00
*Arabella. Light sulphur yellow, shaded peach-blossom on edges; a fine flower. 1.25 10.00

Street Planting of Oriental Planes.

Florists and gardeners are often asked by customers to plant oriental planes in the street in front of their dwellings. This the planter should endeavor to dissuade their patrons from doing, unless it be on streets of great width. This plane is entirely unsuited for use in such a position. It grows to an immense size, and no system of pruning will ever succeed in keeping it within bounds. It is really a pity to see so many streets of but 30 to 40 feet width lined with these trees, as is so often the case.

Both planes, the oriental and our native one, are alike objectionable for this purpose, though the latter is rarely used, as it is liable to fungous attacks of the foliage.

There are many trees better suited for street planting—the sugar and the Norway, for instance; while one more unsuited than the plane could not be named. The place for the plane is in our parks and public grounds, where wide avenues exist. These avenues, when so planted, are of imposing appearance when the trees are well developed; and the popularity of the tree for this purpose is attested by the very large demand nurserymen find for it.

Myrobalan Plum Hedges.

Myrobalan plum as a hedge plant has not met with the favor with us it has in England. It is common there, we suppose, from the fact that nurserymen advertise it as a specialty, just as our firms do the privet or others of our well-known hedge plants. Aside from evergreen hedges there is not much interest in others. There is far less desire for seclusion here than there is in England. There every place owned by one is sacred to the owner only, and even a sight of the grounds is prevented as far as walls and hedges can do it. With us it is the other way—too much so in fact—for very many places are so open as to appear like a public common. This is what makes the demand for such hedge plants as the myrobalan plum next to nothing in this country.

Another point is, that since the advent of the San José scale all shrubs, trees, and hedge plants that are liable to be attacked by the pest are planted as little as possible, thus excluding the myrobalan plum, the *Pyrus japonica*, the osage orange and like hedge plants. Even farmers are using fewer hedge plants than in former years, none, practically, wire taking their places.

Beautiful flowering shrubs are used a great deal for forming boundary lines—not to serve as a hedge, but for ornamental purposes.

Should Trees Ever be Pruned?

One of our local horticultural societies had recently before it the question of pruning trees, the subject being presented mainly to emphasize the importance of careful pruning from the very start, which would, practically, remove all necessity of heavy pruning in later years. That intelligent pruning at the outset would do this is certain. There must always be some pruning, for let grow as they will many trees, fruit trees for example, will so interlace their branches as to greatly interfere with the well doing of growth and the bearing of good crops of fruit. No matter how small the twig may be that is cut away it is pruning, but it is assuredly better to cut away a twig less than a ¼-inch in diameter than to let it grow until a saw is needed to reduce it. A properly cared for tree never requires heavy pruning when planted where it should be to fit its growth. A shade tree though properly pruned when young will sometimes get beyond a desired height and a cutting back is necessary; but take a fruit tree, for example, and plant it in an orchard, and with good judgment in its shapening when young it should need but very little when it becomes a large tree; and this is where the pruning education of young gardeners is often lacking.

With the question of transplanting trees it is different. There must be pruning done then to make up for the general disturbance of the tree in its removal. Roots are lost; those remaining are bruised and dried often, and the air may be of a character that the branches are calling on the roots—roots that are not ready to respond—for a supply of moisture and all these things call for a reduction of branches to equalize the loss of roots and the shock to the tree in its removal. Those who contend that a tree which requires heavy pruning when of good size is evidence of neglect when young are right.

Propagation of Horse Chestnuts.

Horse chestnuts are among the most beautiful of flowering trees. They are desired by some, but it is by those who have seen them planted in unsuitable places. They need coolness of the soil, such as that of a lawn; and if in a half shaded place, so much the better. Near lakes and other large bodies of water they thrive admirably.

The common species of horse chestnut are easily raised from the nuts, which should be gathered as soon as ripe and sown at once, covered lightly with leaves first, then a light covering of soil, or they may be preserved until Spring by placing them in a box mixed with sand, put in some cool building, or even buried up outdoors until sowing time in Spring.

Varieties have to be propagated by budding or grafting them on the common European horse chestnut, though perhaps our American species would do as well, but better stick to the European if the other has not been tried. Even the beautiful red flowered horse chestnut has to be increased in this way, as it seeds so rarely that dependence on the seed plan for propagation would give but few plants.

A popular way to increase these chestnuts is to pot a lot of seedlings in Spring and graft them under glass in late Summer; or it can be done by

other willows have pretty catkins, but none of them as pretty as those of the *S. caprea*.

To get good stock for grafting, strong plants of this willow are cut down in early Spring; the shoots that succeed the cut down plants will make a height sufficient in one season. These shoots can be allowed to grow as will for the Summer. The grafting is done the following Spring, about the time the buds are showing signs of swelling, which indicates activity of the sap.

Shrubs for Forcing.

The presence of hardy shrubs in flower in collections of indoor plants in the same condition always gives pleasure by their early appearance in bloom as well as by the contrast they afford when in connection with the others. There are quite a number of such shrubs that could be used in addition to *deutzia*, *snowball*, and a few other sorts not now uncommon. In the following list are included the names of many hardy shrubs, all of which could be forced to bring them into flower in late Winter or for Easter time: *Forsythia*, of sorts; *Japanese Judas*, flowering almond, flowering peach, flowering cherry, *Magnolia stellata*, *Daphne Mezereum*, *Pyrus arbutifolia*, *Spiraea Reevesii* and *S. Van Houttei*, *Staphylea colchica*, *Weigelia*, in variety, and *Salix caprea*, the pussy willow. These are not all, for any of the Spring-flowering shrubs would answer, as it takes but a short time to bring them into bloom.

Those who have not tried the forcing of these or any other hardy shrubs would hit the time required to bring them into bloom by remembering the number of days it takes them to do it when outdoors. Take *Magnolia stellata*, for example; it flowers outdoors in four weeks; the *Spiraeas* named require about six weeks, while the Japanese snowball and *Weigelia* take a week or more longer—nearly seven to eight weeks. When under control in a greenhouse a week or two less or more can be given as may be desired, so that, practically, any one of the list desired could be brought into flower as wanted.

By proper pruning as soon as flowering is over these shrubs could be had available for several years; all that is necessary to ensure flowers is to have the plants make a good supply of new shoots every season, and this the pruning brings about.

Cutting down Privets.

Florists as well as nurserymen are interested in all that relates to privets, for in their line of work they find the setting out and caring for hedges of these bushes something often coming before them.

Early Spring is the time to cut back all privets that need it. All hedges that are out of shape, perhaps bare at the base, and single specimens as well should have a cutting back at this time. It is a great merit in privets of all kinds, especially in the Californian, the one used for hedges, that they may be cut down in Spring without any risk whatever, which cannot be said of many other shrubs. The cutting back makes them grow the better and stronger, as they never fail to break afresh even from the oldest branches. A hedge well cared for from the start and free from any mishaps should require no cutting down. When it does, then do the work when Winter closes, cutting the hedge down to about six inches of the ground. A growth of a strength to make shoots many feet in length will result, but this length must not be permitted. The shoots must be pinched off when of about nine inches in length, to cause the side shoots to break, to form a bushy base; and later on still another pinching back, when by the time growth ends in September, there should be a bushy line of green of about two feet in height.

The shapening of the hedge will need attention, too, especially in the second year of growth. The shape which all writers mostly urge is the conical one, or, at least, one in which the lower branches have the most length. This advice is good; at the same time a hedge of a perfectly flat shape, like a wall, answers very well, and in many cases harmonizes nicely with its surroundings.

The best evergreen privet for the Middle States is the well-known ovalifolium, Californian, so-called. It is, in fact, quite evergreen where severe froezings do not catch it. *Hota* and *Regelianum* are also used, and both are considered desirably hardy; *Regelianum* is deservedly popular because of its beautiful drooping style of growth.

To come back to pruning, all privets that are freshly planted should be cut back freely, as recommended for the older hedges and single specimens.

JOSEPH MECHAN.

Nut Notes.

The proceedings of the Jamestown convention of the National Nut Growers' Association will be ready for distribution about April 1.

Owing to the drought, the Texas pecan crop was seriously injured during the past season. The nuts failed to attain their usual size.

The pecan crop of 1907 was less than a fourth of the usual yield. The shortage was general throughout the entire pecan producing belt.

Catkins of Pussy Willow (*Salix caprea*).

Photo by John E. Johnston.

Winter grafting, as so many other trees are. A great many of the choice kinds, such as the double flowered and the red flowered, are increased by budding, the work being done in Summer. When this method is contemplated the stocks should be watched closely previous to budding them, as the growth of the horse chestnut is soon over, and the bark becomes too tight to lift to receive the bud. July would see some of the stocks in condition to receive the buds.

Pussy Willows.

Florists who have sale for cut flowers always like to have something out of the ordinary to place with their goods, and so look with favor on almost any kind of hardy shrub or tree that can be enticed to flower from cut branches. The old pussy willow is one of these. Hardly a person but recollects this harbinger of Spring, as it pushes forth its catkins in the earliest days of the season. Its earliness suggests how easily it can be forced into flower in advance of its outdoor efforts. Cut some shoots of it and place them in a jar of water, setting the jar in a warm, dark place for a week or so, then bringing it into a still warmer place, and very soon the flowers will develop. It takes but about three weeks to bring out the flowers; and they last for several days in good condition.

The pussy willow is often called goat willow as well; its botanical name is *Salix caprea*. It is always used as a stock for grafting the Kilmarnock weeping willow on, the Kilmarnock being a variety of it, in fact. There is no other pussy willow, though

FORMOSA

LILIUM LONGIFLORUM

Ask your dealer for our own special grown stock or write us direct for quotations. Only a limited quantity available for the coming season 1908. Delivery will be made the first part of August.

The bulbs are thoroughly ripened one month before the Bermuda Harrisii and are considered far superior in quality, as they are *entirely free from disease*.

Careful trials were made for two years and were so successful that we imported over 300 cases last season.

Our cases will be marked Y. N. Co.

Arthur T. Boddington
SEEDSMAN
342 W. 14th St., NEW YORK CITY

(41) **Trouble with Adiantum hybridum.**—I send you some fronds of Adiantum hybridum. The plants are scorched-like; some of them very much so, while others are perfectly good. This trouble has been present all Winter. The plants were planted last August from 2 1/2-inch pots on raised benches, using four-fifths soil and one-fifth cow manure and leaf mold. The house is run at from 60 to 64 degrees at night, and 70 to 78 degrees during the day. I fumigate regularly with nicotine paper, and maintain a general moist atmosphere, but never syringe. How soon should the plants have shade? **SUBSCRIBER.**
Penn.

—Without a doubt the trouble with the fronds arises from the fumigating. Ferns for commercial purposes should be grown in a house by themselves, then fumigating will be unnecessary, as they are never troubled with aphids when grown alone. A very light shade will be necessary early in March, and as the sun gets more powerful along toward the end of that month, the shade will need to be given heavy enough to break the sun's rays, and should be maintained all Summer.

(42) **Propagating Columbian Raspberry.** How is the Columbian raspberry propagated? **INQUISITIVE.**
New York.

—This raspberry can easily be propagated from the suckers. Any time in the Fall, after growth has ceased, dig out the suckers and replant them wherever a new plantation is desired.

(43) **To Make a Rust Joint.**—How can I make a good rust joint? **NEW YORK.** **INQUISITIVE.**

—To make a good rust joint, use sal ammoniac one-half pound, sulphur one-quarter pound, iron filings or borings 50 pounds; mix with water to a paste and pack thoroughly.

ROSES

Court Decision on Rose Cuttings.

UNITED STATES v. AMERICAN EXPRESS COMPANY. U. S. Circuit Court of Appeals, Second Circuit, February 11, 1908 (No. 121 suit 1800.)

Rose cuttings that have been put in sand in preparation for shipment, but have never in fact been in soil, are not dutiable as "rose plants" under paragraph 252, tariff act of 1897, but as "cuttings of * * * shrubs, plants, * * * commonly known as nursery or greenhouse stock," under the same paragraph.

APPEAL from the circuit court of the United States for the western district of New York.

[Decision adverse to the Government.] For decision below see T. D. 28206, in which the circuit court affirmed a decision of the Board of United States General Appraisers, reported as Abstract 9655 (T. D. 26997), which had sustained the importers' protest against the assessment of duty by the collector of customs at the port of Buffalo.

The import in dispute consisted of rose cuttings that had been put in sand in preparation for shipment but had never in fact been in soil. The Government contended that the Board and the circuit court had erred in holding them dutiable under the provision in paragraph 252, tariff act of 1897, for "cuttings of * * * shrubs, plants, * * * commonly known as nursery or greenhouse stock," and that they had been properly classified by the collector under the provision in the same paragraph for "rose plants."

Lyman M. Bass, United States Attorney, for the United States.

Before LACOMBE, COXE, and WARD, Circuit Judges.

PER CURIAM: Judgment affirmed.

2-Year-Old Everblooming Roses OWN ROOTS

These are strong, well branched plants. They have been potted for some time and are well equipped with roots. Packing can be done very light and they will carry safely to any part of the country.

Plant Notes.

BORONIAS are charming plants and they possess besides other merits that of being exquisitely fragrant, this fragrance proceeding, in some, from the flowers and, in others, from the leaves. These plants are heartlike in general appearance and like healths succeed only when grown in a cool temperature and in soil composed in the main of fibrous peat. Cuttings of boronias are somewhat slow in rooting; these cuttings should be taken from half ripened wood in February or March and put in pots or pans nearly filled with peat, leaf mold and sand, the pots or pans covered with bell glasses or small glass cases. The cuttings should previously have been well watered, and, later, and for some time be kept shaded from the direct sunlight. The temperature should not exceed 50 degrees. Seeds of boronias germinate quickly and grow into nice plants in a year.

HIBISCUS COOPERII.—Greenhouse plants of easy culture and possessed of useful attributes consisting in particular of bright ornamental foliage are not over numerous. *Hibiscus Cooperii*, an old-time favorite, possesses these qualifications, and they in consequence entitle it to consideration. When this plant is but small the foliage assumes bright and beautiful tints, besides taking on a habit of perfect development by simply retarding its growth, rendering it in that condition very useful for various forms of plant decoration. Cuttings of this hibiscus taken off the tips of the growing branches of old plants will soon root in the propagating bench, with moderate heat. If it is desirable to retain old plants they may be cut back and continued in growth, which will result in nice bushy specimens.

PANAX VICTORIA.—Now when heat is available every kind of plant for which any possible use may be found later should be propagated instead of having to make an attempt at such important work when seriously handicapped by the necessary curtailment of bottom heat later on, if on after-thought it may seem desirable to increase such stock. *Panax Victoria* from small cuttings put in now will before next Fall make handsome plants, rivaling in beauty and grace many kinds of aralias, which they closely resemble and to which they are as closely allied. These cuttings will root in three weeks or less in sand, and when rooted they should be immediately potted into small pots and kept shifted as they grow. If from any cause the plants get lanky and bare of foliage, two or more may in time be placed in one pot in order to improve their appearance, and make them more presentable as decorative subjects.

ASPIDISTRA plants are always in good demand; in fact it may be hard to think of other plants that are at all times considered as good as cash and at the same time continue increasing in value without incurring a proportionate expense in their care and keep. *Aspidistras* are of no value for decorative purposes, at least to my way of thinking, until furnished with at least a dozen good leaves. Old stock plants may now be broken up and every member severed potted up singly into small pots and grown and shifted as their state of growth requires until they attain salable size. All the damaged or very much starved and otherwise badly treated plants should be operated on first, and then if it appears necessary to attack the more serviceable stock it may be as well not to go as hard on them as on the others, for this reason; there may be a call that cannot easily be met for specimen plants before those severely divided amount to much. Then instead of dividing good plants to the last crown, leave of each just enough to insure the making of a nice specimen by next winter, potting into a fairly large pot in good rich soil. When *aspidistras* are large and growing vigorously their leaves will droop over characteristically if given room, but for some purposes it is more desirable that the leaves emphasize elongated features rather than the plant's compact form, and if such long leaves, erect in appearance, are desired, they are more easily obtained by placing the plants closely together on the benches.

ALLAMANDAS when planted in the soil of a greenhouse and trained upon wires yield a most beautiful supply of beautiful yellow flowers which are deservedly popular and much prized by florists because of the striking and singularly brilliant effects they are capable of producing when tastefully and deftly handled.

DREER'S Reliable FLOWER SEEDS

SWEET PEAS For cutting. The kinds which find the readiest sale are those like the following, which have bright, clear, double colors. For complete list see our current Wholesale Catalogue.

Orchid-Flowered Varieties

This type has very large wavy flowers, usually four blossoms on long, stiff stems, and are as easy to grow as the standard sorts.

Countess Spencer (true), a lovely clear Oz pink	1 lb.	1 lb.
Frank Dolby, largest pale lavender	.50	1.75
Gladys Unwin, pale rose-pink, fine	.10	.20 .60
John Juggan, rich salmon rose	.10	.20 .60
Mrs. Alfred Watkins, superb pale pink	.50	1.75
Nora Unwin, a magnificent pure white	.50	1.75
Phyllis Unwin, light rose-carmine, very large	.10	.30 1.00
Orchid-flowered Mixed, many varieties	.10	.30 1.00

Standard Varieties

Blanche Ferry, the popular pink and white	.05	.10	.20
Blanche Ferry, Extra Early; flowers 10 days earlier	.05	.10	.25
Countess of Radnor, delicate lavender	.05	.10	.20
Dorothy Eckford, the best standard pure white	.05	.10	.25
Earliest of All, a very early flowering form of Blanche Ferry	.05	.10	.35
Emily Henderson, a free and early pure white	.05	.10	.20
Flora Norton, a clear sky blue	.05	.10	.25
Hon. Mrs. E. Kenyon, primrose yellow	.05	.10	.25
Janet Scott, a large bright pink	.05	.10	.25
King Edward VII, rich crimson scarlet	.05	.10	.35
Lady Grisel Hamilton, large pale lavender	.05	.10	.25
Lovely, beautiful shell-pink	.05	.10	.25
Miss Willmott, bright orange pink	.05	.10	.25
Mont Blanc, the earliest pure white	.05	.10	.30
Mrs. Walter Wright, deep mauve, fine	.05	.10	.35
Prima Donna, a fine deep pink	.05	.10	.25
Prince of Wales, rich deep rose	.05	.10	.30

BYER BROS., Chambersburg, Pa.

Allamandas are quite easily propagated from cuttings of the green wood; these should be placed in the sand bench in good heat, or placed one in a small pot filled with sand and leaf mold, plunging the pots with the cuttings in the sand in the propagating bench. When the cuttings are rooted, if from the open sand, they should be potted up in good sandy soil and then placed over heat again and kept shaded until established. The young plants should be shifted into larger pots whenever the condition of the roots require it, and the potting material for the plants as they develop should be increased in substance accordingly. When the plants are intended for a trellis or a roof they should not be pinched until they have attained the height where it is requisite to have a number of shoots; but when grown for pot or tub specimens, more particularly A. Williamsii, which is the best for that purpose, they may be pinched at least twice during their first season's growth in order to lay a good foundation for future specimen plants. After the first year allamandas need not be disturbed but once a year, when grown in pots, and then potting should be done just as the buds start to grow, early in Spring, the plants having previously (in January or February) been pruned back to within two or three joints of the old wood. In Winter they require very little water, but when in active growth they should receive an abundant supply, and for that reason sufficient space should be left for water when potting is done. D. M.

GRAFTED ROSES

NOVELTIES
MRS. JARDINE, RHEA REID, QUEEN BEATRICE.
 The above, \$6.00 per doz., 50 plants for \$18.00, \$35.00 per 100.
MY MARYLAND, 50c. each, \$5.00 per doz., \$35.00 per 100.
 On own roots, 2½ in. pots, \$25.00 per 100, \$2.00 per 10; 3 in. pots, \$5.00 per doz.
MRS. POTTER PALMER, \$3.00 per doz., \$17.50 per 100, \$125.00 per 1000.
NEW RAMBLER "NEWPORT FAIRY." For delivery Spring 1908. Well rooted plants in 2½ inch pots \$1.00 each, \$9.00 per dozen, \$50.00 per 100.
STANDARD VARIETIES
 Aurora, Betty, Bon Silene, Bride, Bridesmaid, Enchanter, Etoile de France, Franz Deegen, Gen. McArthur, Golden Gate, Hermosa, Ivory, Kaiserin Augusta Victoria, Kate Moulton, Killarney, La Detroit, Maman Cochet, Marechal Niel, Mme. Abel Chateaux, Mme. THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, Novem-
ber 6 to 15, 1908. William F. Kasting, Buffalo,
N. Y., is chairman of the show committee.

Chairman W. F. Kasting has instructed me to
call a meeting of the National Flower Show Com-
mittee to be held in Chicago, March 26, 1908, at 2.30
p. m. The place of the meeting will be announced
later. This date is during the convention and ex-
hibition of the American Rose Society in Chicago.
Very important business will come before the com-
mittee and each of the chairmen of minor com-
mittees is expected to report. The presence of every
member is earnestly requested.

J. H. BURDETTE,
Secretary Pro. Tem.

J. F. Ammann.

We have pleasure in presenting herewith a portrait
of J. F. Ammann, florist, Edwardsville, Ill., the newly
elected secretary of the Illinois State Florists' Associa-
tion.

Mr. Ammann was the first president of the organiza-
tion. He is also a life member of the S. A. F. O. H.,
and is the vice-president of that society for Southern
Illinois. He is likewise an active member of the St.
Louis Florists' Club.

In a letter Mr. Ammann says: "I want to thank you
on behalf of the association, and also on my own be-
half, for having your representative at our meeting. I
do hope the entire trade appreciate your valued assist-
ance as much as I do." He adds, "I like to work for
our good cause."

The Florists' Exchange is at all times ready and
willing to help you in the cause of horticulture as far
as lies in its power. We thank Mr. Ammann for his
word of recognition, and would like to see every one
in the trade inspired with the helpful spirit which his
letter demonstrates he possesses. If all liked "to work
for our good cause," how much greater would be its
beneficent advancement.

Specialization in the Nursery Business.

A leading nurseryman recently made the statement
that the nursery business is getting so vast that it will
have to be specialized. From which we infer that this
gentleman is of the opinion that it will be more profitable
for newcomers in the business, particularly, to devote
their attention to certain specialties in the nursery line,
rather than attempt to grow a general stock; in fact,
that this business will eventually divide up, just as has
that of the florist, growers devoting their attention to
those plants to which their soil and location are well
adapted, or from the cultivation of which they believe
they see the best financial results obtainable.

The Florists' Exchange has consistently maintained
its nursery department at a high standard in the desire
to interest florists generally and particularly those who
are not dependent on the cities for their business and who
are located in suburban and country sections where they
cater to the entire wants of the population around them;
that it would pay all such to establish a small nursery
from which they could make selections for the very im-
mediate wants of a customer, and which could also be
maintained as a show ground, so that customers might
see the material for themselves at first hand, and ex-
amine into its value and suitability for their purposes.

J. F. Ammann.

Sec'y-Elect Illinois State Florists' Association.

assuring a better contentment of mind than when order-
ing from a catalogue stock the general nature of which
they were not fully acquainted with.

There can be no doubt whatever that the nursery trade
is growing fast and those who can take advantage of
the advice to establish a small acreage devoted to this
branch will not fail to receive material benefits there-
from; to thousands of florists, such an addition to their
greenhouse range will prove of substantial and increas-
ing value as the years go on.

In addition there are good openings for those who
will establish plantations for the many specialties most
in demand, as well as for the raising of newer or less
common trees and shrubs.

American Rose Society.

A meeting of the executive committee was held on
Thursday, February 27, at the Hotel Martinique, by
order of President Simpson, to take up the assign-
ment of the numerous special premiums offered for
the annual meeting and Spring show to be held in
conjunction with the Florists' Club of Chicago on
March 25, 26 and 27 in the Blackstone Hall of the
Art Institute, corner of Adams street and Michigan
avenue, Chicago. There are now some 30 premiums
besides the list printed in the official schedule, to be
entered in a supplementary list.

The Chicago people are in dead earnest and we
desire the active co-operation of each person east
of the Allegheny mountains to show what they
can do.
BENJAMIN HAMMOND, Secretary.

New Jersey's Educational Exactions.

About the only things that teachers in the elementary
grades of the public schools of New Jersey are not re-
quired to know are how far it is between two rows of
apple trees, and was the hen first or the egg? says the
New York Herald. At least that is what some of those
who took the February examination declare, and they
offer as proof a list of the questions submitted to them.
They assert that they were never informed that they
would be asked to explain the inner workings of high
finance; that they would be questioned regarding the
best methods of lengthening the legs of a table or that
they would be interrogated as to the value of various
kinds of fertilizer. Here are some of the genuine ques-
tions asked:

"What amount of plant food per acre would sixty
bushels of shelled corn take from the soil?"

"Give three active enemies of fruit trees."

"Give a typical rotation of crops in your locality."

"Draw a plan for a small kitchen garden, designating
the plants."

"What is meant by commercial fertilizer?"

Some of the applicants for teachers' positions pre-
pared a list of questions which, they told the examiners,
should by all means be included in next year's papers.
Persons who cannot answer them, they averred, are in
no way fitted to teach youthful minds. A few samples
of these questions are:

"What soil is best for rubber plants?"

"Will a squab squawk if the toast is hot?"

"How long does it take to travel between two
points?"

"If an owl can see best at night what animal can
see farthest in the daytime?"

"Where is my wandering boy to-night?"

How many of the teachers passed no one has dared
to guess. Few of the applicants had ever been heads
of financial corporations, and the only agricultural ex-
perience any of them had had was to "hook" water-
melons or water the plants.

Chrysanthemum Society of America.

The Chrysanthemum Society of America, realizing
the necessity of closer relations with the various
horticultural societies throughout the country, and
agreeable to a vote taken at the annual meeting in
New York City on November 6, 1907, the executive
committee cheerfully invites the hearty co-opera-
tion of every horticultural society in the United
States, and offers the following for their careful
consideration:

Any horticultural society, or gardeners' or florists'
club may become affiliated with the Chrysanthemum
Society of America on payment of an annual fee
of twenty-five dollars, such fee entitling it to the
following privileges:

1. The C. S. A. will offer a substantial silver trophy
as a prize for chrysanthemums; the character of
the class and conditions of the competition to be
left to the discretion of the society so affiliated.
2. To receive twelve copies of the C. S. A. publi-
cation, free of charge.
3. To have two free passes to the annual exhibi-
tion of the C. S. A.
4. To elect one of its members as a delegate to
the annual meeting of the parent society, with voice
and vote on any subject, except matters of finance,
such delegate to be annually elected by the society
affiliated.

Conditions of Affiliation.

Subject to the foregoing, the affiliated society shall
pay the above mentioned fee on or before April 1 of
each year to the secretary of the C. S. A. and furnish
the following information:

(a) The full title of the society, the name and ad-
dress of the secretary, and the name of the delegate
elected.

(b) The date on which the next Fall show will be
held, and the conditions under which the C. S. A.
trophy will be given.

(c) A copy of the prize schedule of the affiliated
society to be sent to the secretary of the C. S. A. as
soon as possible after publication.

DAVID FRASER, Secretary.

THE MONMOUTH COUNTY (N. J.) HORTICULTURAL
SOCIETY held its twelfth annual meeting in Redmen's
Hall, Red Bank, on February 11. The following offi-
cers were elected: Joseph Kennedy, president; Malachi
Tierney, vice-president; H. A. Kettel, secretary; Ernest
Palmer, financial secretary; N. Butterbach, treasurer.

It was carnation night, and William Turner gave us a
description of Peter Fisher's seedlings and Malachi
Tierney reported about the Carnation Society's exhibi-
tion. At our next meeting, March 13, a schedule will
be prepared for the different lectures before the society
during the year.
B.

Obituary

F. C. Miller.

At the time of going to press we learn with sincere regret of the death of F. C. Miller, Brantford, Ont. Mr. Miller was born in England, and had been in the florist business many years. Interment took place on Wednesday, February 26.

Robert Allan.

Robert Allan died at the Newport (R. I.) hospital, Tuesday evening, February 25, 1908, after a brief illness. Deceased was the second son of the late William Allan, for many years gardener at the Travers estate, and uncle of the late Wm. J. Allan whose obituary notice recently appeared in these columns. Mr. Allan was about 38 years of age and married. He held at one time the position of gardener to Mr. E. C. Knight on Bellevue avenue, Newport. He was of a companionable disposition and very popular. Much sympathy is expressed for his widow and other relatives in this recurrence of bereavement. D. M.

Peter Nees.

Peter Nees, one of the well-known characters of Burlington, Ia., passed away on February 18, 1908, at St. Francis hospital. Although he had reached the age of 84 years, he seemed young to the last. He enjoyed good health until a short time ago when paralysis followed a stroke of apoplexy.

Peter Nees was born in Stockstadt, Germany, October 23, 1823. He received a good education and showed a liking for the florist business. He came to the United States in 1850 and twenty years later moved to Burlington. He purchased property at the corner of Starr avenue and the Mason road; there he established a greenhouse and built up a good business.

Mr. Nees was one of the gentlemen of the old stock, thoroughly honorable in all his dealings, a good neighbor and good citizen. During his long residence in Burlington he made many warm friends. Eight children survive him.

John A. Freeman.

John A. Freeman, florist, Aurora, Ill., passed away on February 18, 1908, at his late home, corner of Illinois avenue and North Lake street, after a severe illness extending over a period of two months. He suffered from tubercular trouble in his stomach and bowels and an operation was performed several weeks ago at the Aurora City hospital in hopes of bringing relief.

Deceased served as alderman of the first ward for three terms, retiring a few years ago after looking after the interests of his constituents in a satisfactory manner.

Mr. Freeman was born in the Province of Halland, Sweden, November 4, 1855, and came to America in 1872. Following a residence of several years in Batavia where he was engaged in the greenhouse business, he removed to Aurora in 1880 and had resided there since. For the past 15 years he successfully conducted a large business at the corner of North Lake street and Illinois avenue.

He was a member of the Nordens Soner organization and the Swedish Lutheran church of this city.

In addition to a widow he leaves to mourn his demise five children.

L. D. Robinson.

Louis Daniel Robinson, who has been associated with the florist establishment of L. D. Robinson, Jr., Springfield, Mass., died suddenly at his home, 175 North Main street, February 26, of heart failure. Mr. Robinson was taken ill with the grip several weeks ago, which developed into erysipelas and finally pleurisy, and for a week his heart grew weaker until the end, which came without warning.

Mr. Robinson was a successful business man, having conducted a picture store for forty years, which he sold out two or three years ago; since then he has been associated with his son in the florist business looking after the store. He was 65 years old. During the Civil War he was a member of the 52d Regiment, Massachusetts Volunteers Company F., serving under Butler and Banks. Later he was stationed at the Springfield Armory; from here he went into the picture business, which he conducted so long. In 1895-7 he was a member of the City Council and in 1898 of the Board of Aldermen. He was elected to the Legislature in 1899, serving two years on the Committees of Military and Prisons. Mr. Robinson was a member of Wilcox post G. A. R., Amity Lodge of Odd Fellows, treasurer of the Amateur Horticultural Society and a director of the Hampden County Horticultural Society.

Besides one son, L. D. Robinson, Jr., he leaves one daughter and his widow.

The Late John A. Freeman.

OUR READERS' VIEWS

Hydrangea Arborescens var. Sterilis.

Editor Florists' Exchange

In Horticulture for January 25, page 99, E. G. Hill tries to justify the registration of the new hydrangea by his firm, an effort that I consider unworthy of respect. More than a year before the registration, a member of the firm of the E. G. Hill Company told me that he knew that Mr. McBeth of Ohio had been propagating this plant for years; and we all know that William Falconer stated in The Florists' Exchange in August, 1904, that Mr. Semple of Pennsylvania had been then rushing its propagation. At the time of the registration the Messrs. Hill knew that, besides those mentioned, at least three other firms, as energetic and enterprising as any in the country, were doing their best to get up a stock—to be exact, Vaughan's Seed Store, Chicago; Livingston of Ohio and John Lewis Childs of Floral Park, N. Y.; perhaps others.

The introduction of this plant is one of the marvels of the twentieth century. It has been cultivated in some localities in Ohio for twenty years or more. Mr. Bassett of New Jersey informs me that a gentleman moving from Missouri and settling on a farm adjoining Mr. Bassett's twenty-five years ago brought one plant of *H. arborescens* var. *sterilis* and planted it on his farm, where it has been blooming in all its glory all these years without any notice or attention. More than twenty years ago a Dr. Steele of Missouri offered Thomas Mehan the entire stock of a sterile form of *H. arborescens* under the name of "Hills or Snow." Mr. Mehan did not purchase it, and as both he and Dr. Steele died soon after, there is no evidence that this find ever got into commerce. It is well to let the name perish with the effort. E. Y. TEAS, Centerville, Ind.

In a former article E. G. Hill stated that this plant had been "growing under the very noses of E. Y. Teas and J. W. McNary for years and years." In his last effusion he states that I first heard of it through him and first saw it in his grounds. It occurs to me that one of these statements is incorrect.

The introduction of this plant is one of the marvels of the twentieth century. It has been cultivated in some localities in Ohio for twenty years or more. Mr. Bassett of New Jersey informs me that a gentleman moving from Missouri and settling on a farm adjoining Mr. Bassett's twenty-five years ago brought one plant of *H. arborescens* var. *sterilis* and planted it on his farm, where it has been blooming in all its glory all these years without any notice or attention. Commercial Carnations.

Read by Wallace R. Pierson, Cromwell, Conn., before the Gardeners and Florists' Club of Boston, Mass., February 25, 1908.

I do not have any intention in writing this paper of giving history. That branch may be useful, but it has been covered so many times that to go back to Lizzie McGowan and Mrs. Fisher is useless. We wish to consider just what working materials we have before us at the present time, and to learn how to make the most of what we have.

The carnation after the advent of Mrs. Thomas W. Lawson and the carnation before that time is as different in all essential characteristics as the light

Wallace R. Pierson.

of a gray day in Winter is to the brilliancy of the houses in full sunlight with the glare from the February show; Daybreak before Mrs. Lawson as the sun breaking through the fog.

We have, to-day, a grand collection of varieties, and there are so many new stars appearing and seeking recognition that we are tempted to ask, Where will it stop? "Because of the success of some new varieties, and because I have a good seedling, am I not justified in putting it on the market?" is the question we are so frequently asked. Let the owner of the seedling think of the number of horses bred from fast stock which are never entered. They are tried out, and if they haven't the ability to deliver the goods, they are never entered in the race. So with carnation seedlings. Raise them if fancy leads you to do so. Try your hand at it, but know before they are presented to the public what their powers really are.

Good Parents Necessary.

I believe that the qualities which go to produce a good seedling are, to a large extent, due to the inherent good qualities of the parents, but with the seedling there is apt to be an increase in vigor. The best articles and papers on the subject of seedlings can only be from those men who handle and study the subject most, and although a haphazard seedling may make good commercially, the best variety is more apt to be produced by one who understands the varieties he works on, and who makes his crosses with certain definite points in view.

The dissemination of a seedling being decided upon, the future success of it, as a variety, depends as much on the manner of producing and sending out the stock as on any inherent good qualities it may have, granted, of course, that it would never have passed the seedling stage had it not some of the inherent qualities which go to make up a Commercial carnation.

A Commercial Carnation Defined.

What, then, is a commercial carnation? To be brief, it is one which the grower can handle so that it is a paying proposition for him, and this necessitates it being one which the public will buy with profit to the retailer. This definition is broad, and yet it covers, I believe, the entire situation. It does not exclude the fancy sorts, provided they can meet the terms which the public will buy, and which is a paying proposition to the grower.

A very large bloom is not, as a rule, obtained in the same capacity from the same space as a smaller one. Here, then, seems to be the size limit. Can we secure more money for the individual bloom to warrant the growing of only such varieties as produce flowers larger than the ordinary? Perhaps with some success, there would be such a

demand, but not as a rule would this be true. The commercial carnation in its broadest sense is the medium-sized bloom, the average length stem, the non-bursting calyx, the even-colored flower, with the keeping and shipping qualities which are usually a part of the make-up of such a bloom as I have tried to describe. Light pink, intermediate pink, dark or cerise pink, scarlet, dark red and white we must consider standards.

Variogated we must class as fancy, for both white and yellow variegated are profitable only when grown where there is a market which calls for them.

The number of blooms per square foot of bench, and the number of dollars per year are the only questions the commercial grower should consider. The average number of flowers per plant is a deceiving method of calculating the profitability of a variety, for one plant of some varieties will occupy the same space as three of a different type which run to bloom and not to plant.

Then, too, one year's experience with a novelty is not always a proper guide, if the results be shown merely on paper. A different handling may produce different results. Very few varieties become disseminated without having some good features, and while one variety may do well in a locality, another may not. This is the nature of the beast, and having in mind several that have failed me, and done well elsewhere, I will drop the subject.

The Best Method of Handling.

Given, then, a stock of standard varieties, what is the best method of handling them all the way through? To this I reply, with consideration for the individuality of each and every variety in your list. I will try to explain myself on this subject.

Three distinct classes of varieties appear to me; one inclined to soft heavy foliage and curly leaves. This type is inclined to come short-jointed, and to require an unusually heavy body of roots to produce early blooms with stems long enough to be worth the handling. For these there is nothing but indoor culture to secure the best results.

The second class is the doubtful one. The thin-foliaged, loose-jointed specimen which makes only blooms if grown inside and very little plant. It needs less soil, and with less top makes correspondingly less root. Field culture with early benching seems the best, as the production of plant is easier to accomplish in the field.

As a type of the third or variable class, I wish to mention Enchantress, a variety which will be found superb for indoor culture, and an easy variety to lift from the field, even as late as September, to fill the last ends and prevent loss of space.

Classing these varieties, then, as we do, we plan our planting as soon as we can determine how much

room we can count on after Easter. The condition of the breaks from ten to twelve inches above the soil in February will determine this. Get the heavy-foliaged varieties ready for an early start. Then comes the wait for after Memorial Day, and the Summer's shifting is in full blast, aiming always to leave a part of a house of white and some Enchantress for the last of June.

We like to handle young stock in pots for the April benching, and in 3-inch is a convenient size to handle, this stock having been shifted from 2-inch, or 2½-inch, as the case may be. Where this stock has been in 2-inch, however, a shift to 2½-inch and then to 3-inch is to be preferred to a single potting.

For later use, benching out in shallow soil about 4 inches apart gives a better chance for the plants, and means less work, and danger of loss or stunting, due to being potbound, is avoided.

Field planting from 2-inch pots is the next in order, and then the care in the field. Summer watering I do not approve of, and for the following reasons: It is very seldom that the soil takes up this moisture to any depth. If done at night, the sun of the next day takes it all back, and by capillary attraction takes more even than was given. A continual wetting of the foliage at night is a great incentive to leaf spot, and a growth under these conditions will be soft and is therefore an easy subject to such fungus.

The best plants come from the field that gets the most hoeing, and I do not think a well cultivated field can be improved upon, except by more hoeing.

Our system, then, is a combination of the two, or rather three, methods. Pot culture, bedding them out in the houses intended for chrysanthemums, and field culture.

Inside Culture.

"Would you plant them all inside if you could?" is a question I am often asked, and I can only answer it by saying that it is an impossibility to handle all our stock with any one method. Our supply of blooms is broken for only two months, as we cut by September, first from the first planted houses, and our last houses we aim to plant in early July, and do not care to cut from them until November.

Last season we planted one bench in March, and they are still looking well and producing the flowers.

Benches vs. Solid Beds.

"Do you prefer the bench to the solid bed?" is another. I will answer it by saying that for early planted stock the bed is superior; for field plants I prefer the bench. The heavy-foliaged varieties seem to be in their element on the beds, while the others seem to even up matters.

Carnation Lucille.

Originator Fritz Bahr, Highland Park, Ill.

(See Page 259, issue of February 22, 1908.)

Temperature.

Temperatures can almost be figured by classes, the heavy-foliaged varieties, as a rule, standing for a little more heat. The evenness of the night temperature is perhaps the most essential. Very seldom have we had any trouble with blooms which could not be traced to this source. Softness in such varieties as Enchantress usually means an over-abundance of water at the roots, or a too high temperature at night. A hard bud is usually a check from contact with glass, or cold draughts of air at some time, due, perhaps, to a sudden drop in temperature, or a broken glass. If we would grow carnations well, we must watch them nights.

The producing of the best is one long struggle. Insects, fungi and temperature all make it a never-ending fight. Watchfulness, combined with common sense and the willingness to do hard work will succeed in meeting these troubles, and coming out with success and credit.

Hints to the Retailer.

To the retailer I would say, "Help your grower." What sells best with you? What colors are you wanting most? Advise him how the flowers keep, and he'll know how to run the houses.

And, growers, let me say to you that it is poor economy to grow second-class stock, because business is dull this season. On good stock depends your future, for it is one of the essential elements of success.

Our Experiment Stations and What We Have Done.

Extract from a Paper read by Professor A. C. Beal before the Illinois State Florists' Association at Springfield, Ill., February, 1908.

The amount originally given each State for the maintenance of an experiment station was \$15,000 annually. The Adams Act of March 16, 1906, supplemented this with \$5,000 for each station for that year with an increase of \$2,000 annually. Most of the stations receive, therefore, from the National Government for the present year \$24,000 for research in agriculture. Some of the States have increased this by very large appropriations; for example, Illinois Experiment Station receives \$102,500 from the State for experiment work in addition to the amount from Congress.

Floriculture is one of the interests which more recently has received a little attention from the stations.

Aside from insect and disease problems and leaving out of consideration, for the moment, publications on forcing vegetables, it seems incredible that an industry representing so large an investment of capital and with an annual product of so great a value has not received more recognition. According to the census of 1900 the amount of capital invested in floriculture was \$52,162,419 and wholesale value of the product is given at \$18,422,522. Since 1900 the florist business has developed wonderfully and the investment is not far from \$100,000,000 for the whole country. What interest of such magnitude has been given less recognition?

In this connection it is well to bear in mind that when the stations were founded the farmer was the one for whom those in charge of the work looked for support and whom they sought to benefit. Most men, and the farmers least of all, know little about plant growing under glass and he generally has a sort of contempt for the man whose operations are confined to a small area. He might be surprised to learn that there are florists in Illinois who grow under glass more rose or carnation plants than there are hills of corn on fifty acres of land. If he had any adequate conception of the amount of handling, pruning, tying, etc., to care for this number of plants as compared with cultivating the same number of hills of corn, he would have a better opinion of the florist business.

Bulletins on Horticultural Subjects.

There has been some work done by the experiment stations. Of those publications dealing with flowers, except a few bulletins from Cornell, practically all treat of insects and diseases. The majority of the bulletins have been on the subject of forcing vegetables under glass and the pests affecting them.

Within the limits of this paper it is impossible to mention all reports of work done by the various stations.

In New York the Cornell station has issued four publications on the chrysanthemum, dealing chiefly with tests of varieties. One bulletin each on the China asters, dahlias, annual flowers, a peony check list and two on sweet peas, one each on Winter muskmelons, English cucumbers, forcing tomatoes, mushroom growing, strawberry forcing; a second report on strawberry forcing and notes on tomato forcing. Also upon

A Shamrock Girl.

Courtesy John F. Rupp, Shiremanstown, Pa.

miscellaneous topics, like damping off, two bulletins on greenhouse heating and one on greenhouse notes.

At Geneva in the same State there has been issued one bulletin on carnation rust, anthracnose and stem rot of the snapdragon, and ringing herbaceous plants. In vegetable forcing on forcing head lettuce, use of stable manure and nitrogenous chemical fertilizers for forcing lettuce, forcing tomatoes and mushroom growing and forcing lettuce in pots.

Massachusetts has published articles in its annual reports on soil sterilization and upon germination and growth in soils of different texture, also on the effect of electricity on plant growth. Also bulletins on growing asters, cucumbers under glass and tomatoes under glass, nematode worms, rotting of greenhouse lettuce. A portion of one bulletin is devoted to greenhouse thrips.

From the New Jersey station has appeared the bulletins on the rose chaffer, rose scale, insects injurious to shade trees and ornamental plants, forcing tomatoes. The annual reports contain a great deal of information on the diseases of greenhouse plants.

New Hampshire station has published on forcing dwarf tomatoes, green corn under glass, utilizing greenhouses in summer, forcing pole beans under glass, the white fly.

of them... by... Nebraska... Michigan... Rhode Island... Vermont... Only one bulletin has been published on the raising of roses and that from an experient station in the country, Oregon.

Our neighbor, Indiana, has published a bulletin on white-bellied plants, but no bulletin on carnations, a bulletin on diseases of forcing head lettuce, and one on forcing lettuce with chemical fertilizers.

Illinois has published one bulletin on the general subject of tomato forcing. However, I am unable to find the manuscript for a bulletin on forcing head lettuce, and details of kind for forcing head lettuce, cucumbers, strawberries, forcing peas, and other than fertilizers.

Illinois Leads.

I think it a matter of congratulation that this association secured the first appropriation for the exclusive purpose of experimentation in floriculture. Illinois leads in floriculture and it was quite fitting that she should take the lead. The Legislature is to be commended for its recognition of this industry by providing funds with which to start the work.

Since Illinois is taking the lead we have great responsibility, as the other States are watching with interest the outcome. We should be exceedingly careful in the expenditure of the funds to secure the greatest possible results. We may be certain that other States sooner or later will follow our example. Should we not accomplish this we need not fear but that we shall get further appropriations. It marks a new epoch in floriculture in the experiment stations.

Thrips Investigations.

The advisory committee decided that investigations on thrips be taken up this year. A search of the literature was begun to learn what was already known, including everything written by florists. From this and from correspondence it was learned that little was known about the species doing the damage and also about their life history in greenhouses. It became necessary to enlist the service of the entomologists in the problem, Dr. S. A. Forbes very willingly detailed one of his most capable assistants on this work.

Since the horticultural greenhouses at the university were put to other purposes we had to seek houses at some other city. After considerable search and correspondence the university authorities decided that work should be begun at Bloomington, since it seemed that the houses were better adapted to our needs and more convenient.

The house was already planted to two varieties of carnations, Queen Louise and Genevieve Lord. Varieties of these colors do not show thrips injury unless the insects are numerous and the amount of feeding is considerable. As the house was planted late there were few blooms until December and consequently few thrips.

(To be Continued.)

DIRECTORY OF RELIABLE
RETAIL HOUSES

FOR THE RETAILER

CLUB AND SOCIETY DOINGS

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. O. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

EASTER ANNOUNCEMENT CARDS

We have an illustration, and will issue in ample time for the Easter season, six different designs in Easter Announcement Cards, prepared specially for those who call last minute at retail. These Announcements are ample for all occasions, and very inexpensive. For a set of samples, send for them.

DE LA MARE P & P CO., P. O. Box 1697, NEW YORK

Design sent to Funeral of J. B. Heiss. By Dayton (O.) Florists' Club.

Floral Tribute to the Late J. B. Heiss.

Our illustration shows the floral tribute sent by the Dayton (O.) Florists' Club to the funeral of J. B. Heiss, the first president of the organization. The design, a Trinity cross, stood six feet high, and was made of roses, carnations, lily-of-the-valleys, and sweet peas. The base was filled with American Beauty roses. The inscription on the ribbon read: "Our First President Dayton Florists' Club."

Design for Funeral of an Elk. By J. L. Dillon, Bloomsburg, Pa.

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY. The monthly show of this society for February was very creditable considering that there was no special effort made to get it together. A. R. Kennedy, gardener to Dr. Leslie D. Ward, had without doubt the best vase of White Enchantress that we ever had here. It will be remembered that the same exhibitor had at the twelfth annual smoker a sensational lot of Victory; on both exhibits he was awarded a cultural certificate.

W. A. Manda, South Orange, N. J. showed a new carnation, No. 20, of a beautiful pink shade, that the committee decided was a "promising commercial variety and would like to see more of it." Charles H. Totty had fine White Perfection; and Arthur Herrington, Beacon in fine stem, flower and color. A cultural certificate was awarded to both.

Robert Scott & Son, Sharon Hill, Pa., sent 50 flowers of the new rose Mrs. Jardine. It is a full double pink, said to be a true Winter bloomer and if our Madison boys can grow it as it was shown the other night, there ought to be money in it. It secured a certificate of merit.

Wm. F. Lyons showed a hybrid calanthe which was much admired. Florham Farms staged a nice collection of hothouse vegetables that looked tempting and about 50 stocks, in the varieties Beauty of Nice and Queen Alexandra; they formed a grand demonstration of what is possible from a Finch pot.

Our next meeting on March 11 will be "carnation night." A. R. Kennedy will read a paper on carnations. The topic of the evening was "New Chrysanthemums," and, of course, Mr. Totty opened the discussion, which became general, and a very interesting and instructive hour was passed. E. R.

Two Dillon Designs

Our illustrations represent two floral designs, the work of the J. L. Dillon establishment of Bloomsburg, Pa. The wreath is made of callas, roses, carnations and narcissus, with a bow of chiffon ribbon. The Elks' design is composed of white carnations edged with pink roses and white narcissus, with purple lettering and figures.

This firm states that trade in this locality has been extremely good, considering the stringency in the money market all over the country. The demand has been larger than the supply. A fact on which the concern is to be congratulated.

Funeral Wreath. By J. L. Dillon, Bloomsburg, Pa.

A Visit to Springfield, Ill.

The unusually severe snowstorm experienced by the visitors to the Illinois State Florists' Association convention at Springfield, February 18-19, made the delegates very thankful to Antrim C. Brown, president of the Springfield Florists' Club, for the means of transportation which he furnished for those wishing to visit the establishments of the local growers. Mr. Brown sent to hotel headquarters two immense sleds, each with four horses, and two jolly parties soon ensconced themselves snugly in the straw and thoroughly enjoyed the novelty of a winter straw-ride. The first establishment visited was Mr. Brown's, and a surprise certainly awaited all. There are seven houses, each 317 feet long. Most of the glass area is devoted to carnations, and these flowers are just now seen in the pink of condition. Mrs. T. W. Lawson, Mrs. M. A. Patten, Enchantress, Boston Market, White Enchantress, Winsor, Victory and Rose Pink Enchantress are the varieties grown, with Governor Demen, a variety of royal purple color, which has been introduced by Mr. Brown himself. This variety produces large full flowers, most of them four inches in diameter, and

about 20 flowering shoots to the plant. As a red variety to precede Beacon it is said to be exceedingly useful. Mr. Canfield is a large grower of mushrooms and utilizes all available space under his benches for this culture. In one or two houses the mushrooms are grown in double tier benches, the top ones being used for propagating carnation cuttings. The mushroom yield averages 50 lbs. per day. In one of the houses a number of flats are to be seen in which early asters are sown. Some were sown as early as December 1 and are approaching the transplanting stage. They are sown for succession, seeds directly on soil, and covered by half an inch of sand. Sample's Purple, Vick's Daybreak, and Vick's Branching White are the varieties grown, and Mr. Canfield says he is usually very successful with early asters, other growers' experiences to the contrary notwithstanding.

At the establishment of Miss Bell Miller the work of sheathing the shed, over 200 feet long, running across the range of greenhouses, was in progress, and almost completed. The improvement is thoroughly in keeping with the general appearance of the place, which is very fine. Carnations are principally grown. There are several houses planted with Mrs. T. W. Lawson, Mrs. M. A. Pat-

New York. The Week's News.

The New York Florists' Club, annual dinner takes place this (Saturday) evening at the St. Denis Hotel, Broad way and Eleventh street, and, from present indications, the attendance will be well up to the average. The dinner will be served promptly at 7:30 o'clock, so it behooves all members to assemble in good time. Speakers have been invited; a very fine musical program will be rendered by well-known musicians, and the dinner itself will be all that can be desired. As the chairman of the committee, Mr. Sheridan, said at the last meeting of the club, those who have objections to wearing dress suits need not be absent on that account, as it is not intended that the dinner shall be a full dress affair.

There is a rumor afloat that the carnation growers of Long Island intend forming themselves into an association for mutual benefit. Organization in all lines seems to be the order of the day. The recent getting together of the wholesale florists has had very beneficial effects so far, and no doubt an organization of the Long Island carnation growers, if consummated, will prove advantageous in many ways.

L. G. Scollie, of the firm of L. A. Scollie, horticultural engineer, was again re-elected treasurer of the American Society of Heating and Ventilating Engineers, at their annual meeting, held in New York City, January 23.

Fred Smythe, of the firm of Wadley & Smythe, retail florists, Fifth avenue, sailed for Europe on Friday, February 21.

The plant auction sales at Wm. Elford & Sons will commence about the middle of March. Cleary's Horticultural Company also intend beginning their Spring sales about the same time.

A serious accident occurred in New York a few days ago, when a wagonette was struck by a fast train while crossing the railroad tracks. Among several people killed was a cousin of B. S. Slim, the well-known wholesale florist of Twenty-sixth street and Sixth avenue.

Professor L. C. Corbett, Horticulturist of the United States Department of Agriculture, Washington, D. C., will read a paper at the club meeting on Monday, March 9, on the "Preparation of Soil for Greenhouse Purposes."

The annual convention of the National Association of Gardeners will be held in New York City, March 19 and 20, 1908.

In the Rose Section of Exhibition of Illinois State Florists' Association at Springfield.

Group of Visitors at Greenhouses of Antrim C. Brown, Springfield, during convention of Illinois State Florists' Association.

while the color does not make it a favored commercial sort, Mr. Brown says he has no difficulty in disposing of a liberal cut, most of the flowers going to the gubernatorial tables in Illinois and other States. The variety originated from a cross between Enchantress and Governor Roosevelt. White Enchantress is much liked here, and is producing a quantity of perfect blooms, many fully four inches in diameter. All the benches are mulched with old horse manure, the soil available at the establishment having a tendency to dry out badly. A department for seedlings, and some trial benches of a few promising sorts, are quite interesting. There are two pink seedlings and a scarlet which will probably get to the disseminating point. A light lemon variety is also very pleasing. A house of single violets looks very fine, the flowers being quite large and well stemmed. There are several benches of cinerarias, especially well-flowered and comprising a handsome collection in variety. A lot of fine hybrid tea roses in pots show healthy breaks in course of preparation for Easter. Some houses of American Beauty, Bride, Bridesmaid, Killarney, Perle des Jardins and Richmond are in grand shape, although, with the exception of Richmond, not yet in crop. After going the rounds of the houses the visitors were entertained in the potting shed, refreshments being liberally served.

The party next visited the establishment of A. C. Canfield, where several houses of Bride and Bridesmaid roses, all grafted stock, and carnations were seen. Among the carnations was noticed a new scarlet variety originating here, which has been named Red Nelson Fisher. Mr. Canfield says it comes into cut shortly after planting and is very prolific, averaging

ten, Enchantress, White Perfection and Variegated Lawson. The latter is liked here much better than Patten. Dorothy Whitney is grown as a yellow. There are some fine houses of Bride, Bridesmaid, Mme. Abel Chateau, American Beauty, and Richmond roses, the latter in excellent crop and producing good long-stemmed flowers. Gladiolus is forced in the carnation benches, and flower spikes are already appearing on some of the stock. Boston ferns are also well done here. Business appears quite brisk in the retail department, a quantity of funeral work being in hand. J. H. P.

DAVENPORT, IA.—The Tri-City Florists' Society held a well attended meeting February 13, with John Stanek of Moline. The meeting was addressed by Mr. Rupp of Chicago, who spoke at length on modern greenhouse construction. The main discussion of the evening was on "Preparation of Easter Stock." One new candidate was admitted to membership and several routine business matters transacted. The committee which has charge of the annual banquet submitted a report in which the date of the banquet was changed to March 19. The committee has chosen the Manufacturers Hotel in Moline. The nomination of officers for the coming term took place and practically all the old officers were chosen. The election will be held in the near future. John Temple was chosen as representative to the American Rose Society's convention which will be held in Chicago on March 25 and 26.

Following the business meeting a social evening was enjoyed and refreshments were served. The next meeting will be held with Harry Bills of Davenport.

Next Wednesday, March 4, sees the beginning of Lent. It is not the rule that the flower business suffers a great deal during the Lenten season, though last year was an exception, business during that period at that time falling off quite considerably. There is one consolation this year, however, and that is, with the beginning of Lent, business in cut flowers is in such a state that it would seem impossible for it to get much worse.

Clan McDonald of Brooklyn intends devoting a Saturday night to a musical rendering of some of the songs of Tannahill, believed by many to be the greatest Scotch song writer. On this occasion John Birnie, West Hoboken, N. J., will be the guest of honor, he having initiated the affair, and should the date be set for this Saturday, February 29, it will prevent Mr. Birnie attending the dinner of the Florists' Club. This will be easily understood by those who are acquainted with Mr. Birnie. It goes without saying that Scotch music has the preference with him first, last and all the time. Let us hope, however, that the Tannahill night of Clan McDonald will come on some other Saturday than this one.

The florist store of Daniel Angelos, 416 Sumner avenue, Brooklyn, was burglarized recently, the thieves getting away with \$7 in cash, a suit of clothes and a suit case.

The Rapp Horticultural Building Company is a new incorporation, capitalized at \$100,000, for the manufacture of hot-houses, greenhouses, etc., with offices at 1 Madison avenue. The incorporators are William J. McCormick, 562 West One hundred and Seventy-third street; Roy L. Rapp, 1 Madison avenue, both of New York City, and Wm. C. Lange, College Point, N. Y.

at Allaire's Hall, Seventeenth street and Third avenue. Among those who will address the meetings are George T. Powell, John T. Withers, Charles H. Totty and Patrick O'Mara. A banquet has been arranged for the closing evening, March 20, at Allaire's restaurant, at which fifty of the leading men in the horticultural world have signified their intention of being present. There is a disposition on the part of the Western gardeners to secure the convention in 1909.

PIERRE, S. D. The supreme court has refused to grant a release on habeas corpus asked for in the application of Henry M. Hawley of Sioux Falls in a case brought to test the nursery stock law. The court holds that a bond cannot be required, but that the provisions of the law requiring a fee for doing business, and inspection of stock, are good, and must be complied with. E. R. Winans of this city, represented the American Association of Nurserymen in this suit to test the validity of the law. Mr. Winans states that he and his client object only to the feature of the law requiring a \$5,000 bond, and the dispatch indicates they have won in this contention. In other respects, the law will stand.

ROCHESTER, N. Y. Helen E., wife of Andrew J. Lepper, died at her home on December 14 last, aged 62 years. The couple had been married 40 years and during her life Mrs. Lepper assisted her husband in his work; her loss is keenly felt by him, and the sympathy of the trade is extended to him in his great bereavement.

FERNS

MY SPECIALTY

I have an immense stock of assorted ferns for Jardinieres, healthy and bushy, none better; in 15 of the best market varieties, including *Cyrtium Falcatum*, *Aspidium Taussemense*, *Pteris Wimsettii* and *Mayii*, in good proportion, from 2 1/2 in. pots, \$3.00 per 100; \$25.00 per 1000; 500 at 1000 rate.

- CENTER PLANTS (Exact Size)**
- Kentia Belmoreana*, 2 1/4 in., \$1.30 per doz., \$10.00 per 100.
 - Assorted Ferns, 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
 - Adiantum Cupatum*, fine stock, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000; 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.
 - Adiantum Farleyense*, 4 in., \$4.75 per doz., \$35.00 per 100; 5 in., \$8.50 per doz., \$65.00 per 100, 6 in., \$12.00 per doz.
 - Adiantum Gracillimum*, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000.
 - Cibotium Schiedel*, 4 in., \$3.50 per doz., \$25.00 per 100.
 - Nephrolepis Scottii*, 6 in., \$7.00 per doz., \$60.00 per 100; 8 in., \$15.00 per doz., worth the double.
 - Elegantissima* and *Pieroni*, 5 in., \$5.50 per doz.
 - Fern Spores**, gathered from my own stock, guaranteed fresh, 1907 crop, good, commercial varieties, 30c. per trade pkt.; \$3.00 per dozen.

J. F. ANDERSON, Short Hills, N. J.

Bushy Ferns

Unusually fine stock of the Holly Fern (*Cyrtium falcatum*), *Pteris cretica* albo, *Pteris Wimsettii*, etc. 3 in. pots, 6c.; 2 in. pots, 3c. We have never had better plants and will give you very liberal count on January orders.

Cibotium Schiedel, 3 in. pots for growing on 20c.

ASPARAGUS Plumosus, extra strong 2 in. stock but with some of the foliage slightly disfigured. Give them a small shift and they will make fine plants. \$2.00 per 100.

PRIMULA Obconica Grand. In full bloom. 3 in. pots, 5c.; 3 1/2 in. pots, 6c.; 4 in. pots, 8c.

R. G. HANFORD, NORWALK, CONN.

FERNS

Boston, Scottii, 4 in. 15c.; 6 in. 40c. Some extra heavy *Scottii* at 60c. each. All pot grown.
Asparagus Plumosus, 2 1/4 in., \$3.50 per 100.
KENTIA Belmoreana, 4 in., \$25.00 per 100.

EASTER ANNOUNCEMENT CARDS

We have in preparation, and will issue in ample time for the Easter season, six different designs in Easter Announcement Cards, prepared specially for those who sell Easter stock at retail. These Announcements are simple but effective, and very inexpensive. For a set of samples, etc., address
De La Mare P. & Co., P. O. Box 1697, New York

THE WEEK'S WORK

Timme's Timely Teachings.

Marguerites.
It is the plant of good size and spread, cut back in the Fall, given the richest of compost and now firmly established in reasonably large pots, that flowers most freely. Marguerites of that description are now furnishing a lot of fine blooms, have done so for weeks, blooms that it would even pay to raise in quantity for the wholesale market were the growers at a loss how best to utilize spare room. That is never the kind of quandary that sets the thrifty retailer a-thinking. For all that and despite the ruggedly unattractive appearance of the overworked Marguerite, the plant is the local florists' handy friend in need. As such it surely deserves to be grown in a limited way on every place where a variety of stock is to supply a multifarious retail demand.

Then there is the Marguerite for Easter, not a different variety, but a different plant altogether from the one flowering itself to death at the faraway corner of the greenhouse. Here we want something spruce, neat and nobby. We get it by rooting sturdy side and top shoots from December until early March, potting them up when ready, pinching them back once or twice, affording the needful amount of moisture, light and fresh air in one of the intermediate or cool houses and thus having most of the plants in bloom and good shape for Easter. The fleshy tops pinched away in stopping also root and grow into the proper kind of plants for the filling of pans or the grouping of several in a pot; nothing in the line of Easter offerings the good grower need be especially proud of, it is true, but well to be supplied with for a certain class of demand at certain times when azaleas run high and the money thins low. Any such stock left over from holiday and Spring sales will with ordinary care grow into good plants for next season.

Petunias.
Well grown 4 or 5-inch pot plants of ever-flowering annuals are good stock at all times. If taken in hand by the average grower with the same sort of average skill that he is compelled to exercise in other lines of plant production, their being merely common annuals would not stand in the way of bringing them into as great favor with plantmen as they already are with buyers. For, be it understood, that any of the annuals suitable for the purpose here in view—and there are dozens of them—require the same amount of careful attention in their raising as anything else destined

JULIUS ROEHR'S CO.
RUTHERFORD, N. J.

ORCHIDS

We shall receive this Spring large quantities of imported ORCHIDS, namely: *Cattleyas*, *Dendrobiums*, *Oncidiums*, *Laelias*, *Vandas*, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.
CARRILLO & BALDWIN, Secaucus, N. J.

to figure as attractive, well-finished pot or market plants. By banishing the idea that common garden annuals are the connecting link between florists' plants and worthless weeds, requiring far less care than the former and but a little more than the latter, the first and greatest obstacle to the more extensive culture of such things as petunias, snapdragons, mignonette, stock, phlox, etc., for the purpose indicated would be removed. If really well done their title to a place on any greenhouse bench alongside of the best grown of geraniums, fuchsias, heliotropes, cyclamens, etc., cannot be disputed, nor their value as profitable stock, because they are readily sold and require a much shorter time to become salable.

None of the annuals is easier grown into fine, compact market plants than the petunia. Seeds may be grown into as fine plants as cuttings by selecting one or several of the best sorts, and this at any time of the year. For the early Spring sales in flowering potted plants, the little seedlings should now be near their first transplanting, either into little pots or once more into other boxes. Any good soil will do, but should not be too rich for the last shift. The first week in March is time enough to sow petunias for general bedding stock.

Salvias.
Another good thing for the trade in flowering potted plants throughout the greater part of the year is the salvia. As such it has not received the amount of attention that it deserves, while for bedding purposes its good qualities have now placed it on an almost equal footing with geraniums. The number of new varieties is not increasing to the extent of embarrassing the grower in deciding on what would be best for the purpose his salvias are intended to serve. Very tall varieties are wanted, something that will form the rear rows of borders running along garden walls, a covering for the rough facing of brick and stone foundations, anything tall in freely flowering salvia for isolated groups, hedge-like screens and unsightly corners. The old *Salvia splendens*, growing in good soil to a height of four feet, comes mighty handy for just such places. Its intensely scarlet spikes, a foot in length, were the glory of the garden, if chance favored the old thing. It would wait too long before it got ready to flower, sometimes being blackened by frosts before it ever showed bloom. That is why the new kinds were welcomed by everybody. Their early and continuous flowering speaks for them; in that they have been improved; also in the number of flowers produced on the individual plant, but not in depth of color or size of flower spikes. I suppose that is all according to what one should expect; every kind of gain seems to mean a loss somewhere. But why work toward the dwarfing of salvias? Dwarf salvias are not as good as tall ones, are not as serviceable, nor are they as full of life and vigor as any of the newer kinds first introduced and coming nearest to being right for what salvias are wanted. Dwarf salvias are not better for pot culture than any others of compact, free-flowering habit, and in low growing bedding plants there are any number far better than dwarf salvias. It is the tall salvia that everybody calls for.

Impatiens and Torenia.
Admirable for Summer bedding and pot culture are the newer hybrids of *Impatiens Sultanii* and *I. Holstii*, and the same can be said of *Torenia Fournieri*. Both of them want about the same treatment all through. In heavy clay soils or over-enriched borders neither of them will ever amount to much, while in sandy, fairly good ground they are truly fine. The seeds should be sown early, not much later than the end of February. They are slow in covering the seed pan with thrifty plantlets, need bottom heat, care in watering and a pricking over as soon as they can possibly be handled. After that they grow faster and when once transplanted into small pots they go right ahead, rapidly gaining in vigor and spread and meanwhile beginning to flower on the tips of every shoot. Another transplanting into 3-inch pots makes them salable stock for bedding, flowering all the while with never a let-up until destroyed by the first frosts in Autumn, for both *torenia* and *impatiens* are quite tender. If planted in a too rich soil they will make an undesirably rampant growth apt to impair the beauty of either as an ever-blooming dwarf bedder. As 4 and 5-

inch potted plants, shapely bushes, all ways laden with bloom, they greatly add to an attractive diversity of the stock displayed and not a little to the sum total of sales. A batch of seedlings raised from a packet or two of seeds of impatiens hybrids will exhibit a great variety of shades in the flowers as also in the habit and behavior of the plants. Red and crimson generally predominate, a small percentage throwing flowers of a delicate light pink or bright, deep salmon color. These latter are the prizes. A bed of these presents a marvelous sight all Summer, and as greenhouse potted plants there is nothing nicer. Any such plants, especially those of a sturdy, bushy growth, should be held in stock to be multiplied by cuttings, which root as easy and quickly as colons, look somewhat like them, too, and require the same treatment, but, unlike colons, are not overrun with mealy bug in Winter.

Wallflowers and Stocks.

The so-called Winter-flowering or Brompton stocks are half-hardy biennials, the most fragrant of all the kinds of stock and the best for pot culture. English wallflowers are perennials, almost hardy and noted for their peculiarly sweet odor. Both thrive under about the same method of culture, which is so easy and simple that its being not more exacting or fussy has probably been the reason why florists on this side of the Atlantic would rather fill their houses with more expensive and less profitable plants to overflowing than to grant a half-dozen square yards of bench space to things requiring less coal, less care and less hustling to convert them into good property and easily earned cash. Seeds sown in early Spring, either in trays in the house or in a cold frame, sprout in less than a week, are pricked off when yet quite small, the wallflowers not needing it so much as the stocks; and after that the seedlings grow rapidly into the proper height, two or three inches, for being planted in the field. In September they are fine compact bushes showing buds. All the wallflowers are potted up; of Brompton stocks only the double flowering plants, the singles being of little value except for seed raising, the doubles playing no part whatever in the matter of seed production. The potted plants are carried through the first and greater part of Winter in well-protected frames or some cool greenhouse, and if in February or March afforded a little more heat, a little more water and stood where light and air are not lacking, both will soon begin to bloom, spreading delicious fragrance and delighting all comers. Single French wallflowers can be forced during Fall and early Winter. The process of culture is similar to that outlined for the English kinds, but instead of potting the plants in the Fall they are benched, and in moderate heat with plenty of ventilation will furnish spikes of bloom for cutting until away into February.

Ten-Week Stocks and Candytuft.

The principal attribute, fragrance, which has won for the forcing kinds of wallflowers recognition in the cut flower market, is not entirely lacking in ten-week stocks, though it is not as pronounced as in the Brompton stock or as captivatingly sweet as that emitted by wallflowers. But bright color adds to the value of annual stocks for cutting as well as for outdoor bedding purposes. Some few of the varieties admit of being grown into acceptable 4-inch potted plants within so short a time as to make any retail grower's effort in this direction worth while. Best varieties for this purpose are the dwarf and bushy La France, Snowflake, May Queen, Brilliant and Princess Alice, also the wallflower-leaved strain of ten-week stocks. For the garden all kinds are good, but give out toward Fall. As forcing stock for cutting the taller, large-flowering sorts pay best, if the term forcing is not taken too literally, because even the best adapted for indoor culture dislike high artificial heat, and highest results are only obtained in cool, well-lighted and frequently aired houses. For early Fall and Winter the two varieties, Beauty of Nice and Empress Elizabeth, are most easily made to produce fine material for cutting. Of all the varieties of candytuft those bringing white flowers are the best for cutting and of these none is quite as good as Empress, now grown to some extent but meeting with uncertain demand at the markets, though useful at all times as a home commodity. The seeds of both candytuft and ten-week stocks come up in a few days and also

damp off quickly if overwatered, sown too thickly or when fresh air is withheld. The mildly heated frame out of doors is a better place than the fire heated greenhouse for the starting of the seeds as well as for the transplanted small seedlings of both stocks and candytuft. A mixture of very sandy, liberally enriched loam is the best soil to use for these sorts of plants.

Schizanthus.

For the garden border it is not difficult to find something more satisfactory than schizanthus. One must look sharp to perceive its merits as a bedding plant. But as a pot plant it is certainly good, and wherever it fails to make good as such it is not the plants' fault but the grower's fault. Its culture is easy enough and its progress very rapid too rapid for some growers to follow it up with proper attention. Schizanthus is not a hothouse plant, and although the germination of the seeds may be hastened by a little bottom heat, any sort of pushing by means usually employed in hastening growth, including a high degree of temperature, very rich soil and humid, close atmosphere, is not only needless but sure to result in anything but nice, self-supporting, blossom bedecked bushes, such as the grower had in mind when he sent for the seeds. The seeds must be sown thinly on sandy, porous soil, not necessarily leaf mold, be held fairly moist and the boxes removed close to the light as soon as the seeds have sprouted. If not too crowded a pricking off is not necessary, and the seedlings are allowed to grow into sturdy little plants, which does not take them long, and are then put singly into little pots, another shift into pots a size larger becoming necessary soon thereafter. All this time the fast advancing plants want to be up close to the light and not away from where fresh air can have its play about them. Now they will soon form buds, a legion of them on every plant. It is then time to give them the last shift into 4, 5 or 6-inch pots, according to spread and vigor, which vary in any lot of schizanthus seedlings to about that extent. The soil for this last transplanting should be more enriched with old barnyard manure and a little bone meal. The plants will be finer under greenhouse culture right along than if placed in outdoor frames, always provided the greenhouse is not too warm and amply equipped with freely opened ventilators. FRED. W. TIMME.

CYCLAMEN

Splendens Gigantum Hybrids

Finest strain in the world. Perfect flowers of Giant type in 5 true colors twice transplanted from flats \$3.00 per 100, \$25.00 per 1000.

ANNOUNCEMENT

Our new seedling carnation TOREADOR will not be disseminated until January, 1909. For further particulars address THE H. WEBER & SONS CO., OAKLAND, MD.

Rooted Carnation Cuttings

It will pay you to send for my catalogue and price list of the best novelties and standard varieties before buying.

A. F. LONGREN, Des Plaines, Ill.

NEW CRIMSON CARNATION
HARVARD

The color of this novelty is a very rich crimson. The blooms are of the finest as to size and quality and the habit is free and continuous, every shoot producing a flower with a calyx which we guarantee as non-bursting. Blooms borne on long, wiry stems from 24 to 30 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

New Carnation FAUST (BRILLIANT SCARLET) This novelty very fine for commercial use, owing to its extreme productiveness; a fine one for Christmas trade. Color, form, stems, habit and productiveness all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKCROFT, Northport, N. Y. NEW YORK, January 16/08.
Dear Sir—We desire to congratulate you on the two varieties of Carnations, GEORGIA and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50% to 100% more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain,
Yours truly,
TRAENDLY & SCHENCK, Wholesale Florists.

THE FLORIST'S EXCHANGE, Baltimore, Md.
Franklin and St. Paul Sts.

THE NEW LIGHT PINK CARNATION MAY

You will find in this variety one which you will want to grow in large quantity after you give it a trial. It is one of the few varieties which come in early and keep continually at it until transplanting time. The color is better than Enchantress and the bloom is better than Fair Maid and it is freer than either of them.

We are now sending out fine strong, well-rooted cuttings. Let's have your order now. \$12.00 per 100; \$100.00 per 1000.

Also other new and standard sorts. All the best varieties at current prices. Our stock is in prime condition.

St. Paul.

News Notes.

St. Valentine's Day brought a big demand for violets, red roses and red carnations. Sales were much larger than usual, showing that this day must be reckoned on in future. For Washington's Birthday Holm & Olson had cherry trees made with plum branches and realistic cherries from the milliner. There were very pretty and appropriate center pieces.

The bright weather has brought out an abundance of good blooms, especially in carnations and bulbous stock. Violets, too, have been plentiful and one of the largest growers has been throwing away good flowers on account of having no market for them.

The club met Tuesday evening, February 18, at the City Park Greenhouses, Minneapolis. August S. Swanson read a paper on "The Benefits to be Derived by belonging to the Club." A schedule of prices on bedding plants was reported by the committee appointed at last meeting and adopted by the club. A committee was appointed to meet with the executive committee of the State Fair to urge upon that body the desirability of larger and better space for floral exhibits and larger premiums. In the past the premiums have been so small that very few of the florists thought it worth the time and trouble to compete.

On the invitation of L. L. May the club visited his new seed warehouse on Como avenue, February 26.

Chris. Hussjaeger, who rented his greenhouses to P. and W. Topel a few months since, is now engaged in the saloon business.

Mr. Von Zommerveld of Sassenheim, Holland, was a recent visitor.

Indianapolis.

News Items.

The executive committee of the State Florists' Association at a meeting, February 15, selected an organization to prepare for the American Carnation Society in 1909.

Tomlinson Hall Market reports an exceedingly quiet business; much stock is brought there to be wholesaled at figures below the regular quotations.

A. E. J. Baur is recovering from his recent sickness.

The trip to Richmond, Ind., by the local florists has been deferred another week; more enthusiasm will be awakened in the meantime.

Visitors: Thos. Knipe, Kokomo, Ind.; Richard Coats, Bloomington, Ind.; William Farney of A. L. Randall Company, Chicago; and Wilbur Byers, Franklin, Ind.

DETROIT, MICH.—The heavy blizzards of last week seem to have buried business with the rest of things. Notwithstanding the dark stormy weather flowers are accumulating to the danger point; the only short articles are violets and roses. Tulips clean up well, but all other bulbous stock as well as carnations are a drag. Hardy ferns are in very good demand with a first-class supply; other greens, like asparagus and smilax, are not obtainable now. A brisk demand for wild smilax indicates the execution of many small decorations.

Chas. Warneke is on the mend; his broken ankle has been placed in a cast now.

Your correspondent's left collar bone produces the pains of a growing together and a couple of weeks hence will see him on deck again.

A heavy blizzard last Wednesday brought the regular meeting of the local Florists' Club to naught.

FRANK DANZER.

THE NEW CARNATION

Afterglow

Winner of the following prizes at the Washington Exhibition of the A. C. S. held last week:

The A. C. S. Silver Medal.

The S. A. F. Bronze Medal, for best 100 blooms of Lawson shade of pink.

The Silver Cup, offered by W. J. Vonderheide for the best 100 blooms of any variety to be disseminated in 1908.

Also awarded

GOLD MEDAL by the Rhode Island Horticultural Society at Providence, Nov., 1907. (Exhibited by Wm. Nicholson)

CRAIG SILVER CUP by the Pennsylvania Horticultural Society at Philadelphia, Nov., 1907. (Exhibited by Dailedouze Bros.)

FIRST PRIZE by the St. Louis Horticultural Society at St. Louis, Mo., Nov., 1907. (Exhibited by E. G. Hill Co.)

FIRST PRIZE by the State Florists' Association of Indiana at Indianapolis, Nov., 1907. (Exhibited by the Originator)

SCORED the highest number of points of any seedling exhibited at the Toronto Exhibition of the A. C. S., Jan., 1907, after arriving 24 hours late from Framingham, Mass.

ASIDE from these honors, the fact that it has been grown successfully wherever it has been tried, is the best proof of its commercial value. Orders now booked by the undersigned, to be filled in rotation, for well grown, well rooted cuttings at

\$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.

WILLIAM NICHOLSON, THE E. G. HILL CO., DAILEDOUZE BROS., R. WITTERSTAETTER.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business shows no improvement over last week, prices along all lines being about the same. Some dealers were under the impression that carnations, perhaps, were not quite so heavy a crop as they were the week previous, but so far as we could discover, there were a great many more carnations than were actually needed, and \$2 per 100 was buying the best standard sorts arriving. Roses of all kinds are plentiful enough for what demand there is, though there are no heavy crops in sight as yet. Sweet peas are becoming very plentiful, and on that account prices are tending downward. Tulips, Roman hyacinths and narcissus are all abundant, and, with the exception of an occasional small lot of double pink tulips, prices run from \$1 per 100 down. Lily of the valley is plentiful at \$1.50 per 100. Neither lilies nor callas can be cleared out satisfactorily, the asking price being from 6c. to 3c. each only. Gardenias are in steady supply, though really high-grade growers are not as yet extremely plentiful. Violets are selling very unsatisfactorily; prices seem to run from about 25c. to 40c. per 100, with an occasional sale of a small lot at 50c. Asparagus is a little scarce, but of smilax and adiantum there is a plentiful supply. Lent commences on Wednesday, but if there is any change at all it must be for the better; prices certainly cannot get very much worse.

CHICAGO.—The market is suffering from an oversupply of almost every commodity but American Beauty roses. The general demand for cut flowers has shortened a little and arrivals have increased. No particular reasons are advanced for the decline in demand; it is simply one of those phases of the cut flower business which are occasionally experienced, but which happily, are not of long duration. The almost unprecedented supply of carnations now existing probably furnishes the easiest solution of the problem, and as far as the local business is concerned the correct one. Carnations certainly are a glut, many cleaning up transactions closing below the half dollar mark, and fairly good stock at that. The higher prices within the quotation range above the minimum means strictly fine stock, with privileges of selection as the maximum is reached. A change, however, is looked for in the course of a week or so, as the crop has about reached its full. Tea roses are more plentiful, and prices have been forced down. The quality of the bulk of arrivals is excellent and the new crop promises some grand stock for the period running to Easter. American Beauty roses continue very scarce. Bulbous roses continue very plentiful, and growers' returns in many lines run unpleasantly toward the cost mark. Tubing are weak in price, much stock going off below bottom quotations when slightly deficient in stem. Daffodils drag considerably although generally fine in quality. Paper White narcissus and Roman hyacinths are even slower in movement. Dutch hyacinths are coming in, and move freely because limited in quantity. Callas and multi-florum lilies are very plentiful, and while they clean out fairly well, prices are lower. Violets are doing about the same as last week, but with rather weak prices in the higher grades. Shipping business appears to have decreased in volume, but speedy recovery is looked for.

PHILADELPHIA.—American Beauty roses are quite scarce this week; prices are up to \$6 and \$7.50 per dozen. The demands are mostly from other cities; local stores have not had many sales for these flowers. Tea roses can be bought at from \$1 per 100 upward, the very best stock selling at \$12. Flowers of the new rose Mrs. Jardine are selling at \$3 per dozen. Carnations have dropped in price very much; they are quoted at \$1.50 to \$1 per 100; the price depending entirely on how badly one wants the stock, and, again, if bought in quantity. Enchantress has suffered most in this respect, just now there are entirely too many coming in. Conditions with this variety are similar to those with Mrs. Frances. Just five and six years ago—too many are being grown. For the information of carnation growers we hear of sales this past week of 1000 for \$8, 1000 for \$6, while the flowers carried over three or four days sold 25c. to 50c. per 100. Callas are very good stock now; the demand is good with the supply

falling off. They realize 50c. to 60c. per flower. Cypripediums sell at \$10 to \$12 per 100; sweet peas, 50c. to \$1; daffodils, \$1.50 and \$2; tulips, \$1 to \$2; Paper White narcissus, \$2 to \$3 per 100. Lily brings \$1.50 to \$2 per bunch; Lily of the valley, \$2 to \$1 per 100. Adiantum hybridum, \$1.50 to \$2 per 100; double violets, 50c. per 100.
 DAVID RUST.

BOSTON.—There is a slight improvement in trade generally and hopes are for continued betterment. Prices have not varied much and as a rule they remain practically as they were a week ago. Roses are of excellent quality especially American Beauty, next to which rank Richmond and Killarney, two varieties which have proved great favorites in this market. Bride and Bridesmaid are regarded as common stock and nothing like the fancy prices of the first mentioned can be had for them. Some growers are handling old-fashioned favorites like Bon Silene and Safrano, but there is only a limited demand for them.

Carnations are very abundant and sell at very low figures. Violets have a very good call considering the abundance of other flowers. Sweet peas are good and sell fairly well. Lilies are plentiful, as are callas. Lily of the valley finds a steady demand. Tulips are selling at very low prices; so are all sorts of narcissi. Asparagus Sprengeri is not so plentiful as it has been, but there is abundance of A. plumosus. There is a good call for hardy cut ferns, galax and other hardy evergreens.
 J. W. D.

CHANGES IN BUSINESS.

TEORIA, ILL.—George A. Kuhl, florist, has opened a new store in the Frederick block.

MT. STERLING, KY.—Messrs. Graser & Humphreys have succeeded the Mt. Sterling Floral Company.

HUTCHINSON, KAN.—The Hutchinson Floral Company have moved their downtown office to their greenhouse office, corner B and Poplar.

TYLER, TEX.—The Sneed Nursery & Orchard Company has been chartered with a capital stock of \$43,000; C. W. Wood, J. P. Sneed, Frank Brunton, incorporators.

OWENSBORO, KY.—The Nanz Floral Company has also opened a branch in Central City, to be supplied with flowers and plants from the Owensboro establishment.

PORTLAND, ME.—The firm of Charles Thorley has been incorporated to deal in plants, flowers, etc., capital \$100,000. President, H. L. Crane; treasurer, M. S. Dennison, Portland.

SALT LAKE CITY, UTAH.—Robert Miller has written to the local press announcing his intention to start a rose-growing establishment here, if he can secure sufficient financial support, and is soliciting subscriptions for stock to form a company.

JAMESTOWN, N. D.—A. D. Seekins is finishing his new greenhouse, installing a hot water plant and has built a first-class conservatory. He hopes to start about the first of next month to raise the flowers needed for the local trade and in due time to have a stock on hand to meet all demands.

DOVER, N. H.—Charles L. Howe, the well-known florist, has purchased the business of D. E. Dow of Laconia, which was established twenty-eight years ago, and he will conduct the same in connection with his business in this city. Mr. Howe has also just had built a brand new delivery wagon manufactured by the Dover Carriage Company.

FARGO, N. D.—The reported establishment in Fargo of a branch office of the Phoenix Nursery Company, which is practically tantamount to this city being State headquarters and distributing point, has been consummated and is now an absolute fact. The office is located at room 6, Christianson block, on Broadway, and the local manager is Will H. Sabin. The Phoenix Nursery Company is one of the oldest established nurseries in the United States, being founded at Bloomington, Ill., in 1852, and incorporated in 1890.

Trade Notes.
The past week has been one of unusual activity among the stores, many social functions occurring during the forepart which used expensive flowers. The latter days were saddened by the deaths of Chas. Edrick Wood, of the firm of Wood, Harmon & Company, Bishop H. Y. Satterlee and Congressman Latimer; large orders were sent out from various stores, among them many handsome and expensive designs. The President and Mrs. Roosevelt were among the first to send floral tributes to the Satterlee homestead.

There is sufficient stock to fill all demands with the exception of American Beauty roses and orchids which are quite scarce. February 22, like St. Valentine's Day, passed rather uneventfully so far as benefits to the trade were concerned. Charles McCauley, secretary of the local Florists' Club, suffered a painful accident about a week ago, a nail piercing his foot which resulted in blood poisoning. After having been confined to his home for seven or eight days his condition has improved and he is out of danger.

The Ladies' Auxiliary of the florists' bowling team rolled four games on Thursday night with the following results:

Mrs. Cooke	69	60	71	117
Mrs. McCauley	86	123	102	97
Miss Cooke	93	78	81	108
Mrs. Siddons	61	68	108	75
Mrs. Harty	26	87	97	76
Mrs. Shaffer	126	111	113	136

Tuesday night, March 3, will be the next regular monthly meeting of the Florists' Club, and the annual election of officers for the ensuing year.
JAS. L. CARRERY.

LENOX, MASS.—John O'Brien, 10 West street florist, is seriously ill.

 E. W. Pearson has opened a new store on State street. The smaller store until recently occupied has been given up. The new one is very handsome, having abundance of room to display his stock to the best advantage. Mr. Pearson is highly pleased with the change and reports business good.
 C. J. McGregor does much in outdoor and cemetery work. He has a few well-filled greenhouses of seasonable stock and says business is good in all lines.
 The business of Kent & Marsh is now controlled entirely by Mr. Kent. Carnations and bedding plants are grown. As with all florists in this section of the country, business was said to be as good here as in former years at this season.

Chicago.
The Week's News.
 Business for the past ten days in retail circles has not been very brisk. Of the holidays, St. Valentine's Day only brought extra trade worthy of notice. The birthdays of Lincoln and Washington were unproductive of any noticeable extra demand for flowers, notwithstanding that these holidays came at a time when retail stores were loaded down with carnations and bulbous flowers, which at the time were bought cheap, and were very generally offered to the public at bargain prices. Good carnations at 25 cents per dozen is only one of the many low offers made by retailers in some sections.
 William Desmond, representing L. S. Donaldson Company, and Otto Will, of Will Brothers, Minneapolis, were in town early this week.
 Harry Bayersdorfer and Mrs. Bayersdorfer passed through Chicago on Monday, en route to Philadelphia from California. They made no stay, their home trip being hurried and precipitated on account of the serious illness of Mrs. Bayersdorfer's father.
 T. E. Waters, secretary of the Chicago Florists' Club, 21 East Randolph street, has received a supply of exhibition entry forms for the Spring show of the American Rose Society, to be held in Chicago, March 25, 26 and 27. He will be glad to supply them to all applicants.

G. Klupfer of Nelson & Klupfer, Peoria, Ill., has disposed of his interest in that firm to his partner, who will continue the business. Mr. Klupfer is looking around with a view to establishing himself again in the business.
 Andrew Peterson of Hoopeston, Ill., will erect three additional greenhouses, each 250 feet long, as soon as the building season opens. The glass and other material are already secured.
 The E. F. Winterston Company was handling some fine blooms of Gerbera Jamesoni, last week, and had no difficulty in disposing of them. The concern is also receiving twice a week a small number of carnation blooms from Fritz Bahr, Highland Park, from his benching of Lucille, the new seedling carnation. The flowers move very readily.
 Frank Henry of Henry & Lee, New York, J. A. Peterson and Mrs. Peterson, Cincinnati, and Wm. Dyke representing Ed. Jansen, New York, were visitors last week.
 Guy French, foreman of the carnation range at the Poehlmann establishment, Morton Grove, has returned from his wedding trip, and on Friday evening was presented a handsome cut glass bowl by his men.
 The Heint Brothers of Jacksonville, Ill., have been visiting growers hereabouts. The object of their visit was to look into the question of cement benches, with a view to installing a system in their own establishment.

The A. L. Randall Company have leased the remainder of the floors in the building they occupy, to take possession May 1. This gives them the whole building, excepting the ground floor four floors in all. They will probably extend their cut flower department somewhat, and use three floors for their florists' supply branch, which is to be much extended. They have added glass to their general stock, and will in future carry a supply to meet all ordinary requirements and ship large orders direct from the furnaces. This departure is somewhat of an innovation in supply circles, but the company is already doing some business in the new line.

St. Valentine's Day brought a good deal of extra business to the retail stores, but was not as productive as anticipated, especially for those who made no apparent effort to secure orders. Where the sentiment of the day was pushed by signs and suggestions of floral valentines a good business resulted.

C. M. Dickinson of E. H. Hunt's is back at his desk after several days' confinement to his home through sickness.

Andrew McAdams is on a visit to Melbourne, Fla., being the guest of Mr. and Mrs. Walter G. Goode of that town.

George Reinberg is getting a daily cut of Cattleya Schroederiana from his orchid house.

During the recent snowstorm two of the rose sections of Peter Reinberg's establishment experienced a cave-in, but without much loss to stock.

Samuel J. Pearce, Clybourne avenue, has, as usual, been a large grower of bulbous stock this season, and has furnished the market with a cut grand in quality. His aggregate of bulb planting in the different specialties has approached the quarter million point. Just now he has fine Golden Spur, Emperor and Von Sion in crop; La Reine and Murillo tulips are also seen in quantity, and well colored. He has a splendid stock of Dutch hyacinths in pots, which already are on the move. His preparations for Easter include six houses of lilies, mostly giganteum, and present indications point to fine flowering and foliage stock for the holiday season. The establishment includes three houses of azaleas, all shapely and in excellent condition.

Mr. Hess of Hess & Swoboda, Omaha, Neb., was a visitor on Tuesday.

J. H. Peffer.

Kalamazoo, Mich.

News Items.

We have experienced during the present week one of the worst blizzards on record, which has effectually put a stop to business of all kinds, as for several days the streets and roads have been impassable. You will realize the severity when it is reported that the New York and Chicago flier was stalled in a drift for 13 hours, notwithstanding the efforts of five other engines trying to extricate it. I have not heard of any damage done to our local florists other than the extreme inconvenience experienced.

The Central Nursery & Floral Company has been capitalized at \$50,000 and \$40,200 stock is already issued. The officers are: President and general manager, L. P. Thurston; secretary and treasurer, Jesse L. Sornberger; directors, William E. Fjohm, Victor L. Palmer and L. P. Thurston. Both the officers are practical nurserymen and florists and are in the offices of the company. The firm will eliminate all wholesale growing, except as the same is incidental, and confine its attention to producing ornamentals almost exclusively. As fast as possible it will merge all efforts into the small plant and ornamental catalogue trade.
 S. B.

LENOX, MASS.—The seventh annual banquet of the Horticultural Society was held in Curtis hotel, Saturday, February 15. Covers were laid for ninety guests. Alexander McConachie, a charter member of the society, was toastmaster. Ladies were present this year, and added to the charm of this always enjoyable occasion.

E. Jenkins has gone to England for two months' vacation, during which time he intends visiting some of the old-fashioned gardens of Europe.

Rose and carnation night will be held March 7, when special premiums will be donated by the society, and as carnations are grown quite extensively at Lenox, competition for the various houses will be keen.

New Orleans.

News Items.

The fifth annual meeting of the Louisiana State Horticultural Society will be held at Minden, La., February 20 and 22, when C. W. Eichling, the well-known New Orleans florist, will read a paper on "Roses and Cut Flowers."

There is a project on foot by several prominent New Orleans florists to form a stock company for the purchase of a sugar plantation below the city to grow hardy palms, fruit trees, etc., suitable for the Southern States, on an extensive scale.

Charles Eble had the supplying of the bouquets, etc., for the ball of the Olympians, one of the carnival organizations. The bouquets for the queen and her maids of 1908 were of American Beauty, and for the queen of 1907 and her maid of Easter lilies and lily of the valley. Altogether the order called for 275 bouquets.

Mr. Rutherford, late manager for the Metairie Ridge Nursery Company's store, is on the sick list and has to undergo an operation for appendicitis.

Frank Rieth has leased several lots across the street from his present place, which he will use for outdoor roses and other flowering stock. His crop of callas is looking fine. He finds hotel life rather hard on palms, having to supply one of the largest hotels in this city with plants. So far he has found that *Phenix canariensis* stands the most abuse.

At the monthly meeting of the New Orleans Horticultural Society on February 20, Richard Eichling, grower for C. J. Virgin, exhibited fine Roman and Italian hyacinths with stems of phenomenal length. James Newsham brought some monster calla flowers, and Paul Ahele had an interesting exhibit of sweet peas, from out of doors.

James Newsham stated his intention of sailing in a few days on an orchid collecting trip.

There is so little interest taken in the proposed chrysanthemum show that it is doubtful if the society will hold one this Fall.

At the Metairie Ridge Nursery Company's greenhouses the roses have fully recovered from the setback they got in the Fall from the salt water and are now

 Chillwell Nurseries, Lowdham, Notts.

European Agents for THE AMERICAN CARNATION

producing full crops of fine flowers. American Beauty are especially worthy of notice and Mr. Papworth can well be proud of these strong, robust canes topped by flowers of first quality. This company has made a specialty of forcing lily of the valley this Winter and has disposed of enormous quantities.

The carnival being near at hand the florists are all kept busy, balls and private parties calling for the use of plenty of flowers.

Michael Barker, Chicago, spent several days in New Orleans recently. Dan MacLorie, representing W. A. Manda, was also a recent visitor in the interest of his firm.

Out-of-door sweet peas are becoming quite plentiful and are of good quality. There is to be seen at the markets these times quantities of several varieties of *Narcissus polyanthus*. These are naturalized on the grounds around the old plantation homes, and, being left undisturbed year after year, flower profusely. Another thing much used for cheap bouquets is the single red camellia, an old favorite of the Creole belles of antebellum days. These are seldom spoken of as camellias, but are known as "japonicas." CRESCENT CITY.

St. Louis.

News Notes.

The delegation from the local Florists' Club who attended the Springfield meeting of the Illinois State Florists' Association returned Wednesday morning, much pleased with their trip.

The Michel Plant and Bulb Company held an auction sale of plants the past week at its greenhouses on Magnolia avenue. A good representation of local florists was on hand when the sale began, and the company disposed of a great lot of surplus stock in palms, ferns and other decorative plants.

Alex. Johnson, the Wellston florist, who has a retail store at 6103 Easton avenue, is having a good run of trade. James M. North, son of the late Joseph North, is manager of the Easton avenue store.

Adolph Friemel, nephew of A. Brix, is now in charge of the latter's greenhouses.

Charles Kuehn is receiving each day consignments of extra fine tulips and other bulbous stock. This place is also headquarters for extra quality carnations.

Henry Berning's supply of violets, carnations and roses was large the past week. Violets are supreme here, fresh from Kirkwood growers each morning.

Charles C. Young, oldest son of James Young of the C. Young & Sons Company, was married on Saturday, February 22, to Miss Katherine Courtney. The young couple will spend a three weeks' honeymoon in Florida.

The St. Louis Horticultural Society has fixed the dates March 10 to 12 for its Spring flower show. The exhibition will be held in the same hall as last year—the Masonic Temple, Grand avenue. The local Florists' Club at its last meeting decided to lend help through its trustees. Any one wishing a premium list should apply to O. G. Koenig, the secretary of the society, whose address is 6473 Florissant avenue.

Secretary Bentzen of the Florists' Club is at work on the premium list for the club's rose show, which will be held Thursday afternoon, March 12, after which a supper will be served in the café below the meeting hall. The trustees are instructed to invite all visitors in town who will be here to attend the Spring flower show, given by the Horticultural Society.

Mr. Abrahamson, representing E. H. Hunt, Chicago, arrived in town Monday morning. ST. PATRICK.

New Haven, Conn.

The employees of the Frank S. Platt Company, along with the officers of the firm, had a very enjoyable outing on February 17, 1908—a trolley ride by moonlight to the Old Colonial inn at Woodmont, where they found a table spread with numerous good things, which were thoroughly enjoyed by the 21 participants. Story telling, music, and dancing were indulged in subsequently. Miss Weiser, bookkeeper, acted as pianist, and several young ladies rendered vocal selections. A solo by Mr. Platt, president of the concern, was much appreciated. The affair was unanimously pronounced a great success.

Columbus, O.

Trade News.

Local florists have had some very busy times since the New Year. Some of them state that their January business was equal to that of the December preceding. This, while rather unusual, was admitted to be the result of the work of the grim reaper. With a great many bright days in this section during the past few weeks blooms have developed well, so that stock has been in good supply, with prices generally satisfactory.

Gustave Drobisch has had an interesting case on his hands (not so interesting to him, however). A neighbor has brought suit against him for damages to her property, real and personal, alleged to have been caused by the smoke from his greenhouses. At present it is a drawn battle, he having paid the costs up to date and the plaintiff having agreed to wait the outcome of this season's improvements in the "smoke consuming" line.

Preliminary sketches for the suggested parks and boulevards in connection with the general plan for civic improvement in Columbus, have been forwarded here and will be taken up soon by the local authorities and also the Legislature, as the plans concern the improvement, also, of the State House and grounds.

Mr. A. Pharo Gage, landscape artist, did a good turn in the line of floral education by an interesting and instructive lecture on "Roses, Their Varieties, Culture," etc., delivered last week before a prominent ladies' society.

The City Council has appropriated about \$6,000 for the erection of a new greenhouse in Schiller Park.

Mr. and Mrs. Walter Jones have sold out their retail store to Robert Schenck, from Pittsburg. Mr. Schenck, who is a florist of long experience and a courteous gentleman, will be a welcome addition to the local ranks.

Club Doings.

The members of the Columbus Florists' Club are making the most of the winter season in providing some very enjoyable social affairs. Among these was a dance given at the club room on Town street recently, while another similar event on a larger scale is being arranged for the near future. The members have also accepted with thanks invitations from an out-of-town member, Mrs. W. F. Griswold of Worthington and Messrs. Metzmaier & Son, of South Fourth street, city, who will entertain them respectively on the dates of the next two regular meetings.

At the meeting of last Tuesday evening the club decided to try to cut something of a figure in bowling circles hereafter, and accordingly proceeded to organize a team which will surely be heard from with credit at some future gatherings of the craft. The officers chosen were: Captain, Jacob Reichert; secretary, William Metzmaier; treasurer, James McKellar. C. D. B.

Utica, N. Y.

News Notes.

The Utica Florists' Club will hold its seventh annual carnation meeting on February 27 at Elk's Hall, after which members will enjoy a smoker. Indications point to a large meeting of the club; nearly all the growers of new carnations have signified their intention of sending us flowers.

S. S. Skidelsky was calling on the trade this week; he also made a trip to Barneveld and left here for Watertown and Rochester, thence west to Chicago.

Louis Guillaume, Syracuse, was in town Sunday and Monday; he is a grower of carnations to quite a great extent in Onondaga Valley.

L. E. Marquisee, Syracuse, was also a visitor last week; he has fully recovered from his recent accident.

J. R. Auld has bought the place formerly run by Mr. McGowan and has torn it down and moved it to New Hartford where he expects to build in the Spring.

A delegation from Scranton, Pa., of the following gentlemen: T. B. McClintock, Lee McClintock, Johnathan Rodham, Lewis Morel, A. Smith, Wm. McDonald and B. E. Coakley had just returned from Barneveld where they had been to see Apple Blossom and Wano-Ka carnations at home. They were very much pleased with these varieties. Inspections were also made of the establishments of the Utica florists.

Los Angeles, Cal.

News Notes.

Copious rains that have watered this coast since January 20 and mild weather have made ideal conditions for the production of violets, field-grown (no one ever thinks of growing a violet under cover in this country), and the quantities put upon the market are unprecedented. The wholesale and retail prices in this market are in marked contrast to those that prevail in the East. Forty cents per dozen bunches, 100 flowers in a bunch, is the wholesale price at this time, February 15. Thrifty Italian street vendors re-bunch the blooms, put 75 to 80 flowers in a bunch and sell them at two bunches for 15 cents. Flower shops do not condescend to such low prices; neither do they put up the flowers in the poor form the curbstone merchant does.

The Signal Hill Floral Company alone pick from 800 to 1200 dozen bunches daily. The Rising and Dunscomb Company, Inc., produce nearly the same number on their acreage; Japs and other growers with less acreage bring the combined output of this flower in and about Los Angeles to enormous quantities.

D. MacKorie, representing W. A. Manda, Inc., South Orange, N. J., is on this coast in the interest of the firm, and if his order book is any indication of the financial condition of the plant and cut flower trade through the South and Southwest, it certainly is in a very prosperous condition. This is his first visit to California and it is a revelation to him to see subjects that are diminutive in size as they are grown in pots under glass in the East attain the size of forest trees of the Atlantic coast.

The chrysanthemum establishment at North Pomona of the late W. W. Marugg will be carried on by his mother. These specialists have done more than all other agencies combined in Southern California to educate the public in the cultivation of fine chrysanthemums.

The first frost of the season and a light one at that, visited us the night of February 12.

Erythrina caffra and E. corallodendron, now in bloom, are worth a trip across the continent to see. Trees with spreading tops of 20 to 40 feet, their bright vermilion-colored flowers borne in great profusion, are beautiful beyond description. These drought-resistant trees and shrubs are easily propagated from hard wood cuttings placed in sand in full sunlight, and kept damp. They bear seed sparingly, which germinates readily.

P. D. B.

Boston

The Week's News.

The annual Spring show of the Massachusetts Horticultural Society will be held this year on Friday, Saturday, Sunday and Monday, March 20-23. This is one of the most important exhibitions of the season and the keeping of it open on Monday, or one day longer than formerly, is an experiment well worth trying.

On March 7 the lecture at Horticultural Hall will be on "Agricultural Education in Public Schools" by President Kenyon L. Butterfield of Amherst College.

The Park street flower market bowling team has organized as follows: Crowley, captain, Nicholson, Peirce, Sutermeister and Patterson. They challenge any other team in the trade and are particularly anxious to meet the Galvin team.

William Cleary of Watertown is having a fine cut of cattleyas at present.

George Solomon is happy over the arrival of a baby boy at his home on Washington's Birthday.

D. F. Roy has removed from Malden where he has been located for so many years; his address will now be "The Moorings," Marion, Mass.

The Waban Rose Conservatories are having an extra fine cut of American Beauty roses at present. They have also exceptionally fine Killarney. They are working up a large stock of their

A New Style of Hotbed.

Talk about being up-to-date, there is some talk prevalent among the Irondequoit gardeners, as to the best kind of hotbeds, to germinate seed quickly. One gardener has them all beat. He spoke thus: "If you want to get your muskmelons started early the coming season, put your seed to soak over night in a rag. Next morning put them under your setting ben, keep the rag moist, and your seeds will all be sprouted in three or four days. Just try it. You know it is all in getting the seed to sprout."—Market Growers' Journal.

HITCHINGS & COMPANY

1170 BROADWAY, NEW YORK

Newport, R. I.

News Notes.

From a contemporary publication we learn that before the advent of another year the Newport Horticultural Society will be in the enviable position of owning a building for the holding of exhibitions and for various other laudable purposes. The consummation of such a devoutly wished state of affairs in so short a time appears only in dreams, but that it will some time come to pass is confidently expected. A building such as would be in any way serviceable for the society would cost a large amount of money and although there exists in the treasury a nucleus for a fund for building it is increasing so slowly that efforts to obtain the necessary amount must be directed along other lines. The best suggestion yet offered is that of forming a stock company and asking those of the Summer residents who have permanent interests in Newport to subscribe, and at the same time expect that the members of the society themselves subscribe liberally. The majority of the members are not disposed to obtain a building by means of charity in any form. With the dawn of an era of happier times a vigorous movement for a new hall will be made—but not this year.

Mr. Folger of the Bonnie Brae Nursery Company is now in Newport in the interests of the firm he represents.

Thomas Knight of Knight & Struck announces his intention of making his first visit to Newport since he has embarked in business, this week.

The Geo. A. Weaver Company is receiving large consignments of seeds and fertilizers.

William Galvin, who has been ill for some time, is rapidly recovering and able to attend to business.

W. Sage is now installed as superintendent for Alfred G. Vanderbilt at Oakland Farm, Portsmouth, R. I. Mr. Sage succeeded Alex. Adam, who is now in a similar position on the Taylor estate at Islip, L. I.

The executive committee of the Newport Horticultural Society has completed the schedule of premiums for the society's rose show, which will be held during the latter part of June or the first week of July.

There will be a great deal of Boddington's giant cosmos, Lady Lenox, planted in Newport this year.

The catalogues are coming in thick and fast and, strange as it may seem, their appearance gives no impression of hard times existing or in prospect; on the contrary, nearly all of them convey the impression that the houses sending them out are more than ordinarily prosperous.

The seventieth anniversary edition of Henry A. Brewer's Year Book is particularly handsome, complete and comprehensive and offers, as usual, many novel things. There is also a very noticeable improvement over former years in the catalogue just issued by Messrs. R. & J. Parquhar & Company; this firm makes a special display in offering for sale plants of dahlia Charles Lanier, and there is no questioning the firm's good faith and reliability in all that is said in praise of this really superb dahlia. D. M.

A Trip to Tiffin and Fostoria, O.

The attendance at our club meetings has been gradually getting less and life was flickering, when something had to be done to wake the boys up again. J. L. Schiller hit upon the idea of getting several numbers together in order to visit notable places out of town and in town on different days, and it is hoped that this will again bring some life into the club. We had to give up our old club room, as the treasury was very low, and we will meet at the different establishments of our members, thereby saving room rent and we believe drawing a better attendance.

A trip to Tiffin and Fostoria was the first one planned and on Sunday of last week eight of our craft took in this outing. We went by rail to Fostoria, where E. R. Sackett greeted us, piloting us by trolley to Tiffin to inspect the greenhouses of the late Louis Ullrich, now conducted very ably by his three boys. They took us through the houses, which were a revelation. The order at this place is away beyond anything we can show in Toledo, and the stock shows the skill of a careful grower. All the plants needed in a retail place of a fair-sized town are grown and as thriving a cut flower shipping business is done as 75,000 feet of glass are capable of. Carnations were in several small houses and filled the large house of latest construction, which is about 40x250 feet. All the stock looked well and being housed early in the season has given so far a satisfactory return. The cold storage houses for bulbs and cut flowers are very commodious and appropriate.

After refreshments had been liberally passed around the new store was visited; from here we were led to a hotel, where an elaborate dinner was served. We then boarded a car to Fostoria, the Ullrich boys joining us.

The greenhouses of the Fostoria Floral Company (E. R. Sackett, proprietor) cover about 60,000 feet, and Mr. Sackett has ordered all the material for four more new houses and intends to start building within a few weeks. Stock for retail trade is grown here as well, but the principal business is that of growing roses and carnations. It is doubtful if better stock can be found anywhere. A house containing Enchantress was a sight and the bursting of the calyx was not evident, though this is a constant complaint of our Toledo florists, and the color was just right. Mr. Sackett is especially fortunate with Golden Gate roses; long, strong-stemmed flowers are cut in a very large proportion. Bride and Bridesmaid were also excellent, but Richmond does not seem to like it so well.

It is our belief that such visits are of great benefit; one can always learn something new, and it cements good fellowship and gives pleasant hours, which impress themselves everlastingly on both parties. Scn.

Toledo, O.

FIRES.

TORONTO, ONT.—On February 18, 1908, fire in the store of D. J. Sinclair, florist, at 69 Bay street, did damage to the extent of \$5,000. The origin of the fire is unknown.

Heating.

Growers' Problems Solved by U. G. Scollay.

I am building a greenhouse 33x100 feet for carnations; three foot sides of glass, side ventilation, ridge 15 ft. high. I would like to know the best way to pipe this house. I am in favor of solid beds and want to pipe accordingly. Please state number of pipes in coils and where the coils are best placed; also tell me how big a boiler (hot water) it would take to carry 55 degrees at night zero weather. Where would be the best place for the boiler—on west or east end of house—and how much lower would it have to be than the ground floor of the house?

Mass. W. F. E. —Assuming that you carry out your plan of solid beds and for a 33 foot house that you will have five beds, I suggest 23 lines of 2-inch pipe or its equivalent in heating coils. As houses of this description usually have a pathway under the eave you will place on the north side wall four pipes and on the south side wall three pipes. On the four outer beds you could place four 2-inch pipes, two on each side. The center bed will require no pipes. I would suggest that if these beds are made of concrete you try to arrange the pipe hooks solid in the bed to make a more durable job. These pipes, you will understand, will all be one above the other. As you will approximate 1400 square feet of heating surface, not in-

cluding the mains, I would recommend a boiler, for good work and economy, of 2,000 feet 4-inch pipe capacity. Start the mains at the boiler at least 4-inch and gradually reduce to the outer coils on the wall to not less than 2 1-2-inch. This layout is assuming that you can make a boiler pit at least 7 feet deep and that the main can run below the grade of the doorway across the west end of the house. You will require then no overhead mains, which in my opinion are no advantage. The west end will be the best position for the boiler, and you can place it toward the north side of the house. The connections to the coils on each of the benches, both flow and return, should be 2 1-2-inch. If you cannot get special fittings for this it will be easy to arrange connections, both flow and return, for the two flows and two returns of the coils, by using a tee in combination with elbow, tee to be 2 1-2 x 2 x 2. I suggest this 2 1-2-inch main for the bench coils because in my opinion 2-inch is rather small. Be sure and properly vent the ends of the pipe coils and follow other instructions that have been given for such work in previous articles. U. G. SCOLLAY.

VOL. XXV. NO. 10 NEW YORK AND CHICAGO, MARCH 7, 1908 One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

ESCANABA, MICH.—C. Peterson & Sons, florists, have installed a seed department, carrying a full line of field, flower and garden seeds.

SEDALIA, MO.—Archias' Seed Store says: "Our trade so far is entirely satisfactory, being about 30 per cent. better than that of the first 25 days in February, 1907. We attribute this largely to open weather and the fact that we have mailed ten thousand more catalogues than we did last season."

CANADA BUYS SEEDS IN THE UNITED STATES.—Four-fifths of the wheat and oats for seeding purposes, for which \$1,000,000 was appropriated by the Dominion Government, will be purchased in the United States. Large orders have been placed in Ohio, Illinois, Minnesota, Iowa and Nebraska.—N. Y. Sun.

IMPORTS OF SEED, ETC.—February 25.—H. H. Berger & Company, two cases bulbs. February 26.—H. Frank Darrow, one bag seed. February 27.—Yokohama Nursery Company, 20 cases garden seed; McHutchison & Company, 12 cases plants. February 29 and March 1.—O. G. Hempstead & Son, seven packages plants, etc.; Vaughan's Seed Store, two packages seed; Muller, Schalk & Company, 20 bags seed; F. B. Vandegrift & Company, 16 packages seed, etc.; McHutchison & Company, 48 cases plants; C. B. Richards & Company, 86 packages plants, etc.; G. W. Sheldon & Company, 15 packages trees, etc.; F. B. Vandegrift & Company, 30 packages plants, etc.; P. H. Petry Company, nine cases plants; Pitt & Scott, nine cases plants.

MOH PESTS AND FREE SEEDS.—The House Committee on Agriculture at Washington has voted to increase the appropriation to fight gypsy and brown tail moths in New England from \$150,000 to \$250,000, and this latter item is now included in the agricultural appropriation bill. The committee also voted to include in the bill the usual appropriation for free seed distribution, which was stricken from the bill several years while former Representative Wadsworth of New York was chairman of the committee. Some of the members sought to defeat the seed proposition this year, but failed to do so. They did succeed, however, in reducing the number of packages of seeds allowed the Secretary of Agriculture from one-sixth to one-twentieth of the whole number of packages. The effect of this action is to give members of Congress a larger number of packages. Meriden (Conn.) Journal.

THE FAILURE OF THE CLOVER CROP.—There are two principal reasons for the failure of the clover crop, which is becoming increasingly frequent in eastern and southern Ohio. The first is exhaustion of the soil supply of lime, the second is a fungous disease of the plant. In old fields lying upon sandstones, in which the clover makes a weak and patchy growth, mostly dying out the next winter after seeding and being replaced by sorrel, a deficiency of lime is to be suspected, and farmers who are located upon such lands should write for a...

tion on liming the soil, published by the Ohio Experiment Station, at Wooster.

Where the clover fails on limestone soils disease is probably the cause, and for this no remedy is known except to substitute mammoth or alsike clover for the common red. The alsike has proved a very good substitute at the Ohio Station. Its seed is much smaller than that of red clover, and at present is lower in price. A bushel of alsike will sow nearly as much land as two bushels of red or mammoth. The alsike is not only more resistant to disease, but also endures soil acidity better than the red, and the Ohio Station has adopted the plan of mixing the two varieties. On very acid soils, that have not been limed and which should be sown to clover this Spring, it is probable that it would be economy to sow the alsike clover alone; but all such soils should be limed at the earliest practicable date, for the benefit of other crops as well as clover.

Seed Trade Notes.

The last week of February cannot be said to have given very much satisfaction to the seed trade in general as regards the business done. As was expected we all started the week after Washington's Birthday with especially large mails (the accumulations of the double holidays of Saturday and Sunday); this circumstance instilled considerable real activity into trade for a couple of days; but the weather continuing persistently severely cold for the season, we are, on the whole, not nearly so busy proportionately as we were in January. There are signs that we are not to have a normal Spring this year; that is, an average early one. Already from the South comes the report that in several sections early planted tomatoes and cucumbers have been killed by hard and most unseasonable frosts, the cold lasting so long that the ground became thoroughly frozen, and the usual coverings availed nothing. When it does warm up, we shall surely have a fearful rush of orders in every department, but there have been very few real busy days as yet.

Onion sets are having more than usual good sales, at both wholesale and retail; the best samples of white sets are firmly held at \$3.25 to \$3.50 per bushel, yellow and red sorts at \$2.50 to \$2.75. As regards the increased sales of onion sets at retail, I am convinced that these, during the last few years, have been greatly encouraged, since the custom became general of selling white sets at 25c, and yellow and red at 20c, and even less a quart.

It is turning out that many varieties of flower seeds are exceedingly short; the shortages are, however, so scattered throughout the list that the inconvenience will be very slight as compared with the trouble over the deficiencies in the vegetable line. A stock of flower seeds differs very materially from the vegetable seed stock, in that the great majority of flower seeds are sold in mixtures, which allows a crop failure here and there of some specific sort without much hurt. It is not so with the vegetable seeds; every shortage marks a distinct loss of business and much disappointment to the planter.

Apocryphal of flower seeds, it would be only natural if prices should advance quite materially during the next few seasons, and hold the advances, too; for it seems to me that the perfectly enormous quantities that are annually being distributed by the children's garden societies in all our large cities are most wonderfully encouraging the planting of flower gardens; in connection with which, when you consider that as high as a half million packets of flower seeds have been distributed yearly in a single city in this work, it will be plain that the seeds needed to carry along this children's gardening plan are in themselves a huge quantity.

European Notes.

The writer observes, with pleasure, the new and most appropriate addition to the title of these humble efforts of his pen to record the changing movements in that which concerns our joint interests on both sides the Atlantic. If there is any truth in folklore the coming season should be one of the best on record, for the month just closing has been "February ill dyke" with a vengeance. Already more than double the average

Special Sizes Made to Order.

rainfall to date has been recorded, and sowing operations which were unusually early in many districts have been altogether suspended. As the weather continues unhealthfully mild no great harm appears to have been done.

Quite a revival has taken place in the onion seed trade, particularly for the yellow and brown globe-shaped varieties; even the yellow Zittau is in moderately good demand, but French-grown straw-colored or yellow Strasburg is quoted to-day at one-third the price demanded early in October. The most popular variety is Ailsa Craig, in spite of its prohibitive price. This is not to be wondered at when specimens weighing two or three pounds each can be easily grown from Springsown seed. Many of these have been exhibited during the present month in the most perfect condition.

That malicious microbe, "la grippe," is having a most successful innings just now and has bowled over some of our folks who are well known on your side. Fortunately not many deaths are reported, but I. T. Huggins, A. Wallis, S. B. Dicks and a few more of the stalwarts have had a tough fight.

EUROPEAN SEEDS.

CATALOGUES RECEIVED.

J. E. ROSENFELD, West Point, Neb.—Wholesale Price List of Peonies; a comprehensive collection.

A. LEUTHY & COMPANY, Roslindale, Mass.—Wholesale Price List of Palms, Ferns, Decorative Foliage and Flowering Plants.

HARVEY B. SNOW, Camden, N. Y.—Annual List of Tested Seeds. Illustrated. Special offers are a feature of this catalogue.

ROSS BROTHERS, Worcester, Mass.—Illustrated Catalogue of Farm and Garden Seeds and Supplies, including interesting lists of Novelties and Specialties.

W. ATLEE BURPEE & COMPANY, Philadelphia, Pa.—Price Supplement for 1908, showing the many places where the products of Burpee's seed have excelled at exhibitions.

J.—Illustrated Catalogue of Vegetable, Field and Flower Seeds, Implements, Insecticides, Poultry Supplies, etc. In the lower seed department of the catalogue are given interesting tables, showing hardiness and duration, height, color and description of each of the subjects enumerated.

WILLIAM H. MOON COMPANY, Morrisville, Pa.—Catalogue of Hardy Trees and Plants for Every Place and Purpose. An interesting and beautifully illustrated catalogue replete with valuable information. This firm was established 36 years ago by William H. Moon, with 20 acres of trees; to-day the concern owns and operates upward of 300 acres. "Moon's Trees are growing in every State and Territory of the Union."

STORRS & HARRISON COMPANY, Painesville, O.—Catalogue of Fruit and

Ornamental Trees, Shrubs, Roses, and Bulbs. These nurseries now embrace over a thousand acres of various kinds of soils, enabling the firm to grow its extensive assortment of fruit and ornamental stock, and to plant each kind in environments especially adapted to its best development. The catalogue is replete with valuable offerings and instructive information.

ELLWANGER & BARRY, Rochester, N. Y.—General Catalogue for 1908. This is a most interesting and comprehensive catalogue, profusely illustrated with halitone engravings. Part I is devoted to Fruits and Small Fruits; Part II to Ornamental Trees, Shrubs, Peonies, Hardy Border Plants, etc.; Part III to Roses. Accompanying the catalogue the firm is distributing a most instructive pamphlet on "How to Have Roses; the Best Sorts to Grow," prepared by William C. Barry.

THOMAS MEEHAN & SONS, INC., Germantown, Philadelphia, Pa.—Manual of Outdoor Plants, being a comprehensive enumeration of Trees, Shrubs, Evergreens, Vines and Climbers, Ornamental Hedge Plants, Fruit Trees, Small Fruits and Nuts, Perennials, etc. This firm was founded by the late Thomas Meehan fifty-three years ago. There are now some 280 acres necessary for its varied plantings. The catalogue is profusely illustrated and great care has been exercised to give the correct nomenclature, which renders the catalogue very valuable as a work of reference. A host of useful information is likewise furnished.

DREER DAHLIAS

We can still furnish in strong undivided field-grown roots the following varieties of Dahlias. All of these are first-class sorts of their respective types and colors and strictly true to name.

Varieties specially suited for cut flower purposes are marked with an asterisk (*)

CACTUS DAHLIAS

*Abbon. A large, long straight petalled pure white flower with creamy centre of approved form	Doz. 1.00	\$2.50	\$15.00
*Aegir. Rich, warm cardinal-red, with peculiarly twisted petals	1.00	8.00	
*Amos Perry. Flowers very large, with long, tubular petals. Color fiery red; one of the earliest and freest flowering	2.50	15.00	
*Atilia. Tender mauve pink on the edges passing to a creamy white centre, a beautiful Dahlia of large size and excellent form	2.50	15.00	
*All Heidelberg. Fine orange-scarlet	.85	6.00	
Arachne (The Spider Dahlia). White edged crimson with peculiarly twisted petals; very variable	.85	6.00	
*Bessie Mitchell. A fine flower of strong stems, apricot orange shading to a reddish centre	1.25	10.00	
*Coronation. Glowing red; a medium-sized flower of fine form; splendid for cutting	2.50	15.00	
Comet. Delicate lilac, pencilled, spotted and striped with tyrian rose	1.25	10.00	
*Carmen Sylvia. Soft, rosy-carmine, shading lighter to the centre	1.25	10.00	
Charm. Centre petals white edged with pale yellow, the outer petals gradually changing to a light blush edged with salmon	1.25	10.00	
*Chara G. Stredwick. A splendidly formed flower of very large size, color shrimp pink shading to salmon-red in centre	1.25	10.00	
*Cupstan. Soft orange-scarlet, shaded apricot, remarkably free flowering	1.00	8.00	
*Cornucopia. Vermilion with carmine shadings long, narrow petals	1.00	8.00	
Dainty. Ground color lemon-yellow, shading to a soft, glowing gold rose with tip of yellow; truly dainty	1.25	10.00	
*Else. A charming variety, with a combination of delicate colors. The base of the petals is of buttercup-yellow, gradually passing to amber, finished with a tip of tyrian rose	2.50	15.00	
Earl of Pembroke. Bright plum color; a royal shade	1.00	8.00	
Exquisite. Fine pure orange-scarlet with salmon shadings	1.00	8.00	
*Firebrand. Rich, glowing vermilion, shading deeper	1.00	8.00	
F. A. Wellesly. Brilliant blood-red suffused with carmine	1.25	10.00	
*Floradora. A remarkably free-flowering, bright blood red	1.25	10.00	
*Florence M. Stredwick. Pure white, of large size and perfect form	1.25	10.00	
*Fruite. Peaches and cream describes the color of this beauty; a pleasing soft rose-pink passing to a cream centre	1.25	10.00	
Freigibigkeit. Rich glowing scarlet	.85	6.00	
*Fran Hermine Marv. Beautiful La France pink, a fine cut flower	2.50	15.00	
*Flora. An ideal white Cactus Dahlia. A large, heavy flower, produced on stout, stiff stems, makes it valuable for cutting	2.50	15.00	
*Gabriel. Creamy white, edged with vermilion; an improvement on the "Spider Dahlia" Arachne	1.25	10.00	
Gen. French. A good-sized flower of good form, of a pleasing terra-cotta	1.25	10.00	
Galliard. Rich, glowing scarlet, with long, tubular petals	1.00	8.00	
Gellert. Full, double, of fine form; scarlet, shading to ruby at base of petals	1.00	8.00	
*Gen. Buller. Cardinal red, each petal tipped with white	1.00	8.00	
*Gottelinde. Primrose-yellow, of fine form	1.00	8.00	
Graf Waldseeck. Delicate rose suffused with pink	.85	6.00	
Hans Sachs. Bright cherry red	.85	6.00	
*Harbor Light. Brilliant cochineal-red, with a stripe of reddish-apricot through the centre of each petal. The coloring is variable, sometimes the light, at others the dark color, predominating, but beautiful in either form	2.50	15.00	
*H. W. Sillem. A brilliant, rich, cardinal-red, with deeper shading, flowers of perfect form, and frequently measuring 7 inches in diameter	2.50	15.00	
Hohenzollern. Rich bronzy orange-red, with gold sheen	1.00	8.00	
Horn of Plenty. Deep carmine-purple, flowers large, long, narrow, twisted petals cleft on ends	1.00	8.00	
Imperial. Large-sized flower of deep currant-red, with deeper shadings	2.50	15.00	
Island Queen. Soft lavender pink	.85	6.00	
J. Bryant. Deep yellow at base, passing to pale yellow with reddish streaks	.85	6.00	
J. W. Wilkison. Rich ruby of fine form	.85	6.00	
*J. H. Jackson. Brilliant crimson-maroon; very free	1.25	10.00	
Kingfisher. Carmine-purple, long, narrow petals and finely formed	1.25	10.00	
*Kriemhilde. The most popular cut flower variety grown to-day, perfect flowers on long stems; color a brilliant pink, gradually shading to white at the centre	1.00	8.00	
Landrath Dr. Schiffr. A most pleasing shade of apricot suffused with rose	1.00	8.00	
*Lauretta. Base of petals deep amber-yellow, passing to apricot and old-rose on the edges; an attractive combination	2.50	15.00	
*Lenax. Ground color coral-red, suffused with apricot, shading to salmon-rose on the edges as the flower matures	2.50	15.00	
Lady Edmund Talbot. Coral red with rosy shadings	.85	6.00	
Lodestone. Orange-scarlet, large and free	.85	6.00	
Minnie West. Canary-yellow in centre, gradually shading to white at tips; a good, large flower	2.50	15.00	
Magnificence. A pretty Dahlia, ground color capucine-lake, passing to salmon-rose at the tips	1.25	10.00	
Mrs. H. L. Brousson. Large, perfect flowers of a delicate tint of salmon on a yellow ground	1.25	10.00	
Mabel Tulloch. Soft violet-rose with yellow shadings at the base of the petals	1.25	10.00	
*Mary Service. Apricot, shaded orange, shading to purplish-rose at the tips; a well-formed flower, and a free and continuous bloomer	1.00	8.00	

Mrs. H. J. Jones. Very large, perfect, rich, bright scarlet with cream colored edge, occasionally comes soft colored	Doz. 1.00	\$8.00	
Mrs. Carter Page. Glowing deep carmine	.85	6.00	
Mrs. Moore. Fine deep claret	.85	6.00	
Mrs. Jowett. Brilliant reddish salmon	.85	6.00	
Obli. Rich crimson-carmine of fine form	1.00	8.00	
Perse. Free-flowering, pure white	.85	6.00	
Rosine. Glowing crimson with purple shading	.85	6.00	
Reliable. A very large, bold, striking flower, of a pleasing madder-carmine, suffused with salmon and yellow	2.50	15.00	
Ringdove. Salmon-carmine centre with yellow shadings, passing to white on the edges; very variable, but always pretty	1.00	8.00	
Ruby. Deep vermilion centre, shading to ruby-red at the edge of the petals; a rich pleasing color	1.00	8.00	
*Ruekert. A superb flower of perfect form, a brilliant blood-red with darker shadings	1.00	8.00	
*Rakete. Rich glowing, fiery-red, of good form	1.25	10.00	
*Standard Bearer. Rich, fiery-scarlet, very free, and of perfect form	1.25	10.00	
*Stern. A beautiful pure lemon yellow, very free and one of the best yellows for cutting	2.50	15.00	
*Shooting Star. (Stern-schnuppe) Good-sized flowers, of regular form, produced on stout stems held well above the foliage. Color pure golden yellow; entirely distinct	2.50	15.00	
*Thuringia. Flowers very large, and always of good form; of a brilliant fiery-red color. A remarkably free bloomer	2.50	15.00	
Uberfluss. Brilliant geranium red	1.00	8.00	

*Bon Ton. A beautifully formed flower of large size, a rich garnet	1.25	10.00	
Chameleon. Fine colored centre, shading to crusted strawberry with yellowish blending of colorable flower	1.25	10.00	
Duchess of Cambridge. Base of petals white suffused pink, heavily tipped dark crimson	1.25	10.00	
Emily. Very large, with white markings	1.25	10.00	
Elegance. Tinted rose, tipped white	1.25	10.00	
Fern-Leafed Beauty. White, each petal edged with dark carmine-red	1.25	10.00	
*Frank Smith. Intense purplish-maroon shading almost to black, each petal tipped with white. The most perfect fancy Dahlia	1.25	10.00	
*Fanny Purchase. A fine deep yellow	1.25	10.00	
*Grand Duke Alexis. Large, massive flowers, ivory white with a faint tinge of rose at the extremities of the petals	1.00	8.00	
*John Thorpe. Solferino rose, of perfect form	1.25	10.00	
Keystone. Light rose, spotted and striped crimson	1.25	10.00	
*Miss Browning. Primrose yellow tipped with white	1.25	10.00	
*Miss May Loomis. White, suffused with soft rose	1.25	10.00	
Mrs. Stancovich. Straw yellow, suffused amber, striped red and mottled, and tipped blush	1.25	10.00	
Olympia. Bright rose pink, striped, spotted and pencilled crimson	1.25	10.00	
*Queen Victoria. Handsome bright yellow, beautifully quilled	1.00	8.00	
*Queen of Yellows. Beautiful primrose yellow	1.25	10.00	
*Red Hussar. Pure cardinal red; perfect form	1.25	10.00	
Ruth. Pure white with faint tint of blush on edges	1.00	8.00	
Striped Banner. Cardinal red, striped white	1.25	10.00	
Thos. Westcott. Fiery red, tipped white; very profuse	1.25	10.00	
One each of the 33 varieties for \$2.50.			

NEW PAEONY-FLOWERED DAHLIAS

This new type of Dahlias originated in Holland, and promises to become very popular. The artistic flowers are very large, from 6 to 8 inches across, and are best compared to the semi-double paeonies in general form. They all flower very freely, and are borne on long, strong stems, making excellent material for cuttings, as well as for garden decoration.

- *Germania. Brilliant strawberry red, a very fluffy, artistic flower, standing well above the foliage, producing a very gay effect. 25 cts. each; \$2.50 per doz.
- *Glory of Baarn. Very large, loosely arranged flower of soft hortensta-rose color. 25 cts. each; \$3.50 per doz.
- *Queen Emma. A magnificent sort that appears almost artificial; it is of a charming shade of mallow or Hollyhock pink, the inner petals banded with gold. 25 cts. each; \$2.50 per doz.
- *Queen Wilhelmina. Immense, fluffy flower of pure white with yellow centre. 35 cts. each; \$3.50 per doz.

The set of 4 varieties for \$1.00.

TWELVE CHOICE DOUBLE POMPON DAHLIAS

- Alets Imperial. Creamy white, tipped analine red.
- Darkness. Deep velvety maroon.
- Elegante. Soft pink, tipped deep pink; reflex light pink.
- *Gold Hauchen. Pure primrose yellow.
- Kleine Domitica. Orange buff; always in flower.
- Little Bessie. Creamy white, quilled petals.
- Little Herman. Deep carmine, shaded garnet, tipped white.
- Little Naind. White, tipped amaranth red.
- Little Prince. Deep currant red, tipped white.
- Lon Kramer. Amber, heavily tipped crimson.
- Red Piper. Beautiful deep red of fine form.
- Snowlad. Unquestionably the finest white. 10 cts. each; \$1.00 per dozen; \$8.00 per 100.

The set of 12 varieties for \$1.00.

NEW CENTURY SINGLE DAHLIAS

These magnificent single varieties all originated from the celebrated Twentieth Century offered in this set. They are all of free branching habit, flowering early, profusely and continuously throughout the season, flowers from 4 1/2 to 6 inches across on stems 3 feet long, and when cut keep in good condition for many days.

- *Crimson Century. Rich, deep, velvety crimson, shaded maroon, with rose halo around a yellow disc. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
- *Maroon Century. Rich, velvety maroon with yellow disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.
- *Pink Century. Delicate soft pink, flower very large. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.
- *Scarlet Century. Brilliant scarlet with golden disc. 25 cts. each; \$2.50 per doz.; \$20.00 per 100.
- *Lavender Century. Delicate lilac with light shadings. Very pretty. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
- *Twentieth Century. Early in the season, intense rosy crimson, shading gradually to almost white on the edges and a light halo around the disc. As the season advances the flowers become lighter, changing to almost pure white, suffused with soft pink, not variegated but blended in the most beautiful manner. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.

One each of the 6 varieties for \$1.50.

STANDARD SINGLE DAHLIAS

- *Alba Superba. Fine large white, with a dash of canary yellow at base of petals. 15 cents each; \$1.25 per doz.; \$10.00 per 100.
- *Advancement. Fine deep ruby-red with rose halo and yellow centre
- *Ami Barrillet. Rich pure garnet, with fine dark foliage at the base of each petal.
- *Fashion. Crimson-maroon with darker shadings.
- Gaillardia. Golden-yellow with a broad red band around a golden disc. 15 cts. ea.; \$1.25 per doz; \$10.00 per 100.
- *Gracie. White, delicately suffused with blush and a primrose halo around the disc.
- *Mrs. Bowman. Solferino, a large showy flower.
- Polly Eccles. Pure apricot with yellow shadings, a halo of poppy red surrounding the Indian yellow disc.
- *St. George. A pretty primrose yellow of large size. 15 cts. each; \$1.25 per doz.; \$10.00 per 100.
- Striking. Deep garnet, each petal with a white line on the tip.
- *Wildfire. Brilliant poppy-scarlet, of large size.

Price: Except where noted, 10 cts. each; \$1.00 per dozen; \$8.00 per 100.

One each of the 12 varieties for \$1.25.

We will furnish one each of the 121 varieties for \$1.00.

Listed, an interesting collection, for \$15.00.

Vesuvius. Buttercup yellow, striped and spotted with oriental red	1.25	10.00	
*Victor von Scheffel. An ideal cut flower, of a soft pink, passing to white in the centre; very pleasing	1.25	10.00	
*Volker. A charming free-flowering pure yellow	1.25	10.00	
*Uncle Tom. Maroon with darker shadings, almost black	1.00	8.00	
*Winsome. A fine white of good size and perfect form	1.00	8.00	
Zephyr. Crimson-carmine, intensified by bronzy shadings at the base of the petals; a fine large flower	1.00	8.00	

We will supply one each of the 78 varieties of Cactus Dahlias for \$7.50.

DECORATIVE DAHLIAS

*Admiral Dewey. A rich French purple; very Doz. 1.00	free.	\$1.00	\$8.00
*Black Beauty. Deep velvety maroon, almost black	1.00	8.00	
*Bronze Beauty. Bright coppery orange	1.00	8.00	
*Catherine Dier. Iridescent geranium-red, a favorite at Newport, R. I. where it is used more extensively than any other variety for cutting	1.00	8.00	
*Clifford W. Bruton. A fine bright yellow	1.00	8.00	
*Fire-rain. Cardinal red. A fine cut flower	1.00	8.00	
Gigantea. A large creamy white	1.00	8.00	
*Henry Patrick. A fine pure white	1.00	8.00	
*Lyndhurst. Rich brilliant cardinal-red; a fine cut flower	1.00	8.00	
Marehness of Bute. White tipped with rosy carmine	1.00	8.00	
*Mrs. Roosevelt. Delicate silvery rose	2.00	15.00	
Oban. Rosy lavender, suffused and overlaid silvery fawn	1.00	8.00	
*Souvenir de Gustave Doazon. The most sensational Dahlia of the season, a decorative variety of mammoth proportions, which, under ordinary cultivation, will produce flowers 6 inches across, and can be grown to measure full 9 inches. It is of free growth, remarkably profuse-flowering, and pure scarlet in color	3.50	25.00	
*Sylvia. Soft, pleasing mauve-pink, gradually changing to white in the centre, a fine cut flower	1.00	8.00	
*Wm. Agnew. Rich dazzling carmine red, a grand flower	1.00	8.00	
*Zulu. Deep maroon with black shadings	1.00	8.00	

One each of the 16 varieties for \$1.75.

SHOW AND FANCY DAHLIAS

*A. D. Livoni. Beautiful clear pink, of perfect form and very free	1.00	8.00	
*Arabella. Light sulphur yellow, shaded peach-blossom on edges; a fine flower	1.25	10.00	

AZALEA INDICA, 10-15-20-25 in. across, \$12.00, \$20.00, \$50.00, \$100.00 per 100.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Early Planting of the Larch.

All experienced planters know how impatient the larch is to begin its growth in the Spring. Often before a tree or shrub is dug in a nursery, the buds of the larch give evidence of pushing. Because of this it is one of the first on the list for early digging. When required in lists of stock for late plantings those who have cold storage buildings, as so many nurserymen now have, take care to have a supply of larch trees dug early and placed in the storage house, there to remain until the late order is ready for shipment.

There is more demand for larch of all species than there used to be, because of the call for it for timber. Forests of all kinds are disappearing so rapidly that the reforesting of the land is being talked of on every hand.

In Europe our native larch, americana, and the Japanese one, leptolepis, is wanted, also the Pacific coast sort, occidentalis, while our own foresters are planting the European species, auropea. The rapid growth of the larch, making it of some value in a very short time, is greatly in favor of its use, especially where timber of all kinds is scarce.

Roses for Low Walls.

Fronting many residences are low walls, which can and are often made attractive by being covered with vines or plants. Roses are especially well adapted for the purpose where the wall supports a bank of earth, as it so often does. The plants should be set in the soil, and their growth permitted to run along the top of the wall and droop over its face. The Wichuraiana hybrids are particularly well adapted for this purpose, as the many examples of them met with so used fully testify. They are all close trailing kinds to a great extent, and because of this often hang so close to a wall as to appear almost like a running vine. Of the older known sorts Pink Roamer, Gardenia, Jersey Beauty, Evergreen Gem and South Orange Perfection are often met with; and now Dorothy Perkins is finding its place in the same way. When planted, unless from pots, roses of all sorts should be given a close pruning. All may not require it to make them live, but it ends in bringing about better plants of those that grow; and even those from pots, if in a dormant state, may be well pruned to their advantage. When in leaf such hard pruning would be a serious check to the plants.

Flat Clustered Japanese Snowball.

As the snowball season is approaching, those interested in ornamental shrubs of this nature should not forget Viburnum tomentosum, the one recognized as the parent form of the lovely variety, Viburnum plicatum, Japanese snowball, as all call it. Viburnum tomentosum is really a beautiful ornamental shrub. While a true snowball as the name is understood it has not rounded heads of white flowers, but bears its blossoms in flat heads. The flowers, while mostly sterile, are not all so, which is the reason why we do not get the globe head or "snowball" of those popularly known as snowball viburnums. But because all are not sterile we get in V. tomentosum valuable characters the true snowballs do not possess. The perfect flowers give us berries, and in Summer these become bright red, ornamenting the bushes greatly.

There is another valuable feature in Viburnum tomentosum—the reddish color of its foliage in late Autumn. Viburnum plicatum changes to a reddish brown; V. tomentosum is far more bright; "crimson and rich brown," some of the advertisers of the shrub name it.

While on this subject, there is another, Viburnum rotundifolium, the leaves of which become of a handsome color than either of the others, the last weeks of Autumn, and its "snowballs" are very large.

Aralias for the Lawn.

Those unacquainted with aralias have no idea of the beauty of the specimens when they reach a tree size, as they do in time. As they commence to gain height from a small size the growth is confined to a single straight shoot unless by some accident, or by design, the central bud is destroyed, in which case side branches are formed. But otherwise there is a height made usually of 8 to 10 feet without a single side branch. When about of this height an aralia usually flowers, and as the huge panicles come from the central bud, this, of course, stops its ascending farther in a straight line, and so branches are formed. These branches are never very numerous, and to many this gives the impression of its being a poor shade tree. But when its leaves come out in Spring, being of a compound nature, they spread over a great space—a perfect umbrella, some would say—making a single tree of it a desirable one to place a seat under.

The panicles of flowers are bushy, of a pale white color, the berries that soon follow are of a pink color before they become dark red, and all the time from the commencement of flowering until the falling of the berries late in Autumn, its inflorescence is something to admire.

There are three of these aralias desirable for planting—spinosa, japonica and mandshurica. The latter one is usually called dimorphanthus, and it has the least prickly stems of all. These spines have been thought an objection to the use of the aralias on a lawn. Well, it is not nice to catch hold of one, but hawthorns and many other trees and shrubs have thorns, yet are planted. When the aralias become tall enough to place a seat under them there is no harm done them at all to get a pair of clippers and cut off all the prickles as far up as may be desired. The one named mandshurica has smaller spines than the others and is just as desirable in all respects.

Hardiness of Prunus Caroliniana.

Editor Florists' Exchange:

Noting what Mr. Meehan states in regard to the hardiness of Prunus caroliniana I would say that on this eastern side of the Chesapeake the climate is rather milder than on the western side in the same latitude, and while pomegranates, crepe myrtles and figs will grow here as well as Magnolia grandiflora, most of them will get somewhat nipped

this country, as closely as any man he had never before seen a golden berry holly. I tried to root some from cuttings but did not get them.

Now in regard to pruning hollies, Mr. Meehan is right in saying that they do not need pruning. But there are people who seem to imagine that any tree looks better with a tall trunk, and all over the South we find them trimming up the magnolias; when left to their natural growth they make splendid pyramids from the ground up. Fifteen years ago, when the late Mr. Tutts of Boston was making Pinchurst, the beautiful winter resort in the pine barrens of North Carolina, the first hotel built was to be named Holly Inn. He wanted some hollies about it, too. Acting on my advice he lifted from the open forest two plants that had formed dense heads from the ground, and were about six or seven feet high. Every leaf was carefully clipped off and the trees planted on each side of the front entrance to the hotel. They lived and thrived, and have been let alone. I saw these trees a few weeks ago, they still retain their original form, broadly conical, with the lowest branches on the ground, and are fully 20 feet through and nearly as many tall. Few people fully understand the importance of stripping the leaves from a broad leaved evergreen in transplanting; if this was always done there would be little loss.

W. F. MASSEY.

Salisbury, Md.

Aralia Spinosa.

in Winter, and there will be a Winter occasionally when in St. Mary's County and here figs would be cut to the ground, and pomegranates too, and the magnolias will get badly scorched. In such Winters the Prunus caroliniana would be cut down.

There are trees of this Carolina evergreen cherry in Raleigh, N. C., with stems nearly a foot in diameter, but even there, in the Winter of 1893-4 they not only lost their leaves but had a large part of the tops killed. In ordinary Winters, however, they are not hurt, and bloom in late February. This plant is native to the eastern coast of North Carolina, where it is never hurt in Winter as it is sometimes in the hill country.

Magnolia grandiflora trees here now look rather a pale green after the severe and sudden cold we had a week ago. I think that your St. Mary's correspondent would succeed better with Ilex cassine, the beautiful smooth leaved member of the holly family which is also a native of the North Carolina coast. The clusters of berries are far more beautiful than those of the ordinary holly, and the bush is neat and evergreen. Then another of the same family known as gall berry in North Carolina, Ilex glabra, makes a pretty dwarf evergreen shrub with black berries.

Speaking of hollies reminds me that I found in North Carolina two trees that uniformly make orange yellow berries instead of red. I sent specimens of these to Professor Sargent of the Arnold Arboretum, and he said that after studying the trees of

MISTLETOE POISON THREATENS TREES. Attention is being called to the deleterious effects of the Southern mistletoe on certain trees in Texas. It is said that the pest is particularly prevalent in the Gulf States, and that every municipality in Texas is affected with it. It has been stated by an authority that the life of a tree when thoroughly inoculated with mistletoe poison will terminate in about seven years.

The Texas mistletoe (Phoradendron flavescens) differs materially from its kindred parasite evergreen of Europe (Viscum album) held in veneration by the Druids, which is kept in check in the old world, but cultivated to some extent for Winter decoration. The variety in the cotton States is far more pernicious and must be wholly exterminated or the trees will all perish from its baleful blight. It is a beautiful but horrible parasite, and can only be destroyed finally by cutting off the entire bough on which the growth appears. Cutting out the parasite and leaving the limb affords temporary relief, but it is not the kind of treatment the case demands, for it will certainly reappear on the same bough at some other point.

An appeal has been made by the Audubon Society to Gifford Pinchot, the national forester, and he will as soon as he can, no doubt, send experts into the South to give the people advice about the destruction of the mistletoe.

The hackberry, which is popular in the cities as a shade tree, is one of the favorites of these poisonous parasites, and in nearly every city in the State where hackberry trees have been planted, about 25 per cent. of them have already died from mistletoe poison.

ROSES

Young Stock.

A few weeks after potting weeds will begin to appear, and if not attended to will soon outgrow the plants; therefore, the batch should be gone over and the weeds removed. A bright boy with a piece of hoop iron suitably bent, or a handle of a tea spoon, can go over quite a number in a day. As the plants are cleaned the smaller of the lot should be placed near the edge of the bench and the stronger plants to the rear; in this way the man with the hose can tell what he is doing and there is no danger of overwatering. The soil should not be disturbed too much, though; merely remove the crust. As soon as the plants are nicely started syringing must at once be resorted to or red spider will soon show; let the spray be fine and sharp, but not under too great a pressure, or the cuttings will become loose in the pots. Also let the spray get as near to the pots as possible, without washing out the soil.

Greenfly must also be guarded against, for if it once gains a foothold it is hard to dislodge. Fumigate lightly with tobacco stems two or three times a week if no old plants are in the same house; but as smoke from the stems would injure the flowers, procure some good tobacco dust, keep it in a dry place, and once a week give the plants a good dusting with it. An ordinary sulphur bellows works like a charm, if the powder is kept dry.

Do not hurry the plants along by overwatering; allow them to get fairly dry, then water thoroughly, and if there are a few pots drier than the rest take a pail and a small pot, pick these drier plants out carefully and even up the batch. Give all air possible in favorable weather, and keep a little sulphur on the pipes to keep mildew in check. By following these notes, the plants should make a good strong growth. A great deal depends on how the young plants are treated; for if they receive a check in their early stage they may outgrow it for a while, but remain very susceptible ever after, therefore every little thing should be looked after very closely.

Where stock is not to be planted till late in July or early in August, it is still time to put in a batch of cuttings, and these will make fine stock for late planting. But plants benched after July 10 do not get enough of a start before winter sets in, to produce a lot of flowers when the prices are at their best.

While the young plants must receive much attention, the old stock must not be overlooked. Keep the houses clean, the plants tied, and, above all, disbudbed, and away from the glass, if good blooms are to be expected. Keep the liquid ageing from now on; if the plants are healthy they will take a lot of food; but do not apply it if the benches are too dry. Syringe as often as possible now, and look out for corners and places hard to get at, as these are ideal harbors for red spider. As the days grow longer and more air becomes necessary, watch out for mildew and once a week put a little sulphur on the pipes; mix with it a little lime and it will not wash off so easily. Unless mildew has gained considerable headway, do not dust sulphur on the plants, as on hot days it has a tendency to burn both flowers and foliage. Thrips also may prove troublesome, therefore spray with the mixture as recommended in these notes some time ago.

How all of us would bless a man who invented a greenfly killer! This pest from now on multiplies very rapidly, and if it once gains a footing no amount of smoking will eradicate the pest. So keep it from getting a start.

New Rose "My Maryland"

Plant Notes.

HYDRANGEAS.—Among the plants for Spring delivery for which there are already more than usual inquiries are hydrangeas in tubs. There is seldom any scarcity of small and medium hydrangeas, but with good specimens in tubs it is otherwise.

BOSTON FERNS.—Slowly but surely the old Boston fern is coming again into prominence. Only the other day a jobber asked me to supply him with a large number of this fern in 6 and 8-inch pots, but I didn't have them, and I don't know any one around here who has got them in quantity. That won't be the case long.

ROSE NEWPORT FAIRY is a splendid variety for pillars or such like fixtures. I hardly think it is such a rank grower as some of the other varieties of its class. It is, however, quite distinct in flower from all of them.

DAHLIAS promise to be almost as popular as ever during the coming season at least, and fortunately so, when we think of how many more growers there are now than there were a year or two ago. The chances for the majority of these growers to make the business profitable are no doubt good, but the season of selling is so short that everyone must adopt the most up-to-date methods of propagation in order to make anything worth while out of it. Persons engaged in growing dahlia plants for sale who have no greenhouse have some excuse for contending that propagation by division is the best method to pursue in increasing stock, but that it is not the most satisfactory method from any point of view anyone who has tried both the one and the other knows full well. Propagation by division does not give by any means nearly as many plants as can easily be obtained from the practice of rooting the cuttings taken off tubers gently induced to make growth for cuttings. The number of cuttings possible from a tuber will, of course, depend to a considerable extent on the size of the former, but when they are carefully handled it is comparatively easy to secure twice as many plants in that way as from division. There is also the other consideration of after-success of the plants in their growing and flowering capacity. The best growers have no hesitation in asserting that plants from cuttings are more uniformly satisfactory in these all-important particulars than plants resulting from division of tubers. Then again, as to shipment to distant points, I know positively from actual experience with both methods, as a buyer and shipper, that there is less risk incurred in packing well-rooted plants in 3-inch pots, when the plants have been propagated from cuttings, than there is in the packing of started portions of tubers.

Now is the time to start into growth the tubers of dahlias from which cuttings are desired, and this should be done without undue excitement in order that the growth for cuttings may be in good and fit condition to survive successfully the trying ordeal of the period succeeding their removal from the tubers until furnished with sustaining roots of their own. The tubers should be placed in boxes or on a portion of a bench where plenty of light will reach them, and be nearly covered with leaf mold or any other kind of soil. Every variety should have a label with the name securely attached. When the growth has reached about 3½ inches it should be taken off, with a heel if possible, and placed in the sand, and as soon as the number available for the time being is thus disposed of a good watering is necessary and a light shading for a few days. Dahlia cuttings root more satisfactorily when the temperature of the house is moderately cool, with just a little bottom heat.

Each of the various types of dahlia has its own peculiar features and claims for recognition. The strikingly beautiful cactus dahlias are justly more admired for the decorative character of their flowers individually than any of the others perhaps, and they, as a class, also embrace quite a number now considered indispensable in floral work during the time they are available for such purposes.

The remarkable improvement noticeable in single dahlias in the last year or two makes these formidable rivals in the estimation of florists for general cut flower work of those of the more fantastic cactus type. Single dahlias of the Twentieth Century type are exceedingly well adapted for the decoration of rooms,

THIS IS A REMINDER TO ADVERTISERS THAT OUR

Nineteenth Annual Spring Number

WILL BE DELIVERED TO OUR SUBSCRIBERS THROUGHOUT THE ENTIRE COUNTRY ON

Saturday, March 28, 1908

Announcement of Our 19th Annual Spring Number

The coming of Spring never fails to give added impulse to horticultural and floricultural industries, and, to get your specialties before the buyer at the psychological moment when he is all ready and fully prepared to make his purchases for the season, is the opportunity we are affording you by bringing out this Spring Number on Saturday March 28. **Timeliness is an all important feature in advertising.**

The Business Paper for Business Men

OUR SPRING NUMBERS have earned the reputation of bringing unequalled profitable results to advertisers, as well as of being most interesting and instructive to the readers.

No matter to which particular branch of the business your line of goods appeals, an advertisement in this Spring Trade issue will bring gratifying results. **The opportunity is here; why not grasp it?**

To be in good time, copy for your advertisement must reach us by or before 12 o'clock, noon, of Wednesday, March 25; if received earlier, we can give it still better display.

Publishers **THE FLORISTS' EXCHANGE**

in the filling of large and small vases with the flowers attached to their own long stems.

Some of the cactus dahlias are also suitable and effective for such purposes, but they are more commonly made use of by florists in made-up work, being artificially stemmed when so disposed of. Flowers of one distinct color are the most desirable for decorative purposes and there are of these many to select from.

There is again the decorative type of dahlia, which is well worthy of the consideration of all classes of growers, possessing as it does in many of the varieties belonging to it points of surpassing merit. Dahlias of this type are usually borne on stems superior to those of the cactus type for florists' uses, and the formation of the flowers of many of the varieties is of such a nature as to lend them admirably to decoration. There are two that are especially well adapted for cut flower work; the first and perhaps the best is Katherine Duer, the brilliant red so long popular in Newport, R. I., among the millionaires. The other is Fire Rain, an introduction of Henry A. Dreer, Inc., and offered by that firm

LILY of the VALLEY for EASTER FLOWERING

We have in cold storage in perfect condition for forcing a few cases of High-grade pips. 25pips in a 6 or 7-inch pot or pan finds a ready sale at Easter, and can be flowered in 4 weeks from time of planting. **\$11.00 per 1000; \$25.00 per case of 2500.**

 Write for particulars and catalogue
 JULIUS ROEHRS CO. RUTHERFORD, N. J.

ORCHIDS

We shall receive this Spring large quantities of imported ORCHIDS, namely: *Cattleyas*, *Dendrobiums*, *Oncidiums*, *Laellas*, *Vandas*, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.

Carrillo & Baldwin, Secaucus, N. J.

AMPELOPSIS VEITCHII

10,000 well-rooted, 20 to 30 inch, \$2.50 per 100; \$20.00 per 1000. 1000 one-year seedlings, 12 to 24 inch, \$1.50 per 100; \$12.00 per 1000. In pots of 2000 and over, \$10.00 per 1000; fine for transplanting; packed free of charge. For samples by mail send 25c. in stamps.
 Address, CHARLES BLACK, Hightstown, N. J.

Rooted cuttings of all soft-wooded plants are in demand at this time by florists who do not propagate their own stock. Growers making a specialty of the rooted cutting business will find an advertisement placed in THE FLORISTS' EXCHANGE a very profitable investment.

Newport, R. I. Horticultural Society Meeting.

A meeting of the Horticultural Society was held in Mercury Hall, Tuesday evening, February 25. First Vice-President James Robertson in the chair. The meeting was open to the public and many outside of the society were in attendance in addition to a large representation of members. Robert Cameron of Harvard University Botanic Garden read a very instructive and well-prepared paper on "Annuals and Biennials." The paper was well received and at the close of its reading Mr. Cameron was accorded a hearty vote of thanks. Remarks by members and others followed. Refreshments were provided by the executive committee.

John Marshall had on the table a number of seedling carnations; the chair appointed Messrs. Bruce Butterton, Stewart Ritchie and James J. Sullivan a committee to judge them and report. After considerable delay the committee made a report recommending a silver medal for a red seedling carnation and a certificate of merit for a white one. The recommendations of the committee were made effective by vote of the society. The red carnation of Mr. Marshall's, for which he was awarded the silver medal, is by far the best ever raised by him, and is in the opinion of the committee and of many others the finest red seen here. It is of a good bright shade of color, with large, well formed blooms, held very erect by long, stiff stems. Mr. Marshall has named it Newport.

News and Trade Notes.

John Beaton of the R. & J. Farquhar Company of Boston visited Newport last week.

E. L. Zeigler is already making preparations for the opening of his Bellevue avenue store for Easter. Many lilies seen in Newport lately are anything but in promising condition as far as quality of plants or flowers is concerned. Of course there are exceptions; but on the whole, by what I have seen, lilies here will be a poor crop.

There is probably a larger number of gardenias grown in Newport for Summer bloom than anywhere else in the country; nearly all bench planting is completed for the season.

There is a noticeable sentiment in favor of the old Boston fern in large specimens for house decoration.

A rather long and hard Winter is at last showing signs of passing away and with its passing more pleasant signs of activity are here and there noticed. There are one or two large places on which grading had been well started last Fall and the work carried on when weather permitted through the Winter; now that the frost is about all out of the ground the planting of trees and shrubs will be vigorously pushed along to a finish. The contractor in charge of regrading and planting the Pembroke Jones estate was around this week making arrangements for moving large trees onto the place. Large numbers of trees, shrubs and other plants will be used.

Pine coniferous material is used so extensively here that after every Winter it takes a great many plants to fill the gaps made in a few months. Some of this material is available in local nurseries, but usually a great many plants are purchased elsewhere. D. M.

Success with House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.
The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

To Retail Florists. The old thought, that it was dangerous for a customer to be superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will be or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

Commercial Violet Culture \$1.50

The Florists' Exchange, 2 to 8 Duane St., N. Y.

THE WEEK'S WORK

Timme's Timely Teachings. Gardenias.

The propagation of gardenias is only successful where a somewhat high degree of heat combined with a rather close and congenially moist atmosphere can be steadily maintained without difficulty for weeks. During the months of Mid-winter a rightly placed and carefully attended indoor propagating case comes nearest to giving full satisfaction. February struck cuttings should now be ready for pots. Good soil for these is one-half leaf mold, one-fourth ordinary good garden loam and the remainder sharp sand. The potted plants now call for the same conditions and the same amount of watchful attention, until established as the cuttings did until rooted. At this season the grower who has or soon will have a hothed may make use of this as indeed the best place for newly potted gardenias, requiring to be held closely in a temperature not much lower than 75 degrees day and night. Where no hothed is available the indoor case must do. These plants, with another shift into larger pots and somewhat richer and more compact soil at about the beginning of May, will grow into the right kind of gardenias for the stocking of benches in June or July, or to be grown on under continuous pot culture. For this latter purpose it is still time to root cuttings; the ripened newer growth on old plants, shoots about two inches in length, put in very sandy leaf mold in small pots, will root in a hothed in a couple of weeks. In their care the proper amount of steady heat and moisture, shading and avoidance of cold drafts of air are essentials brooking no neglect. Any healthy old plants from a bench of gardenias to be used for other purposes, could now be potted up and be made to produce flowers next season.

Lemon Verbenas.

Old plants of lemon verbenas, rested for a couple of months and started afresh some four or five weeks ago, are now studded with new shoots. Such old plants hold forth an abundance of material for propagation, but otherwise are of no particular value for the retailer in plants, while the call for small and medium-sized plants of this old favorite has doubled in recent years. The newly made growth roots readily and quite a batch of good stock in this line may be worked up by the time sales begin, for in this case it is not show of bloom, but verdant growth, extremely redolent, which attracts buyers, be the plants ever so small. Early struck cuttings, which grow easily into the best of 4-inch market plants, should not for the want of time remain in the propagating bench too long; nor should they, after being potted up, be allowed to become root-bound before being again repotted into the fours, if thrifty growth and crisp appearance are to distinguish the salable plants from those so often seen in the Spring.

Holland Bulbs.

Advantage of any fairly good spells of weather had better now be taken for the bringing in of what yet may remain out of doors in hardy bulbs, potted or boxed. All kinds of narcissi, tulips, hyacinths and other less important varieties of Dutch bulbs that are to be forced before, at or after Easter, will after this date fare much better in any other cool, frost-proof place than under a covering in the open. Any and all of them, if so desired, can now without difficulty be subjected to pretty severe forcing, this to be followed by a few days of hardening off in a much lower temperature, not necessarily in a well-lighted house, if the flowers are to be cut. Tulips finish up best in some semi-dark place, where plenty of fresh air can reach them; hyacinths after being forced in great heat and under a heavy shading, need more light to bring out fully their colors when finally removed to a cool house before being cut for market, while daffodils and other varieties of narcissi need no strong heat at any time to become good stock for cutting. For these as well as potted hyacinths, tulips and the smaller Holland bulbs, to be sold as flowering plants in pans and pots, a light, airy and rather cool house will prove the best place. Any of the bulbs under heat need great quantities of water.

When Writing Please Mention THE FLORISTS' EXCHANGE.

Lilacs.

As most desirable cut material during the months of Winter lilacs are coming more and more to the front in our markets. Preparing lilacs for very early forcing includes etherization, a process now systematically employed by those who have made the forcing of lilacs on a large scale one of their principal specialties. Other means to the same end are not wanting. Plants afforded an opportunity in early Spring to start and complete their season's growth under glass in some well-lighted and ventilated cool greenhouse, will do this long before any not so favored. Then placed out of doors they will ripen up their wood early, with sufficient time to sprout for a thorough rest before being forced. Firmly established roots, thoroughly matured wood well set with buds, qualify lilacs for forcing in heat from 60 to even as high as 75 degrees if need be. If flowers refuse to open or to be perfect when open; in short, if failure proves the outcome, the cause in nearly every such instance is inattention to ventilating; i. e., lack of fresh air from the time the buds are seen until they are fully expanded. Lack of moisture in the air while lilacs are being forced is another very common cause of buds coming imperfect or remaining stuck after being formed. Less trouble of this kind is experienced in the latter half of Winter. Flowering lilacs offered as nice, bushy potted plants could be sold in early Spring in far greater numbers than growers seem inclined to put forth. Great heat in their culture is not required, but lots of room for every plant, much direct light and air.

Hotbeds and Frames.

The middle of March is about as early as florists care to make use of hotbeds, while cold frames come handy all the year through. That frames and sashes always in use cannot last long is quite natural. The constant wear and tear and exposure to all sorts of weather soon destroy the wood, and if the glass is to hold out longer, sashes must be kept in repair. When these once begin to show the infirmities of impending collapse, the corner joints losing their grip, and a bit of carelessness in oft repeated handling is added, there will then be no end to the breaking of glass. Such shabby old sashes, if seen to in time, may be made to do for another season, but if too far gone all further repairing and painting are but a waste of time and labor, which had better be expended in replacing with a new sash and using the old glass in glazing it. This is all work that could now be done, so as to have things ship-shape when wanted. Fresh horse manure forked over once or twice should now also be on the place and in readiness for the making of hotbeds. It is important to tramp down solidly layer after layer in building it up until the desired height is reached, when frame and sashes are placed on top. Very strawy manure, or tree leaves, intermixed in its preparation will generate a heat less intense but longer lasting. The soil to be used for the starting of seeds, a layer of about three or four inches, should not be put in before the rankness of heat has subsided and the bed has cooled down to the point desired.

Bougainvilleas.

Slowly being brought into bloom rather than actually forced in high heat is what suits bougainvilleas, as it does many other kinds of plants believed to need hard pushing. The potted plants of Bougainvillea glabra, started the first week in February in a cool house, then brought into 45 degrees of steady warmth, will now be benefited by another rise in temperature of about 10 or at the most 15 degrees, this to be the extreme point, only necessary for the formation of perfect buds the only serious obstacle in the culture of bougainvilleas growers have at times to contend with. Copious sprinkling with tempered water will help to overcome it. But after this is accomplished, it is better for any of the plants ready to expand their bracts to be again removed to a cooler house where they will finish up in finer form than in great heat. For the propagation of bougainvilleas, it is now the proper time, while new growth furnishes cuttings and bottom heat is still to be had.

Phlox Drummondii.

Why people who prefer to grow their own plants from seeds instead of patronizing their local florist have hardly ever any success with Phlox Drummondii, the seeds usually never coming up, is hard

STOCK YOU NEED NOW.

GERANIUMS

A. H. Trigo, John Doyle, S. A. Nutt, Bertha de Pressly, Mad. Boney, \$2.50 per 100.

Our choice of varieties in pink, red and white, \$2.00 per 100.

BEGONIAS

Marjorie Day, Thurston, Metallica, Rubra and Argentea Guttata, \$1.00 per 100.

Tuberous-Rooted—Single: In named colors, white, pink, scarlet, crimson and yellow, \$3.00 per 100; Mixed, \$2.50 per 100.

Tuberous-Rooted—Double: In named colors, white, pink, scarlet, crimson and yellow, \$5.00 per 100; Mixed, \$1.00 per 100.

CANNAS. We have a large list of standard varieties including: Chas. Henderson, Crimson Bieder, Beautie Potestino, Florence Vaughan, Queen Charlotte, Souv. de Antoine Crozy, etc., strong 2-eye divisions, \$3.00 per 100; \$25.00 per 1000.

THE STORRS & HARRISON CO., Painesville, Ohio

DAHLIAS (field-grown roots) Wm. ... Mrs. Wellesley, Admiral Dewey, A. D. Llyond and Fern-Leaf Beauty, \$5.00 per 100; Grand Duke Alexis and Kismetville, \$7.00 per 100.

MARGUERITE, Queen Alexandra, \$3.00 per 100; Coronation, \$3.00 per 100.

ROSEON FERNS. Plants well established in 2 1/2-inch pots, \$1.00 per 100; \$30.00 per 1000.

SMALL FERNS for dishes, \$2.50 per 100 ASPARAGUS PLUMOSUS NANUS, 2 1/2-inch pots \$3.00 per 100, \$25.00 per 1000

BOUGAINVILLEA GLABRA SANDERLAXA, 2 1/2 inch, \$1.00 per 100; 4 inch, ready to bloom, \$20.00 per 100.

BOXWOOD, Pyramids, 36 inches high, \$1.75 each.

BOXWOOD, Bush form, very heavy, 30 to 36 inches high, \$2.00 each.

RHOODODENDRONS. Short, well-formed plants for pots, full of buds, 1 1/2 inch size, \$5.00 per dozen; 2 1/2 inch size, \$12.00 per dozen.

AZALEA MOLLISS. Bushy plants, full of buds and easy to force, 12 to 15 inches high, \$25.00 per 100; 15 to 18 inches high, \$35.00 per 100.

KENTIA PALMS in all sizes.

LANTANA IRRONONICA 7-inch pot plants, 5 to 6 leaves, 18 to 20 inches high, 75c. each; 8 inch pot plants, 6 to 7 leaves, 20 to 22 inches high, \$1.25 each.

Grand Rapids, Mich.

Trade Notes.

The weather until February 1st was very mild and it looked as though we were to have an open Winter, but February 1st severity, has more than made up for all previous mildness, being punctuated with heavy snow-storms, leaving the railroad service, stalling train, etc.

Henry Smith and Chas. Chadwick had considerable damage done by the weight of snow loading in the rafters of several of their houses.

St. Valentine's Day was the only real old-time busy day since Christmas, otherwise business has been fair. Aside from an occasional shortage of roses, the supply has been in excess of the demand. Red roses are so scarce that they are not to be mentioned.

Bulbous stock is a glut. Being scarce last season and realizing a good price, some florists dipped in heavily, one planting 300,000 of all kinds, while others materially increased their plantings, and now the waste is great. It will be a streak of luck if the first cost of the stock is realized. Less of it will be grown next year.

Funeral work has been the mainstay of the trade, and it has been plentiful. The aggregate of business, all things considered, is very satisfactory and we believe, will compare favorably with that of any other industry.

Lilies, as usual, are somewhat diseased and poor varieties are mixed in; roughly estimated, the loss by all lily growers in this vicinity will run from 10 to 50 per cent. of the total. In giantum the loss is trifling.

In spite of the heavy supply, retail prices have been pretty generally maintained and very little dangerous cutting done. Roses realize \$1 to \$1.50 per dozen; carnations, 50c. to 75c.; double violets, 25c. per bunch of 25. Single, 35c. per bunch; HARRISII and callas, \$2.50 per dozen; all bulbous stock, 50c. per dozen. G. F. C.

Kalamazoo, Mich.

News and Trade Notes.

Very little difference is noted in the amount of business transacted, and now with the approach of Lent much improvement cannot be expected. Special efforts seem to be necessary to clear off the surplus, as carnations are advertised at 25c. per dozen quite frequently in the local papers.

According to official observations taken here there has been recorded a snowfall totaling six and a half feet, most of which fell between Christmas and the last week in February. It will easily be seen, therefore, that the amount of sunshine has been exceedingly limited, and the accumulations of snow on the roofs and gutters would still further darken the houses and render the growing of good stock difficult. But in practice this theory did not work out and, strange to say, I cannot call to mind when the growers in this section were cutting better carnations with fewer splits than at present. Roses also have been of good quality, while the cut of violets has been the heaviest in years and the size and color remarkable. Judging from the experience of the present Winter the importance of sunshine and light seem to be normal when due care is exercised in other details.

H. Fisher spent a few days in Chicago stocking up for his stores here and in Battle Creek and reports business as satisfactory in both places.

A Groffert intends adding another house next Summer, which he will use chiefly for propagating, etc. He finds Vesper as a white carnation the best in sight, and as he grows it it certainly looks a marvel in quality and production. S. B.

A COMPARISON OF COSTS

Is the cost of a one inch advertisement in every issue of The Florists' Exchange for one year, 52 issues. Total circulation, 369,200.

Is the cost of a three inch advertisement in every issue of The Florists' Exchange for one year, 52 issues. Total circulation, 369,200.

Is the cost of a six inch advertisement in every issue of The Florists' Exchange for one year, 52 issues. Total circulation, 369,200.

Is the cost of the one cent stamp required to mail 369,200 circulars, exclusive of the great additional cost of paper, printing, addressing, etc.

The advertisements in The Florists' Exchange are ALWAYS read. The circular generally goes into the waste basket, without being read.

Alpine and Rock Plants

Gentians, Acanthis, and Verna, Edelweiss and ten other plants, \$2.00, including post age. Six hundred varieties. Send for catalogue. Cash with order.

ENGLISH HOME OF ALPINE PLANTS South Pool, Kingsbridge, Devon, England

to tell. But their plight is the florists' opportunity; it has made this easily grown annual one of the good selling items in bedding stock. Seeds should now be sown and the soil kept continually moist, with good drainage provided for in the boxes as a matter of course. This probably is the point where the lay gardener is at fault. The seedlings, when above ground, grow rapidly; a cool stand, light and air help them to become sturdy stock that will soon begin to bloom after being put into 2-inch pots, out of which they are sold at fifty cents per dozen, which leaves a wider margin of profit than fifteen or twenty cents for those dug out of trays, considering that the transplanting into pots does not take any longer than into boxes, though the potted stock may take up more room. F. W. TIMME.

NEW VIOLET BOSTON

Entirely distinct, a strong grower, a free bloomer, and the finest single violet in cultivation. Ready for distribution in April and May.

Society of American Florists and Ornamental Horticulturists.

Meeting of Board of Directors.

A meeting of the executive board of the S. A. F. O. H., is called by order of President Traendly, to be held at the Prospect House, Niagara Falls, New York, at 9 o'clock a. m. on March 23 next. The same is to continue on March 24 in case the business affairs of the association are not concluded previously.

W. N. RUDD, Secretary.

PAMPHLETS RECEIVED.

RHODOENDRONS, KALMIAS AND AZALEAS is the title of a neatly printed and informative booklet prepared by P. A. Koene, vice-president of the Morris Nursery Company, 1 Madison Avenue, New York, in which the compiler gives some interesting historical facts concerning these plants, with instructive information relative to their culture and uses for planting purposes. The best varieties are enumerated and described. A price list is added. The booklet is illustrated with handsome half-tone pictures.

The National Rose Society of England has a total membership of 2,484.

The S. A. F. and Plant Nomenclature.

The recent opinion of Professor C. S. Sargent regarding the botanical designation of the sterile form of *Hydrangea arborescens*, which was originally named by one of the introducers *H. arborescens alba grandiflora*, the word "alba" having now been dropped to conform to the recognized rules of botanical nomenclature, has induced us to look into the attitude of the S. A. F., relative to plant nomenclature in general and botanical nomenclature in particular.

In the 1891 proceedings of the society, to which we alluded in our February 22 issue and to which we now refer those interested, is given the exhaustive and informative report of the then nomenclature committee, presented by William Falconer, and adopted by the organization. In that valuable document it is stated (page 86), under the heading "Getting at the Proper Botanical Name":

"We do not presume to interfere in any way with the botanical nomenclature of plants; that is the mission of the scientific systematic botanist."

Again, on page 91:

"In the case of new species of plants, the first published botanical name takes precedence, but this publication must be *technical* (the italics are ours) and made in a recognized botanical or horticultural periodical or work, and not in a trade catalogue."

Further, page 92:

"Where species are concerned, it seldom happens that a new species is first brought to the light of the world in a florist's catalogue; it almost always has had published botanical recognition before then, and the careful florist or dealer in new plants, if he exercises due diligence can generally acquaint himself with the published description of the species in question and satisfy himself of its identity; and right here comes in the utility of an early horticultural-botanical training for the florist, a good set of standard modern garden and systematic botanical works and periodicals for reference, and a herbarium of garden plants."

We regard the present form of *Hydrangea arborescens* var. *cordata* as coming under each and all of the foregoing extracts from the committee's report, from the fact that it has required the aid of the "scientific systematic botanist" to determine correctly the identity of the plant in question. That being so, we submit that the S. A. F. has no right to register the name of a botanical species, until that name has been bestowed and the plant technically described by the scientific botanist. The society has gone on record as stating that it "does not presume to interfere in any way with the botanical nomenclature of plants."

Again we submit that the published botanical name, given by the introducer of the plant under discussion was not "technical"; this is demonstrated by the appellation now applied by Professor Sargent; it is also evidenced by the previous name given the plant by Mr. Rehder.

Furthermore, Professor Sargent, to whom the matter was referred for decision, has not himself stated that the plant he describes for Mr. Hill is a "new form"; and Mr. Rehder, in an interesting communication, appearing elsewhere in this issue, gives as the reason for his appending the term "forma nova," to his appellation, that "though the form has been known several years, I may say that, according to botanical usages, it only means that the form had been properly described and proposed as a *new form* (the italics are ours) for the first time at the place quoted above." It will thus be seen that "forma nova," is not so much of a "clincher" after all; as our good friends (in this instance), the other botanists, have yet to be heard from on Mr. Rehder's proposition.

At all events the appellation first arrived at (*Hydrangea arborescens alba grandiflora*), not being correctly technical, does not afford the introducer registering the name he gave the plant the "right to pre-empt" the designation given, for according to Professor Sargent himself the correct botanical name is *Hydrangea arborescens* var. *cordata* var. *sterilis*.

As Mr. Hill states in a letter to a contemporary it is more than likely a common name, such as the "snowball hydrangea," will be applied to the plant, which, in the circumstances, would be better for all concerned.

Meantime the right of the S. A. F. to interfere with botanical nomenclature is questioned. The defects that have disclosed themselves in the present "presumed" interference, go a long way to convince us of the good judgment of the society's 1891 nomenclature committee in the premises; and the "forma nova" pipe requires a few more soothing ingredients before it can be peacefully smoked by the vexed individuals and the gentleman who, probably with the best of intentions, but apparently unaware of the attitude of the S. A. F. toward botanical nomenclature, and of the recognized rules necessary to establish such nomenclature, has been the cause of their vexation.

Mr. Rehder's letter shows how simple it was for the "ordinary" horticulturist, not in the "angelic" class to conclude that the *hydrangea* under discussion was identical with *H. arborescens sterilis*. He says: "In fact, no one who knew the original description, but had not seen the herbarium specimen of *sterilis*, could have come to any other conclusion." It would be interesting to know if either Mr. Hill or the ex-registrar of the S. A. F. O. H. had ever seen "the herbarium specimen," previous to bestowing and registering the faulty appellation "*Hydrangea arborescens alba grandiflora*." The attempt to name and describe the plant registered would tend to prove that they had not; that the whole effort was purely haphazard in the case of the party registering, severely indifferent and negligent on the part of the S. A. F.'s official; and on that account not to be commended.

If the botanist of the society has any mission to perform, it is surely to render assistance along this particular line, and to him the matter should in the very beginning have been referred for his opinion.

Our own attitude in this affair may be looked upon by some as being hypercritical; but we cannot too strongly emphasize the correct identification of feral plants of this character, or for that matter of all other plants, as well, before registration and dissemination. In the present instance, the same plant is offered and sold as "*Hydrangea* American Everblooming (*H. arborescens sterilis*)," and as "*Hydrangea arborescens grandiflora alba*." Such a condition can only breed confusion and tend to financial loss, as there is a possibility of the plant being bought under each name, the buyer believing he is securing separate and distinct things. This danger could be avoided by introducers not practicing haphazard botanical nomenclature, but securing correct technical identification before naming and distribution; and, we argue, it is the province of the S. A. F. O. H. to help ensure this and protect its members and the trade. Florists and gardeners may well be left to handle the names they give to such subjects as roses and carnations; but when they attempt to deal with botanical nomenclature, it is a different thing, and they may be rushing into something where the more conservative and less impetuous wisely "fear to tread." We believe all fair-minded and unprejudiced persons will realize the force of our contention, which is advanced for the good of all concerned; nothing more and nothing less.

For Easter Trade.

The sale of flowers and plants at Easter has become a national feature, and few there be so poor whose homes are not graced by these harbingers of Spring and glad tidings. In the effort to assist the dealer in interesting his public, the A. T. De La Mare Ptg. and Pub. Company, publishers of *The Florists' Exchange*, have issued six dainty folders covering designs in made-up baskets, plants and flowers, samples of which they offer to mail free to applicants. Their advertisement of these novelties appears in this issue.

HORTICULTURAL ENGLAND VS. HORTICULTURAL AMERICA.—American carnationists have been having high old times of late, says a writer in *Horticultural Advertiser*, Eng., and considering that America, as a nation, is many years behind this country in things horticultural, it is amazing how enthusiastically American florists rally to the annual conventions promoted by the Society of American Florists, American Rose Society, and American Carnation Society.

As far as I am aware, there is nothing run in this country on similar lines.

The various horticultural societies hold their annual meetings, shows, and dinners, but the American trade societies seem to run the whole lot combined, spreading the proceedings over several days. Frantic enthusiasm seems to pervade the meetings, the various speeches and papers given are listened to with every attention, while the shows attract everybody who likes to see florist's art in its highest form.

The various trade journals, like our own, devote themselves to the cause, only at much greater length. Every florist and grower for market can read practically word for word what has been said at the convention, while photographic illustrations enable those not present to become acquainted with every important item exhibited, together with the various gentlemen who control the destinies of the different societies.

From an outsider's point of view, it would appear that there is a deal of difference between horticultural England and horticultural America. At home, the amateur rules the roost; in America the tradesman holds things in the palm of his hand.

A daily paper of Bay City, Mich., publishes the names of three Michigan seed firms charged by the Department of Agriculture with having sold misbranded or adulterated seeds during the calendar year 1907. The harmful effects of this publication can be more fully imagined than described.

OUR READERS' VIEWS

Hydrangea Arborescens "Grandiflora."

Editor Florists' Exchange:

I comply with pleasure with your request and send you herewith a verbal translation of my description of *Hydrangea arborescens grandiflora* published in the Mitteilungen der Deutschen Dendrologischen Gesellschaft for 1907, p. 71:

"*Hydrangea arborescens* Linné f. *grandiflora*, forma nova. H. arborescens alba grandiflora E. G. Hill, Horticulture (Boston) IV, 53. Fig. (1907). All flowers sterile, white to light greenish white, 2-2.5 cm. (4-5 to 1 in.) in diameter, forming a large corymb, 12-15 cm. (5-8 in.) broad sepals ovate, acute, leaves ovate to ovate-elliptic, cordate at the base or the lower ones rounded.

"This form is distinguished from the *H. arborescens sterilis* Torrey and Gray (Pl. N. Am. 1851, 1840), which likewise has corymbs consisting only of enlarged sterile flowers, by the larger flowers with ovate acute sepals and by the cordate leaves; it apparently is a form of the variety *cordifolia* Torrey and Gray. *Hydrangea arborescens sterilis*, on the contrary, has smaller flowers, only about 1 cm. (3-4 in.) in diameter or somewhat broader, with oval sepals rounded at both ends and furnished at the apex with a short point, and has the leaves abruptly narrowed or rounded at the base; it is therefore apparently a form of the variety *oblonga* of Torrey and Gray. The form *sterilis* had been collected more than 60 years ago by John Carey near Wysox, Pa., and I have seen the original specimen at the Gray herbarium. In the same herbarium there is also a specimen of *H. arborescens grandiflora* from Nashville, Tenn., but the plant now in cultivation is said to come from Ohio. Whether the plant cultivated formerly under the name 'Hills of Snow' belongs to the form *sterilis* or *grandiflora* I am not able to say."

Regarding the question why "forma nova" had been appended to the new name, though the form has been known several years, I may say that according to botanical usage it only means that the form had been properly described and proposed as a new form for the first time at the place quoted above.

I also may add here that my description was drawn up from plants which flowered at the Arnold Arboretum last Summer, while the form *sterilis* is known to me only from an herbarium specimen. The two forms are very similar anyway, and as the size of the flowers may depend very much on the cultivation and the season and may not be a reliable distinctive character, the only good difference between the two is in the shape of the sepals and of the leaves. These characters are not mentioned in the original description of *sterilis*, and it is therefore not strange that the form now in cultivation had been considered by several horticulturists, and also at first by myself, as identical with *H. arborescens sterilis*; in fact, no one who knew the original description, but had not seen the herbarium specimen of *sterilis*, could have come to any other conclusion.

Arnold Arboretum.

ALFRED REHDER.

[In an accompanying note Mr. Rehder adds: "It would be interesting to know whether the plants offered now by several firms have one common origin, and whether *H. arborescens sterilis* from Wysox, Pa., has ever been in cultivation." It would go a long way toward answering the first inquiry if the several introducers of the *hydrangea* now designated "*arborescens grandiflora*" would furnish for publication, the source whence they originally secured their respective supplies. Ed. F. E.]

Editor Florists' Exchange:

Will you kindly allow me a few words in regard to the *Hydrangea arborescens grandiflora*? Not with a desire to participate in the discussion as to the name, because, in the first place, the writer is not sufficiently well versed in such matters, and also because to any reasonable man there appears to be nothing left to discuss.

E. Y. Teas on page 277 of *The Florists' Exchange* mentions my name in a desperate effort to discredit the E. G. Hill Company, and it seems no more than just to explain clearly Mr. Teas' connection with this affair.

It is true that the writer stated to Mr. Teas that the *hydrangea* appeared to belong to the same family as the wild *arborescens* growing in the ravines of our City Park. It is also true, I am sorry to say, that the writer was with Mr. Teas on the E. G. Hill Company's place when he first saw the *hydrangea* in bloom; Mr. Teas stated at that time that he had never seen it before and marveled at its beauty and vigor.

Shortly after this time the writer learned that Mr. Teas had come into possession of several large plants, E. G. Hill, realizing the value of this shrub, greatly desired to withhold general dissemination until sufficient stock could be worked up to insure its becoming a money-making proposition—a perfectly justifiable desire. With this end in view the writer visited E. Y. Teas at his nursery, and entered into an agreement with him to withhold dissemination for one year. In return for Mr. Teas' promise to hold the stock, the writer on behalf of the E. G. Hill Company agreed to prostrate his (Teas') stock for him since he had not the equipment to do it

himself. This was done by the E. G. Hill Company and the cuttings, strongly rooted and without charge, returned to Mr. Teas. These very cuttings, together with some large plants, were sold to the firms mentioned by Mr. Teas in his latest communication and from these the said firms were trying to work up stock. The firms mentioned had an undeniable right to buy what was offered and to work up all the stock possible, but it is difficult, under the circumstances, to justify the sale by Mr. Teas, and this should not interfere with Mr. Hill's right to register a name. To the writer's absolute knowledge the stock was sold to at least one of these firms as "E. G. Hill's *hydrangea*," and was so labeled on their place until named by Mr. Hill.

As to the name and registration, the highest authorities in three countries have passed judgment, and even E. Y. Teas, with all his professed knowledge on the subject (all of which has been obtained since he first saw the plant in the E. G. Hill Company's grounds) cannot go behind such judgment.

Richmond, Ind.

FRED. H. LEMON.

A Better Dahlia Classification Needed.

Editor Florists' Exchange:

I read with interest and profit in your esteemed paper articles on the peony and other flowers. The dahlia is the flower to which I am devoting my special attention; and although I am a small grower, yet "the interest of one is the concern of all." So when I received this Spring's catalogues I was impressed with the need of a better method of describing the various types of dahlias, especially in regard to the erroneously called cactus section. That this need is apparent is shown by the efforts in some of the leading catalogues to better enable customers to make selections of types. One leading catalogue divides the cactus types into Style A and Style B, illustrating these types with proper cuts. Another catalogue gives a certain type as cactus hybrids. Certain varieties are listed as cactus in one catalogue and the same varieties in another as decorative. Take the white dahlia, *Flora*; a leading catalogue places it in the decorative section, another in the cactus as a flat-petaled variety, still others as simply a cactus.

Other instances might be cited to show the necessity of better and more uniform methods of description to insure the permanence and future popularity of this noble flower. That there is need of something being done along these lines in the near future must be admitted.

I will not at this time suggest a remedy, but will leave that for the big fellows. I would only suggest that the long lists of innumerable varieties now being brought forward to meet the demand for something new be shortened. When a variety like *Kreimhilde* becomes popular, a large number of new named seedlings are introduced, imitating the popular one, most of which are inferior. It seems that with American ideas, better methods of description could be given to give more correct conceptions of the leading types, although there will always be more or less overlapping from one type to another, and not depend so much on the descriptions given by the name of the European growers.

Branford, Conn.

NATHAN A. MILLER.

[We understand that the New England Dahlia Society has a committee at work on the matter to which our correspondent refers. The gentlemen composing that committee are proceeding carefully and deliberately, and no doubt they will evolve a classification that will be acceptable to all concerned.—Ed. F. E.]

Botanical Names Should be Given.

Editor Florists' Exchange:

In your report of the remarks of John Dunbar before the Massachusetts Horticultural Society mention is made of some of the best and hardiest conifers for the North and Northeastern States. In the list of pines only common names are given, and I suggest that the botanical names would add to the usefulness of the list. I have some acquaintance with pines, yet confess to an ignorance of what the following ones are; Macedonian, Japanese white, lace bark, the yellow, and Japanese red; and no doubt others besides myself would prefer the botanical names of these and all of the list given.

Another thing I notice, is the placing in the possessive case of many of the names. For instance, Lambert's, Jeffrey's red, and Thunberg's. Why are these pines theirs? *Pinus Jeffreyi*, from the termination of the name, no doubt was found by Jeffrey, and so would rightly be Jeffrey's pine, but the termination of *Lambertiana* and *Thunbergii* does not indicate any particular connection of these gentlemen with the pines named after them, and I am puzzled to know how the pines are theirs. Will some one please explain? PUZZLED ONE.

[In justice to Mr. Dunbar it should be stated that in his original paper he gives the botanical name of each of the subjects he mentions. Our report was the popular one supplied by the society to the newspapers, for which the essayist is in no way responsible. However, the point our correspondent makes is a good one, and we respectfully submit it for the consideration of the publicity department of the Massachusetts Horticultural Society. Ed. F. E.]

The Brazilian Melon Fruit.

Editor Florists' Exchange:

In reply to the query of P. B. of New York, concerning his Brazilian Melon Fruit, I have to say that I presume he is growing *Solanum nigrum*, which is known here as *S. guatemalense*, also by the name *pepino*. This subject was introduced to this part of the country several years ago by an enthusiastic horticulturist, and planted at an elevation of 1100 feet, twenty miles from the ocean, in a sheltered southern exposure. It grew feebly and produced a few fruits of such poor quality that it did not justify the grower in taking any pains to continue its cultivation. A plant was obtained by the writer three years ago and planted at a much lower elevation against a tight board fence, in full sunlight. It bloomed freely but set no fruit, and it was practically impossible to keep the red spider off the plant, so it was dug up and consigned to the brush heap.

Belonging, as it does to the tomato family, the fruit may not set for P. B. for the same reason that tomato blossoms fail to set at times. I am led to these remarks by the wonderful description of this fruit which appears in *The Florists' Exchange* for January 25, 1908.

The amazing statements made in some catalogues in regard to novelties, or old and discarded plants under new names, seem to have a fascination to the plant enthusiast, whether old or young, that is irresistible. It would be interesting to know how many hard earned dollars are parted with annually by conching growers for just such worthless subjects as "Brazilian Melon Fruit," in the north temperate zone.

P. D. BARNHART.

Obituary

Alexander Forsyth.

After a short illness, Alexander Forsyth, a pioneer horticulturist of Denver, Col., died at his home, 1892 Humboldt street, February 19. Mr. Forsyth had lived in Denver since the early seventies, and was at one time superintendent of Riverside Cemetery. Once he was president of the Caledonian Club. He was a Mason of good standing. Mrs. Forsyth and one daughter, Miss Jennie Forsyth, survive. Mr. Forsyth was 58 years old and had served fifteen years for the Riverside Cemetery Association.

Frank Cummings.

Frank Cummings, Sr., of the firm of Frank Cummings Bulb & Plant Company, died at his home in Meridian, Miss., on the morning of February 23, aged 83 years. Death was caused by la grippe developing into pneumonia; he passed away after an illness of only ten days.

Mr. Cummings was born near Montreal, Canada, of French parents. He emigrated to St. Albans, Vt., when about 16 years of age; from there he went to Albany, N. Y., where he resided for 11 years. About seven years ago he went to Meridian, Miss., to engage with his son, Wm. W. Cummings, in the growing of cannas and other stock, the business being conducted under the firm name of Frank Cummings, Sr. In 1905 the firm name was changed to Frank Cummings Bulb & Plant Company, taking into the firm his two grandsons, F. B. Cummings and W. G. Cummings. There will be no change in the title or in the policy of the firm.

F. C. Miller.

As briefly announced in last week's issue F. C. Miller, Bracondale, Ont., died on Monday, February 23, 1908. He was 63 years of age, and had been a resident of Bracondale for forty years.

Frederick Christopher Miller was born at Portsmouth, England, and after being educated at St. Mark's School, London, and St. David's College, in Wales, emigrated to Canada, and for some time taught school in Seaton village, which he gave up to found the business by which he became so well known. He was a member of the York Township Council, and in politics was a conservative. He was also a member of the York, Doric and Stanley Masonic Lodges, a Companion of the St. Patrick Chapter of Royal Arch Masons, a member of the Sons of England and of the Albany Club, and an honorary member of the I. O. F.

He leaves a widow, Mrs. Ellen Mary Miller, whom he married in 1865 before leaving Portsmouth; three sons, Fred H., Edward T. and Bernard W., all of Bracondale, and four daughters.

Mr. Miller was a genial, companionable man, and greatly esteemed by all who knew him. He was a fluent speaker, and was often called upon on festive occasions, particularly at the banquets of the American Carnation Society (of which he was a member) when he happened to be present there. He was also a member of the S. A. F. O. H., and took a keen interest in every movement that made for the advancement of his profession.

The trade in the United States will, we feel sure, extend sympathy to their Canadian brethren and to the bereaved family in their great loss.

AMONG THE GROWERS

Maywood, Ill.

At the establishment of A. F. Auling, smilax and *Asparagus plumosus* present the greatest attraction. A range of specially constructed houses promises a good crop of both commodities for some time to come. The available cut, on a rough estimate, would be 20,000 strings of smilax, and 15,000 strings of asparagus, the strings running from 18 to 20 feet in length. *Asparagus Sprengeri* is grown very largely; the stock is all in trays carried above the heating pipes—a method both convenient and profitable. A view of the range taken from a point just below the eaves shows conclusively why Mr. Auling is proclaimed the largest grower of asparagus and smilax in the West. There are also to be seen two houses of *Asparagus plumosus* grown for the fronds. Other houses are planted with sweet peas, lilies and adiantum. One range is out of use, due to worm trouble which has been of a malignant character, and has been very hard to overcome. Mr. Auling is at present in California, in company with his brother, E. C. Auling, the well-known Chicago wholesaler.

Wm. H. Auling operates a well appointed range of three houses, each 50 by 200 feet, near the establishment of his brother, A. F. Auling. His specialty is carnations, and his benches at the present time show the results of careful and intelligent culture. *Enchantress* in particular is done in grand shape, and *Winsor*, *White Enchantress* and *Boston Market* look remarkably well. Sweet peas and callas are also well grown.

F. R. Hills has several houses of roses which look very promising for an immediate and heavy crop. *Bride*, *Bridesmaid* and *Richmond* are the principal varieties grown. Mr. Hills, however, thinks highly of *Killarney*, and will probably bench that variety this season. Lilies are grown in quantity at the Hills establishment, as also is bedding stock, and a miscellaneous collection for the local retail store.

Des Plaines, Ill.

The eleven greenhouses of the Des Plaines Floral Company present a fine appearance just now, with excellent crops of carnations, sweet peas and callas. The larger portion of the range is given over to carnations, the varieties grown including *Enchantress*, *Lady Bountiful*, *Mrs. T. W. Lawson*, *Boston Market* and *White Enchantress*. *Boston Market* is to be discarded after this season, and supplanted by *White Enchantress*. *Aristocrat* will also be benched next season in the place of *Mrs. T. W. Lawson*. A house of sweet peas looks particularly fine. A section planted with *Boddington's White* is in excellent yield, many of the flower stems reaching 14 inches in length. In colored varieties *Burpee's Extra Early*, a pink and white, planted from seed November 1, is giving good satisfaction, and *Burpee's Earliest of All*, planted from pots November 1, is furnishing a grand cut. *Mrs. Alex. Wallace*, one of *Zedel's* lavender varieties, is seen in good form here, throwing nice long-stemmed flowers.

H. C. Blewitt has his three houses in good shape, with a benching of sweet peas just coming into crop. He has a nice house of single violets, but the plants show the effect of unavoidably late planting. His soil, however, seems to suit violets, and he will probably

House of Smilax and Asparagus.
Grower, A. F. Auling, Maywood, Ill.

grow more of them next season. Other stock coming along in the range comprises 6,000 *Gladiolus Angusta*, and chrysanthemums. Considerable improvements have been made in the houses recently, including the installation of Foley ventilating apparatus, and a Morehead steam trap, both being very much liked.

Charles Arnold is now running the old range of Peters & Arnold on his own account, and is thinking of rebuilding some of the houses. Sweet peas and carnations are the principal things grown at present.

Charles Wiffin has sweet peas and carnations in crop at his range. He has some fine double stocks, with excellent stems; these are grown between the rows of sweet peas, the stock being grown along outside until frost. The carnations grown are *Enchantress*, *Aristocrat*, *Boston Market*, *White Lawson*, *Rose Pink Enchantress*, and *Red Sport*, but the latter variety will be discarded this year.

Sol. Garland has six 200-foot houses in carnations, and is quite busy just now getting up a stock of cuttings. The benches show a good carnation crop from the varieties *Aristocrat*, *White Perfection*, *Rose Pink Enchantress*, *Lady Bountiful*, *Boston Market*, *Mrs.*

T. W. Lawson, *Enchantress*, *Robert Craig*, *Cardinal*, *Pink Patten*, and *Mrs. M. A. Patten*. The variety *Robert Craig* is seen in pretty good form and does well here. *Aristocrat* is the favorite in pinks, and two whole houses will be benched with it next season. Two houses are devoted to lullious stock—tulips, *Paper White narcissus* and daffodils—and a heavy cut has been taken from them this season.

The eighteen houses of Frank Garland are in good shape, four rose houses looking particularly promising for a fine Easter crop. Three houses of *Kaiserin Augusta Victoria* roses are now being handled in expectation of a nice crop for Easter. These roses are all on their own roots, planted two years ago from one-year-old stock. Several houses are in carnations, the varieties benched being *Enchantress*, *Lady Bountiful*, *Mrs. Patten*, *Mrs. T. W. Lawson*, *White Lawson*, *Aristocrat* and *Cardinal*. There is a house of *Adiantum cuneatum*, and another of *Adiantum decorum*. Considerable rebuilding was done here last season and at present Mr. Garland is busy benching one of the adiantum houses with his new cement bench.

Warren Garland has six of his seven houses in carnations, all being in excellent crop. He grows *Mrs. T. W. Lawson*, *Enchantress*, *Rose Pink Enchantress*, *Pink Patten*, *Aristocrat*, *Lady Bountiful*, and *Boston Market*. The remaining house is planted with sweet peas.

A. E. Longren is busy filling orders for rooted carnation cuttings and reports a pretty fat order book so far this season.
J. H. P.

LILIA PHILIPPINENSIS.—A note by M. Ernest H. Krolage in "The Gardenwelt" for February 15 last, supplementary to one by Herrn Sprenger in the same journal, No. 17, this year, draws attention to *Lilium Philippense* as a substitute for *L. Harrisii*, which is become more and more liable to fall a prey to disease. This lily was botanically described by J. G. Baker in the *Gardener's Chronicle*, p. 1141, in 1873, and the figure accompanying the article was again published on the occasion of the lily conference in London, 1901, on July 20, p. 47. The figure was again repeated, a colored plate was likewise given in *Elwes' Monograph of the genus Lilium*, and in the *Bot. Mag. Tab.*, 6250. The lily was discovered by the traveler, G. Wullis, in 1871, in the Philippine Islands, and sent to the firm of James Veitch & Sons, London. The bulbs flowered for the first time in Europe, in 1873, and on August 6 of that year a first-class certificate was awarded it by the Royal Horticultural Society. For a long time the novelty disappeared from cultivation without having become a trade plant of any importance. Since the occupation of the Philippines by the United States, the plant has come to the front, and chiefly as a consequence of the endeavor to find a substitute for *L. Harrisii*. This search has, for the present, had a favorable result. Imported bulbs, which arrived in Europe, flowered in from two to three months. The plant, apart from the fine bloom, is very ornamental; the small leaf has in a certain degree the same effect as *Crocus Weddelliana*. Crossings with *L. longiflorum* have already been made, and cultural experiments are being carried out at the State Research Station of California, so that in any case in a short period of time *L. Philippense* should prove to be a plant of considerable importance commercially, or as the parent plant for hybridizing purposes.

Sweet Peas at Establishment of Des Plaines Floral Co., Des Plaines, Ill.

Grower, Wm. H. Auling, Maywood, Ill.

Some New Things in an Old Country.

This was the title of a most interesting lecture delivered by J. Otto Thilow of Henry A. Dreer, Inc., before the Philadelphia Florists' Club on Tuesday, March 3, 1908. In the course of his remarks Mr. Thilow took his hearers, in imagination, with him on a tour of England, Belgium, Germany, and Holland, describing in a very manner the various attractive features of the journey. The trip was made in company with J. D. Eisele of the Dreer establishment. "Our reception," said Mr. Thilow, "was with a pomp and courtesy in which I am deservedly participated, and which permitted me to penetrate some of the so-called mecas of horticulture."

Continuing, Mr. Thilow said in part:

"To the horticulturist there is much of interest, especially so when it appears that the conditions seem to be so favorable for the development of plants, some of which we try to bring under subjection to our varying conditions, to which they unwillingly yield. The methods of cultivation followed in the production of plants are the same methods which have been applied for many years, or even decades, with but few variations. We have either not yet learned how to do it, or the system coupled with the conditions will remain where it is. This much, however, can be said of our European brother horticulturist, his training is much more thorough, his early association with plant life, which in some degree is fostered in his home, stirs a more intense love for the art, and an untrifling interest for the vocation. Men and women in the homes of city and country regard the most humble domestic incompletes for themselves and families without plants, flowers or shrubbery under their own personal care. This unborn love for the adornment of the home has been handed down to posterity, so that it has become a part of the nature of children to busy themselves with the care of plants. A much greater impetus to the advancement of horticulture is given by the personal interest of the nobility and the people of means in that they are surrounded with the best taste in the horticultural art, and perpetuate the estates of their ancestors with even more elaborate outlay and show, and do much by personal contribution to perpetuate the interest among those who are engaged in the pursuit of horticulture as a business."

Speaking of Kew Gardens, London, Mr. Thilow said: "The botanical department is of more than ordinary interest in that it is attractive and under a splendid system and care. Many beds were planted with such stock as we could never venture a trial, and were there is full glory. The roses and dahlias were clothed with a wealth of bloom, and a promise of more. The arrangements for studying trees and shrubs, in fact, all plants, were minutely confined to proper labeling, which even to the novice is an evidence that there is need of system and classification in horticulture."

At Covent Garden market the travelers remarked that "much is done in a very short time and at an early hour. At this time, September 26, cut chrysanthemums are in abundance, with the almost glit of roses cut from field-grown plants, and hardy asters (Michaelmas daisies) in masses of color. The fruit and vegetable markets were equally active, and afforded much interest."

"The cities of Ghent and Bruges are highly interesting in horticulture, the home of the azalea and bay, the fields of tuberous begonias, and glass areas of palms. Prominently in all thoroughfares is seen the ever faithful and unpaid laborer, the dog, hitched beneath the hand carts, tugging and helping the load onward; the wooden shoe in evidence on the children in the city, and the laborers in the fields. Ghent is an active city of 160,000 inhabitants, with many places of historic interest. Bruges, one hour's train ride east, is also very interesting and very quaint. The impression left by this short sojourn, the kind attention and courtesy of our Belgian friends, are not to be forgotten."

The points of interest in Brussels, Cologne, Bingen, Frankfurt and Erfurt were next described, the Saxon country the "land of his father's pride," having an especial attraction for the speaker, this being the occasion of his first visit to it. Berlin and Hamburg next received attention. In the latter city "the shopping districts are well supplied with florists' shops, and what can be said of them as being of modern type and up-to-date in their display is also true of the

J. Otto Thilow.

florists' shops in all cities we had been through in Belgium, Germany and Holland. Most striking to an American visitor is their free use of the dahlia in even the most artistic designs, adhering mostly to solid, one-color effects, with ribbons and dyed bass as accessories. The crimson crocus in pots are among the foremost plants in decoration during the Fall season, also scarlet geraniums with adiantums in designs of stunning effect. The show windows comprised two-thirds of the store stock in many cases, so arranged that the customers could walk about in the window among the display of designs and make their selection without disturbing the arrangement. A stop of nearly forty-eight hours in this city of industry was only enough time to become initiated into a few of the pleasures. The German element so deep seated and surrounded by all classes and nationalities places Hamburg foremost among the great cities of the German Empire."

"While it is a fact that the effective methods of display have been long known in America among the aggressive florists, yet we must concede that there has been a simultaneous improvement along those lines in Europe, creating a taste more for the natural than artificial in powers, aided with the liberal use of ferns and graceful vines. These then are new methods in an old country, and it is because the anxious American eye expected to see ancient art with the improved and better flowers of to-day."

Our London Letter.

BY A. HEMSLEY.

THE ROYAL HORTICULTURAL SOCIETY.—The most interesting event of the week was the annual general meeting of this society. The report shows that the society continues to make progress, about 1,200 names were added to the list of Fellows, etc. There seems every prospect of a continual flow of new

fellows. The meeting was held on February 11, 1908, the first busy one of the season. Numerous interesting exhibits were staged, and during the afternoon the hall was crowded with visitors. Among exhibits Chinese primulas were a great feature, these were well shown by Messrs. Suttie & Son, Reading; Messrs. Veitch & Sons, Chelsea; Messrs. Cornell & Sons, Swanley; Messrs. Carter & Company, Holborn; and W. Palmer, Andover, Hants. Among the various collections a great improvement in size and colors of flowers was noted. Carnations were extensively shown, but except some unnamed seedlings from H. Burnett, Guernsey, there were no novelties. Some of Mr. Burnett's were very promising. W. H. Page of Hampton exhibited well known sorts in splendid condition. My Maryland was the best white among various kinds shown in vases of about fifty blooms in each. Mrs. T. W. Lawson was certainly one of the most vases of blooms ever shown. President Roosevelt was the finest crimson. Messrs. H. Lord & Company, Messrs. Cutbush & Sons, and Messrs. Veitch & Sons also made good exhibits. For old hardy flowering shrubs were well shown by Messrs. R. & G. Cutbush and others.

Another New Society. It is proposed to establish a "R. H. S. Gardens Guild" with a view to bringing all old Chiswickians and present employees together for social intercourse, and to publish a journal once a year with accounts of past and present doings. The secretary of the R. H. S. (Rev. W. Wilkes) has promised that the council would grant some assistance for the publication, and give other assistance to the guild. Already a large number of old friends have promised to join. At a preliminary meeting held on February 11 a sub-committee was formed to draw up rules, etc., to be presented to a general meeting on July 8, 1908. It is hoped that in the meantime we shall hear from more old associates. I know there are some in America who were at Chiswick at the time I was there, and if this note should meet their eyes we shall be glad to hear from them. Among those interested in the movement are all the present students and employees of the R. H. S., and of older members of the staff are C. H. Curtis, A. Hemsley, T. W. Turner, E. T. Cook (a former student), W. P. Thomson and others. The secretary is F. J. Wallis, R. H. S. Gardens, Wisley, Ripley, Surrey, who will be glad to forward full particulars of all preliminary proceedings and register names of those willing to join. It is proposed that the subscription shall be, to start with, 5 shillings per annum (minimum).

Cut Flower Display at Exhibition of Illinois State Florists' Association at Springfield.

Our Experiment Stations and What We Have Done.

BY PROFESSOR A. C. BEAL.

Concluded from Page 279.

Tests of Insecticides.

In one different compartments into which the house was divided we are testing the efficiency of some of the leading insecticides now on the market.

In two compartments we are using the insecticides as a spray. In three others for fumigation, one both fumigation and spray and the other check.

At the present writing there appears to be little difference in the efficiency of the different materials tried. In one instance injury was done the plants by using the substance according to the manufacturer's directions accompanying the goods. In some instances injury has been reported from the use of certain insecticides.

It developed that after all we know little about the composition of insecticides, and not having any insecticide law in this State there might be cases where the compound contained little or none of the essential constituent. Pure nicotine is worth not less than three dollars an ounce. It is the nicotine that is the constituent which kills the insects. The price of the preparations was not uniform, neither were the claims of the manufacturers as to the amount of nicotine. However, the price did not vary as to whether the amount of nicotine claimed was small or large. Why this difference? Did a 30 per cent. nicotine preparation contain other valuable material to justify its selling for more than a 40 per cent. nicotine preparation?

There was one way to find out about some of these things and that was to analyze them, which I proceeded to arrange for. This work is in progress and I will call your attention to some completed results.

The insecticides so far as analyzed, with one exception, were ammonia free. The X-L-All vaporizing compound contained camphor in addition to nicotine, while the liquid preparation of the same name, and intended for spraying, contained one-tenth the amount of nicotine with soap or oil.

Among the insecticides available for destroying thrips is hydrocyanic gas, although its dangerous character may practically exclude its use except in the hands of careful men. The only experiments on carnation thrips reported were to the effect it did not kill thrips. We know that it does kill thrips and in order to learn of its effect on the plant a series of tests were carried out on rooted carnation plants from the field. Twenty-eight tests were made on different lots of plants using the gas at the rate of 1 3/4 ounce to 7 ounces per 1,000 cubic feet, and at intervals of from five minutes to one hour with one set exposed for twelve hours, the important consideration being that none of the tests were made at a higher temperature than the night temperature usually carried on carnation houses. The result was that the plants were not injured.

So the experiment has broadened from a mere test of

Richard Vincent, Jr.
From his Latest Portrait.

those insecticides which will or will not kill thrips to a study of the species and their life history, so as to give us an insight into their habits. We know that all the species injuring cut flowers are three common outdoor species, while a fourth is found on the foliage of certain greenhouse plants, and that it is the greenhouse thrips. We know a little something of their behavior toward temperature and light.

We are making progress in the study of insecticides and their efficiency, also their action on the plants. Further than this we have had considerable correspondence with manufacturers of sprayers, etc., and with leading growers over the country about spraying appliances. I would remind you that in solving questions along these latter lines, we solve them with reference to more than one insect pest.

Perhaps some persons may think that we have not reported many results, but I wish to say that the responsibility resting on all connected with this work, whether on the committee or the station staff, and further the amount of capital involved, is too great for any of us to report results which we are not absolutely certain are correct.

Some Notes on the Shamrock.

Recently the writer had occasion to look into the subject of the shamrock, and the following notes gleaned in the course of his research may be of interest at this time. It is quite evident that authorities still differ as to what the true shamrock is, and there is no ground for the belief that it was introduced into Ireland by St. Patrick.

In the ancient literature of Erin the word occurs variously as seamsog, seamrog, seauroge, shamrote, shamrocke, shamroke, shamrogh or shamroote, shamrug, shamroge, seamaroge and chambroch. The word shamrock is Erse, being derived from seamrog, a compound of seamar, meaning trefoil, and og, little—little clover. Seamar is supposed to be the same as sumar, obtained from the Celtic name of the clover—visumarus.

As to the plant itself, it is generally considered that the true shamrock is either the black nonesuch or the Dutch clover, with a decided preference for the first named, on no less an authority than the curator of the Dublin Botanic Gardens, and other competent persons. There are, however, some who hold that *Trifolium repens* or *Trifolium minus* is the true shamrock. Other writers have adopted the fancy of Bicheno, who advocated the right of the wood sorrel to this honor. This last belief may have arisen from the appearance of the word seamsoge, meaning wood sorrel, in old Irish writings referring to the shamrock, but by those competent to judge this is thought to be a misprint, the word seauroge, signifying meadow trefoil, having been meant.

The earliest references to the shamrock in Irish literature deal with it as a food plant.

Campion in his "Historie of Ireland," dated 1571, says in speaking of the food of the common people, "Shamrotes, watercresses, and other herbes they feed upon; oatmele and butter they cram together."

Matthias Lobel, the Flemish botanist, who published his "Stirpium Adversaria Nova," in 1570, appears to be the first botanical writer to mention the plant. He enumerates the purple and the white trefoil, and says of the latter, "It is stated to be good for fattening cattle," adding that the Irish grind the flowers and leaves into a meal, which they knead with butter, and "thrust into their growning bellies, when it sometimes happens they are vexed and nigh maddened with a three days' hunger."

Edmund Spenser, in 1595, also tells of the Irish people feeding on "shamrokes," or watercress, when reduced to starvation during the Munster wars.

In the "Itinerary" of Fynes Moryson, written in 1599, this passage occurs in a description of the Irish: "They willingly eat the herbe shamrock, being of a sharpe taste, which, as they run and are chased to and fro, they snatch like beasts out of the ditches." This statement has given rise to the belief that the watercress was the shamrock, although some have identified Moryson's "shamrock" with the wood sorrel, *Oxalis acetosella*, a trifoliate plant, with acid juice, which grows abundantly in Irish woodlands.

The shamrock food of the Irish was supposed to make them strong and swift of foot. T. Mundy refers to this fact in a work written by him in 1680. The nourishing qualities of the food are also gleaned from the statement of the Earl of Antrim during the siege of Munster by the Earl of Argyll, to the effect that as long as shamrocks were available no apprehension regarding the food supply need exist. About 1772 the shamrock as an article of food in Ireland was supplanted by the potato.

St. Patrick is believed to have lived about 377 A. D.; yet the legend connecting his name with the national badge of Ireland does not make its appearance in the literature of the country until 1681. An English traveler, Thomas Dinely, wrote during the reign of Charles II.:

"The 17th day of March yearly is St. Patrick's, an immoveable feast, when ye Irish of all stations and conditions wear crosses in their hats, some of pins, some of green ribbon, and the vulgar superstitiously wear shamroges, 3-leaved grass, which they likewise eat (they say) to cause a sweet breath. The common people and servants also der-and their Patrick's goat of their masters, which they go expressly to town, although half a dozen miles off, to spend, * * * and very few of the zealous are found sober at night."

The Trinity legend of the shamrock appears first in literature in 1727, in Caleb Threlkold's "Synopsis Stirpium Hibernicarum." Under the heading of *Trifolium pratense album*, occurs the following passage: "This plant is worn by the people in their hats on the 17th day of March yearly, which is called Saint Patrick's Day, it being a current tradition that by this three-leaved grass he emblematically set forth to them the mystery of the Holy Trinity. However, when they wet their seamaroge, they often commit excess in liquor, which is not a right keeping of a day to the Lord, error generally leading to debauchery." A. W.

Richard Vincent, Jr., Going Abroad.

Richard Vincent, Jr., head of the firm of Richard Vincent, Jr. & Sons Company, White Marsh, Md., will leave on April 4 for a trip to Europe. Mr. Vincent will be accompanied by his wife and two granddaughters. The trip is taken for business and pleasure. We have pleasure in presenting herewith a reproduction of Mr. Vincent's latest portrait.

DIRECTORY OF RELIABLE RETAIL HOUSES

FOR THE RETAILER

A Unique Window Decoration.

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words: each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIETH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORESTA, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BBEITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders, they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

EASTER ANNOUNCEMENT CARDS

We have in preparation, and will issue in ample time for the Easter season, six different designs in Easter Announcement Cards, prepared specially for those who sell Easter stock at retail. These Announcements are simple but effective, and very inexpensive. For a set of samples, etc., address

DE LA MARE P. & P. CO., P. O. Box 1697, NEW YORK

The accompanying illustration shows how the window of W. L. Lewis, florist, Worcester, Mass., was decorated during the week of January 13 last. The entire window was arranged to represent an Indian encampment with the rough bark wigwams, canoes and logs. There were three bark wigwams—a large center one and two smaller ones at either side. A background of large ferns and azaleas gave an attractive effect. Tall vases of American Beauty roses and white daffodils were placed around on the floor of the window, and there was a mixture of all the seasonable flowers. These, with the Autumn leaves used, made a very pretty combination. Potted ferns in variety and other plants were mixed with the bright colored flowers and the effect was unusually fine. The opening of the larger wigwam was banked with violets and those of the other two with yellow daffodils and tulips, and a campfire at one corner was very realistic. Overhead, a lattice-work of limbs of birch trees was used, decorated with red and green leaves, from which hung bells of bark, which contained red lights. Bark baskets filled with flowers hung down amid the wigwams and added much to the appearance of the window. Small Indian figures were used and when lighted the window had a red glow which was very beautiful. Bark boxes with violets and sweet peas peeping out were to be seen at the front of the window.

Window Display of W. L. Lewis, Worcester, Mass.

A Kentucky Design.

Our illustration represents the design adopted by the Kentucky Society of Florists. This was executed by Jacob Schulz. We have made it a rule to follow the membership list, in order to tell who is to do the work.

CLUB AND SOCIETY DOINGS

CONNECTICUT HORTICULTURAL SOCIETY.—The regular meeting of this society was held in County Building, Hartford, on Friday, February 28. President Huss in the chair. It was cyclamen night and there was a large attendance, about 35 members being present. President Huss named Messrs. Sieman, Vidbourne, and Gerard as judging committee, and their awards were as follows: Certificates of merit for two specimen plants cyclamen to C. Peterson; collection of six varieties cyclamen to J. F. Huss; Cineraria stellata, to same exhibitor; Cineraria stellata, to A. J. Weber. A diploma for Primula obconica, six specimen plants, to P. Zuger.

W. N. Shumway, Berlin, Conn., exhibited for the first time a carnation of the Enchantress type, of which it is a seedling, color deep pink. Mr. Shumway has grown this carnation for five years, and says it is practically a non-splitter, a good grower, and equally as prolific as its parent. A special judging committee awarded this promising variety a certificate of merit.

F. Roulier read an excellent paper on "Cyclamen Culture," which was of much interest, especially to the amateur members. Mr. Roulier is one of our most successful cyclamen growers, and the skillful way in which he treated his subject was heartily applauded. The paper was followed by a lively discussion on the advisability of saving old bulbs; the general opinion was that while an occasional specimen plant could be produced from an old bulb, the only profitable way would be to grow them annually from seed.

G. W. Smith was appointed delegate to attend the coming convention of the Massachusetts Fruit Growers' Association, March 11-12, at Worcester, Mass.

The membership of this society is steadily increasing; at this meeting twelve new members were added to the roll.

ALEX. CUMMING, JR.,
Secretary.

CANADIAN HORTICULTURAL ASSOCIATION.—It has been decided to hold a meeting of the executive committee of this association at Niagara Falls, Ont., on Wednesday, March 25. Further particulars as to time and place will be given later.

March 7, 1908

Huntington (N. Y.) Horticultural Society Show.

The fourth annual carnation exhibition of the Huntington (N. Y.) Horticultural and Agricultural Society was held on February 25. There were numerous entries and the quality was excellent. The display of flowering plants and Spring flowers attracted much notice. There was a gratifying attendance. The judges were Samuel Riddell, Farmingdale, N. Y., and Henry Weston, Hempstead, N. Y.

- The following awards were made:
- Twenty-five Lawson—First, H. T. & A. H. Funnell, Huntington, N. Y.; second, Charles Weber, Lynbrook, N. Y.
 - Twenty-five Eucharantess—First, Kramer Brothers, Farmingdale, N. Y.; second, White Brothers, Gasport, N. Y.
 - Twenty-five white—First, Chas. Weber, with White Perfection, second, H. T. & A. H. Funnell, same variety.
 - Twenty-five scarlet—First, Henry Weston, Hempstead, with Victory, second, White Brothers, with Beacon.
 - Twenty-five any other color—First, Chas. Weber, with Imperial, second, H. T. & A. H. Funnell, with Winsor.
 - Twenty-five assorted—First, August Heckscher (Adolph Albus, gardener), second, Walter Jennings (Richard Cartwright, gardener).
 - Twelve tea roses—First, A. Heckscher. One hundred double chabots—First, W. Jennings; second, H. T. & A. H. Funnell. One hundred single violets—First, W. Jennings; second, W. J. Matheson (Gas Kirby, gardener).
 - Twenty-five freesias—First, Riddell & Herrick, Farmingdale; second, H. T. & A. H. Funnell. Twenty-five sweet peas—First, H. E. Hyde, Centerville, second, Kramer Brothers. Twelve nigamonts—First, A. Heckscher. Blooming plant—First, A. Heckscher. Second, W. Jennings. Foliage plant—First, A. Heckscher; second, H. T. & A. H. Funnell. Spring bulbous or other flowers—First, W. Jennings; second, A. Heckscher. Greenhouse Vegetables—First, A. Heckscher; second, W. Jennings.

A. H. FUNNELL, Secretary.

Carnation Night at Utica, N. Y.

The Utica Florists' Club held its seventh annual carnation meeting on Friday, February 28, and it was in every way a gratifying success. The attendance was good, and there was a fine display of carnations of the newer and standard sorts. Stevenson Brothers, Govanstown, Baltimore, Md., sent a large vase of Splendor, which was very much admired; it was confidently predicted that Splendor is a comer. A vase of a pink named Victoria, from J. H. Cushing, Quindick, R. I., attracted much favorable attention, as did a yellow from Paul Thompson, West Hartford, Conn. President Seelye, white, from H. W. Field, Northampton, Mass., showed up grandly and was well liked. Peter Fisher, Ellis, Mass., staged Beacon; this variety hardly needs any comment; it is admired wherever shown. Harvard from J. D. Cockeroff, Northport, L. I., was surely the best crimson ever seen here and must be a winner.

A vase of 50 Afterglow, from Richard Witterstaetter, Cincinnati, O., arrived in splendid condition. The same variety was staged by the E. G. Hill Company, the flowers also traveling well. They were grand in every way, the color being especially good.

W. A. Rowlands, Whitesboro, N. Y., had two large vases of 100 each of Eucharantess, extra fine; White Perfection. Mrs. M. A. Patten, Mrs. T. W. Lawson and Victory. Lawson was shown as good as it ever was.

L. F. Goodwin, Clark's Mills, N. Y., exhibited 75 White Perfection, the finest ever seen in Utica. J. O. Graham, Little Falls, N. Y., had fine vases of Eucharantess and Rose Pink Eucharantess. W. P. Pfeifer, Utica, N. Y., staged superb Eucharantess, Rose Pink Eucharantess, White Eucharantess and Winsor. Mr. Pfeifer has a house 30x125 feet, containing 3,500 plants of the varieties he exhibited, which at the present time is a grand sight.

A large bunch of the new violet Boston, from William Sim, Cliffondale, Mass., proved it a good shipper and keeper, and its sweetness lasted longer than that of any other violet ever shown here. It is a fine addition to the single violets.

A vase of 50 Rhea Reid rose from E. G. Hill Company, Richmond, Ind., was fine; this variety seems to have all the good qualities in stem, foliage and flower, and a perfect color.

Robert Scott & Son, Sharon Hill, Pa., sent a vase of the new rose, Mrs. Jardine, which was very much admired.

C. W. Bussinger, New Hartford, N. Y., showed excellent hyacinths and narcissus. After the flowers had been duly inspected the boys adjourned to partake of a banquet which was enjoyed until a late hour.

Among visiting florists were observed J. O. Graham, Little Falls, N. Y.; T. Schesch, Ilion, N. Y.; Mr. Kilbourn, Clinton, N. Y.; John Humphrey and Mr. Beilby, Rome, N. Y.; and T. A. Taylor, Canastota, N. Y.

The Florists' Club will hold no meeting in March, but in April we are invited to W. A. Rowland's, Whitesboro, N. Y., to enjoy a Winter clambake. Your scribble will guarantee all a fine time.

New York.

The Club Dinner.

The annual dinner of the New York Florists' Club was held on Saturday evening, March 29, in the Hotel St. Denis, forty seven members and their friends being present. The dinner was served in the usual good form of the proprietors of the St. Denis, so well known to the members who attend these occasions regularly, and was thoroughly

enjoyed. One diamond pin to the returning guest, Charles H. Totty, Robert Scott's presentation. This was a genuine surprise to Mr. Totty, and he accepted the gift with a few appropriate words. A vote of thanks was accorded the dinner committee for the excellent manner in which they had carried out the arrangements. At 11:30 the orchestra struck up Auld Lang Syne, and the happy event was brought to a close by the members rising and singing this parting anthem.

The Week's News.

The regular monthly meeting of the New York Florists' Club will be held in the club's rooms, the Murray Hill Lyceum, Thirty-fourth street near Third avenue, on Monday evening next, March 9. Professor Corbett of Washington, D. C., will talk on the "Preparation of Soil for Greenhouse Purposes," which should bring out a large attendance.

The chairman of the outing committee of the New York Florists' Club, W. E. Marshall, informs us that the annual outing of the club will be held on Wednesday, July 1, at Witzel's Point Grove, College Point, L. I. The steamer Isabel will convey the excursionists to the grove.

An Elevated View of Asparagus House of A. F. Anling, Maywood, Ill. (See page 312.)

enjoyed by every one present. The Metropolitan Orchestra discoursed sweet music, and laughable stories were interrelated by Mr. Rice. The table decorations were elaborate, consisting chiefly of roses, carnations and narcissus, supplied by several of the wholesale members of the club.

President Weathered acted as toastmaster, and filled that office in a most acceptable manner. The toastmaster read a letter from Patrick O'Mara, who, unfortunately, could not attend owing to a previous engagement. The toast "Our Night" was delegated to Charles H. Totty, who replied very feelingly, and in the course of his remarks, impressed forcibly upon the members that, although he was an ex-president, he was still a full member in the private ranks, and would do his utmost at all times to further the interests of the organization. The toast "S. A. F. O. H." was responded to by President F. H. Traudny.

The burden of his speech was an earnest appeal to all members of the club, as well as all Eastern men connected with the florist business, to use their endeavor to help in some way or other the great national show to be held in Chicago next Fall. "Our Sister Societies" was replied to by E. V. Hallock, who handled his subject in a most impressive manner, mentioning the fact that the society formed on the East Side among the very poor for the distribution of window plants was a sister society; also, that the Royal Horticultural Society of England was a sister society. Mr. Hallock used these two illustrations to impress upon his hearers that the sister societies of the New York Florists' Club embraced any organization that had the betterment or the advancement of horticulture at heart; that we were all working along the same lines, in our own way, and all were doing some good to the world at large.

One of the most pleasant features of the evening was the presentation of a

and Stow's orchestra has been engaged to furnish music. Horticultural societies around New York are to be asked to attend and sister societies will be invited to cooperate. The following gentlemen have been added to the outing committee: W. Rickards, J. Fournich, P. Kessler, L. W. Wheeler, R. Berry, H. A. Emyard, H. Hoffmeier, A. J. Guttman, John Donaldson and C. H. Totty. been made time and time again at a price of \$10 each. Mr. LeMont is of the opinion, though, that the old-time sentiment for flowers is getting somewhat choked, and, as time goes on, it will be only the funeral that brings forth a demand for magnificent displays.

In last Sunday's Sun an illustrated article appeared on that prominent Bowery florist, Adolf LeMont. The article was in the nature of an interview with Mr. LeMont, and gave a very fair description of the flower business as it has been found on the Bowery for the last twenty-five or thirty years. Of course, it is nothing new that there is as much sentiment among the lumber folk as is found among the Fifth Avenue residents, and many touching stories connected with flowers, particularly for funeral purposes, and related by Mr. LeMont. He also mentions that duplicates of the trial bouquet of Miss Alice Roosevelt on the occasion of her marriage to Nicholas Longworth, which cost \$200, have been made.

Charles Thorley has a sign in his Broadway store offering to let the whole or part of the store. Mr. Thorley established a magnificent store at Forty-fifth street and Fifth Avenue several years ago, and since that time has opened other branches further uptown. Evidently, the florist, like many another business, is destined for farther uptown. Since the first of the year a change has been made in the King Construction Company, and the two concerns, one located at North Tonawanda, N. Y., and the other at Toronto, Canada, are now being run as entirely separate firms.

W. E. Marshall, Chairman of the Outing Committee of the New York Florists' Club, will be held in the club's rooms, the Murray Hill Lyceum, Thirty-fourth street near Third avenue, on Monday evening next, March 9. Professor Corbett of Washington, D. C., will talk on the "Preparation of Soil for Greenhouse Purposes," which should bring out a large attendance.

The chairman of the outing committee of the New York Florists' Club, W. E. Marshall, informs us that the annual outing of the club will be held on Wednesday, July 1, at Witzel's Point Grove, College Point, L. I. The steamer Isabel will convey the excursionists to the grove.

Among the prominent guests that assembled to celebrate the opening of the Hudson River tunnel on February 25 was Frank W. Kelsey, the well-known nurseryman. Mr. Kelsey was also present at the banquet given at Stuyvesant in the evening, one of the best affairs of its kind, long to be remembered.

James Dean has returned from Texas, whither he went some time ago with his daughter. We are glad to say that she is now much improved in health, and will remain in Texas for about a year.

E. R. Person of Tarrytown, N. Y., was in Boston last Saturday on a business trip.

Pittsburg.

Trade Notes.

This is Shrove Tuesday, the beginning of the Lenten season, and for the next six weeks little will be going on in society affairs, excepting small informal teas, dinners and card parties. It is hardly possible that cut flower trade can be much worse than it has been, for the past few weeks were slow enough. There are lots of flowers on the market and prices are away down on everything except roses. Carnations are still a glut; prices variable. Bulbous stock is sold at such rates by the small gardeners that they hardly realize the price of the bulbs; tulips are lower than they have been for many years. Plant trade is very backward; the weather is to blame. The seed business is also rather slow for the time of the year.

Breitenstein & Flemm will move from their present location, corner Liberty and Market streets, April 1, to Liberty Avenue, between Sixth and Seventh Avenues. The building will be remodeled and a fine store will be fitted up, as the firm has taken a long lease. The old place, which will be vacated, has been a flower store for many years, opened up by R. C. Patterson, now deceased, one of our first wide-awake florists, and has always been conducted as a first-class stand.

A visit to the Philipps conservatories in the North Side parks showed things in pretty good shape. The palm house has been gone over and is in tip-top condition. The show of blooming begonias some weeks back was one of the best ever seen.

John Rader is getting busy for the plant trade. His stock is in good shape, especially ferns, of which he makes a specialty. I. C. REISMAN.

St. Paul.

News Notes.

The first meeting of the Twin City Florists and Gardeners' Club was a success. The members on invitation visited the seed and floral establishment of L. L. May & Company on Carey Avenue. About 60 were present and spent a very enjoyable and instructive afternoon.

The Midwinter meeting of the Minnesota Ros. Society will be held at the city Saturday, March 7.

Real sales are in a very good shape, and the latter part of February stock has been plentiful and of fine quality. Funeral work has been extra heavy.

The Greeks have evidently come to stay. One large department store, a well-known of Bowery section, and a leading contractor has a set of signs which bear the decorations 500 "Greeks" and only flowers. The signs appearing in the display windows since 1907 have been the Greeks.

CLASSIFIED ADVERTISEMENTS

Cash with order. The columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or other Wants, also of Greenhouse, Land, Second-Hand Materials, etc. For Sale or Rent.

Our charge is 10 cents per line 17 words to the line, set solid, without display. No ads. accepted for less than thirty cents. Display advertisements, in these columns, 15 cents per line, count 12 lines agate to the inch.

If replies to Help Wanted, Situation Wanted, or other advertisements are to be addressed care of this office, advertisers add 10 cents to cover expense of forwarding.

SITUATIONS WANTED

SITUATION WANTED—By Swede, aged 23, private place preferred, good experience in greenhouses and outside. Best of references. Address, G. Ohlsson, 539 Third Avenue, New York City.

SITUATION WANTED—By young man, well experienced in greenhouses, wishes work in nursery, or with landscape gardener; best of references. Address, V. M. care The Florists' Exchange.

SITUATION WANTED—Young man wants a position in greenhouses to learn the florist business, strong and willing worker. Address, Alfred Eichler, 130 Randolph Avenue, Jersey City, N. J.

SITUATION WANTED—By rose grower on commercial place; up-to-date and producer of first-class goods, and can prove same. Address, A. B. C., care The Florists' Exchange.

SITUATION WANTED—Foreman's position wanted by married man, 18 years' experience, roses and carnations a specialty. Personal references. State particulars. Address, Hortico, care The Florists' Exchange.

SITUATION WANTED—As foreman, grower, wholesale or retail. Best experience and references. Married; Eastern states preferred. Address, R. G., care Marshall & Company, 144 West 23d Street, New York City.

SITUATION WANTED—As head gardener on first-class private place, aged 31, thoroughly experienced under glass and in general gardening. Please state full particulars in first letter. Address, M. O., care The Florists' Exchange.

SITUATION WANTED—First-class grower and designer, to take charge of commercial or private place; large experience in landscape work and handling help. Middle-aged; no family. Address, W. A. W., care The Florists' Exchange.

SITUATION WANTED—German florist, 25 years of age, 10 years in this country, wants position in general greenhouse work, 10 years' experience, good and willing worker. Address, Anth. Mier, care Rindler, 1237 Avenue A, New York City.

SITUATION WANTED—As head gardener on private place where choice palms, ferns, orchids, cactus plants, etc., are growing; outside plants also. Single, aged 31, best of references. State full particulars in letter. Address, E. E., care The Florists' Exchange.

SITUATION WANTED—By German gardener and florist, married, 30 years of age, 10 years' experience in landscape gardening and greenhouse cultivation, wishes position as foreman on first-class private or commercial place. Good references. Julius Bauer, P. O. Box 205, Bordenown, N. J.

Vegetables Under Glass.

William Turner of Oceanic, N. J., addressed the Mass. Horticultural Society Saturday morning on "Forcing of Vegetables Under Glass." Whoever, he said in beginning, wishes to have success in this line, must have a love for the work and watch the developments so as to know when and how to feed them. As a private gardener, he confined his remarks to private establishments in general, and the house he recommended was from 20 to 28 feet wide, with a preference toward east and west, and hot water heat.

"Experience has taught me," said Mr. Turner, "that some soils will take much more food than others. I claim there can be no hard and fast lines laid down in regard to how much fertilizer a certain crop shall receive for best results. My theory has always been that each grower in different localities, and different soils, by studying the condition of his growing crops is the best judge as to how much food will be of benefit. I have no doubt there are various opinions on this one important subject—feeding—but the grower, who carves his own road, using his own good judgment, will usually come out the most successful. We know to produce good crops, potash, phosphoric acid and nitrogen are a necessity. This should be applied to the soil in some shape or form. I am confident whoever has given this question study and deep thought will stand by his own good judgment; self-taught experience one never forgets. Pages could be written on this one subject alone—feeding.

Lettuce.

"The demand for lettuce is ever increasing, and without doubt this is one of the main Winter crops. Whether for private or for commercial purpose, monstrous houses have been built for the lettuce industry within the past few years, which probably twenty-five years ago would have been thought madness. Years ago lettuce was grown on raised benches. It was thought of much benefit having the plants near the glass, but certainly a mistaken idea, for those cool-blooded vegetables. In the first place, it is too hot for the roots; and, second, the plants require too much water on the benches. One great advantage in solid beds is, the crops don't require water very often. In fact, if the surface soil can be kept on the dry side, provided there is plenty of moisture below, the roots then will have a tendency to work down, giving the plants health and vigor, which is all-important for best results, but a thorough good watering just as they begin to head will help to increase the size and quicken maturity. Airing plays an important part as regards success or failure with this ever-popular vegetable. The most dreaded fungus or disease is commonly called sunburn, although this is an erroneous idea, as the disease spreads more readily in a spell of dull weather than when it is bright. One thing is certain, when a crop is badly infested it is useless; better throw it out, take the top soil out and replace with fresh or sterilize the soil, as the only safeguard to eradicate the evil.

Cauliflower.

"Probably there is no vegetable more improved by growing under glass than cauliflower, requiring the same treatment in every respect as lettuce, as regards temperature, solid beds, etc., but the soil used may be of a trifle heavier nature and it is perfectly safe to feed them considerably more than lettuce, as they are strong rooting vegetables. Yes, even during the short days this vegetable will respond readily to liberal treatment. I would not advocate starting the plants before say the first week in September. Sow seed according to the number of plants required. Transplant once about four inches apart, then in about three weeks transplant again where they are to mature, in rows 18 inches apart and 15 inches in the rows. The first crop should be ready to cut from the first of December on. For a succession sow seed two weeks apart. Cauliflower delights in rich compost, and without doubt a liberal supply of hardwood ashes is a capital fertilizer for this crop. I question if there is another vegetable forced that will take as much nitrate of soda to good advantage as the cauliflower.

Radishes.

"Radishes are easily produced under glass. I have seen it recommended taking a crop of radishes from among lettuce or any other growing crop, the idea being that the radish crop under favorable conditions will mature in about a month from the time of sowing the seed. However, this method I am not in favor of, claiming that one crop at a time is sufficient even if grown under glass. While radishes are of easy culture, it is true, I think that I am safe in stating that many a batch of radishes has been destroyed by the erroneous impression that this crop needs little or no attention. If left in the bed too long they get soft and pithy, comparatively useless at that stage. The very best seed obtainable should be used for this purpose. Radishes can be grown successfully in the lettuce house temperature.

Tomatoes.

"Good tomatoes can be had either in solid beds or raised benches. But for the Winter months raised benches are decidedly to be preferred. Wonderful progress has been made in recent years in the quantity of tomatoes consumed compared to years ago, and particularly so with the forced products, not only in the private establishments, but it is also quite a commercial enterprise. In the first place we should aim to start plants so that there will be a good set of fruit before the shortest days set in; this will give a heavy picking through the shortest days. To get this seed should be sown not later than the first of August. Those plants for Winter forcing I prefer growing in pots up to 5-inch, potting firm; nothing like having stocky, short-jointed thrifty plants to set in the bench. Tomatoes are not particular as to soil. However, the best is none too good for the work. What I would term a good rose soil would be ideal for tomatoes, with about half the quantity of manure. Four or five inches of soil is sufficient to mature a heavy crop of fruit. One of the main features in keeping a healthy, vigorous growth is the temperature. I am not an advocate of high temperatures (say 60 at night, 70 to 75 degrees in the day, according to conditions of weather, and give air every available chance, never allowing the foliage to get soft and flabby), then there will not be much trouble with mildew and kindred diseases.

Cucumbers.

"Years ago if we produced a crop of cucumbers in the Fall and another in the Spring it was not altogether necessary through the shortest days. Now there is a call for them at all seasons. Probably the commercial grower has been responsible for popularizing this vegetable in a general way more than the private gardener, as their produce goes on the market where it is sold broadcast to the public, which naturally causes a brisk demand. I believe I am correct in stating that Arlington growers were the first to see the possibilities of raising cucumbers on a large scale for market as a financial success, and to-day I believe Arlington is the largest center for this ever-growing enterprise. Heat, moisture and careful airing are the important items to contend with. While cucumbers are rapid, vigorous growers, with good treatment, on the other hand any neglect is easily detected by the stunted appearance of their growth. In fact, a severe check is disastrous. There is an advantage in one way in growing the English cucumbers in Winter. They need no fertilizing, not unless it is necessary to procure some seed.

Beans.

"While beans are not grown commercially, under glass, they are very acceptable for the private table, and far superior to any that can be procured in the open market during the Winter months; therefore, for private greenhouses beans are to be highly recommended as a forced vegetable. When grown successfully it is surprising the number that can be gathered. There are two methods of growing this crop—in pots or on raised benches. If grown in pots, half fill six or seven-inch pots with fairly rich, porous soil, then plant about six beans in a pot. As the beans grow keep adding soil by degrees, until filled. It takes about seven weeks to mature a crop grown in a temperature of 60 to 65 degrees at night, with 70 to 75 day temperature. The bench system is my preference, as there is not so much labor and attention required, and results are equal, if not better.

Rhubarb.

"I do not consider the forcing list complete minus rhubarb. There is considerable demand for this wholesome vegetable, both private and commercially. It requires very little attention; the main secret is if the roots are dug for forcing they should get a thorough freezing before they are taken into the forcing house. Also leave as much of the soil adhering to the roots as possible. These roots may be forced successfully in the mushroom house or under the tomato house bench, setting the roots close together, filling in the hollow spaces between the roots with soil or leaf mold—anything to hold moisture. Every two weeks a fresh supply of crowns may be brought in according to demands.

"Greenhouse vegetable forcing has come to be one of the important branches of our profession, and appeals readily to the consumer, as they are not subjected to extreme temperatures such as our early garden vegetables are at times. The results are they are tender and can be appreciated by all."

Washington, D. C.

Trade Items.

Notwithstanding the condition of the money market and the glut of carnations incident to the season, the past week for business was exceptionally good. A few socials were rushed through prior to the Lenten season, and each of these used its quota of flowers; but, on the contrary, many were postponed owing to the hand of death which has recently fallen so heavily upon some of Washington's most prominent and popular citizens. There has possibly never before been an occasion for which such costly and elegant funeral work was required as at the interment, on February 25, of Bishop H. Y. Satterlee. His remains were placed by request in "The Little Sanctuary," at Mount Saint Albans, the site of Washington's grand new cathedral now in course of erection, and which is the result of the life purpose and work of the beloved Bishop. Space being limited in the sanctuary the wagonloads of floral offerings, composed of the costliest flowers, including hundreds of orchids, were placed around the large granite "Peace Cross" on the lawn, overlooking the city, and subsequently distributed among the various hospitals about the city. The altar in the Little Sanctuary, before which the casket rested, was completely covered with 800 Ascension lilies and 10,000 single violets; these were supplied and arranged by Z. D. Blackstone. Outside there were over 150 pieces, marvels of floral art and beauty. The President and Mrs. Roosevelt sent three different pieces of rare beauty, composed chiefly of orchids and lily of the valley, with Easter lilies. Chiefly noticeable were a wreath of violets, sent by Postmaster General and Mrs. Meyer; a large bunch of violets, sent by Secretary and Mrs. Garfield; a huge cross of purple orchids and lily of the valley, sent by the Cathedral Chapter; a large cross of orchids from the Washington Cathedral Association; a 5-foot wreath of orchids and lily of the valley from the New York church of which he was pastor. This was one of the most elaborate funerals ever held in Washington.

A close second was on Saturday, when the remains of Hon. Crosby S. Noyes, one of our most distinguished citizens, were buried from St. Thomas' Church. Here again most magnificent floral tributes poured in by the score from all parts of the city. A sad coincidence is related in connection with the demise of Mr. Noyes, that in California, realizing his end was near, he requested that his remains be transferred to Washington, and that Bishop Satterlee officiate. The two gentlemen died within a few hours of each other.

The funeral of E. F. Droop, the head of one of the oldest established music houses in this city, took place on Monday, and here also costly floral art was in evidence on all sides.

On Sunday Washington experienced its first Spring sheet.

Comes nearest to Fiancee, but is a different type flower. Never Bursts—Every Calyx Perfect. Good, shapely, active growth. Blooms early and in quantity. A grand commercial variety. Give it a trial and compare the returns. We have a large stock, clean and healthy. Will guarantee every cutting to be first-class. Order now for early delivery. Price, \$12.00 per 100; \$100.00 per 1000. Larger lots, prices on application. With our additional glass we have more than doubled our stock of Carnation plants, and can fill orders for rooted cuttings to even better satisfaction than in past years.

F. DORNER & SONS CO., Lafayette, Ind.

THE NEW LIGHT PINK CARNATION MAY

You will find in this variety one which you will want to grow in large quantity after you give it a trial. It is one of the few varieties which come in early and keep continually at it until transplanting time. The color is better than Enchantress and the bloom is better than Fair Maid and it is freer than either of them.

We are now sending out fine, strong, well-rooted cuttings. Let's have your order now. \$12.00 per 100; \$100.00 per 1000.

Also other new and standard sorts. All the best varieties at current prices. Our stock is in prime condition.

REVIEW OF THE MARKET

NEW YORK.—The supply of American Beauty roses shows a decided increase, and prices are being affected materially. On Tuesday 35c. was the outside figure for specials, and some went at even lower than that. Bride and Bridesmaid roses have not shown any increases as yet, and values remain about the same. In some quarters there has been a slight falling off in the supply of carnations, but this has been more than made up in other places, so that it can safely be said that so far as this city is concerned, carnations are still as plentiful as ever and no change in prices is noted. In some of the bulbous stock, particularly Paper White narcissus, there is not such a surplus on hand as has been the rule for several weeks; still, there is enough to meet all demands and market prices have not been affected. Lily of the valley is yet a difficult proposition to deal with, so far as clearances go; and the supply of lilies and callas is more than ample for the needs. Violets are plentiful, as are sweet peas; the latter are even far cheaper than they were a week ago. With favorable weather, which we may reasonably expect from now on, the street merchants will be able to work every day, and perhaps better clearances will then be made.

CHICAGO.—The market is dull and monotonous, with a local demand small in character and an outside business which is not as might be expected for the time of year. An anticipated extra demand from New Orleans for Mardi Gras requirements this week did not materialize, at least in so far as the majority of wholesalers are concerned. An overabundance of stock continues to be a feature of the market, about the only exception to the general condition being American Beauty roses in the higher grades, which are still very scarce. Other roses are very plentiful, and do not move so actively as a week ago. Receipts of carnations are somewhat lighter than for a couple of weeks, but with a decline in the general demand for flowers the difference is imperceptible, and large stocks are on counters and in iceboxes. Bulbous stock moves very slowly, and much goes to waste. The local retailers appear to go the limit in stocking up, but the bulk of their purchases have to be used for window display, and the windows of many establishments in the downtown districts display more stock than is sometimes seen in wholesale quarters. Lilies are very plentiful, and move only fairly well, notwithstanding the commencement of a season when they should meet an active demand. Violets are not so strong as they have been, and prices have declined. Lily of the valley is not quite so plentiful, but there is more than enough to go around. Orchids, cattleyas in particular, move very well, for the reason that the supply is on the short side. Some fine Cattleya Schroederiana is coming in. The dark and unsettled weather experienced during the past few days has proved beneficial in shortening receipts, and a few days of fine weather, which now seems a possibility, may result in a reaction which will be welcomed on every hand.

J. H. P.

BOSTON.—Trade is still improving. Prices have not advanced a great deal but the demand continues better. Roses are more plentiful and the quality is very fine. Carnations are still very abundant but clean up fairly well daily. Violets sell well. Sweet peas are of fine quality. Lilies are not much in demand except for funeral work. Lily of the valley sells well. Antirrhinums and such flowers are now quite plentiful but they have only a limited call. Bulbous stock is becoming very plentiful and cheap. Prices of the better grades of tulips and narcissus have been fairly good but now have taken a drop.

J. W. D.

CLEVELAND, O.—The market is heading up with carnations, roses and bulbous stock. Violets are plentiful and bring \$1 per 100. Good lily of the valley is scarce, selling at \$4 per 100. Great preparations are making for St. Patrick's Day and green carnations will be in demand. O. G.

Do Not Order Your Easter Advertising Matter Until You Have Examined Our Original

EASTER Announcements

Successful Business cannot be obtained without special endeavor. One's own personal efforts need backing and the most helpful backer is WELL-DIRECTED ADVERTISING, carefully selected and freely used.

For those florists who cater to the EASTERTIDE TRADE, we have prepared six graceful and attractive designs which we offer at a price that appeals to the user of good printing. We furnish THESE EASTER ADVERTISING ATTRACTIONS in the shape of small oblong four-page folders, printed in the finest style and on the best heavy enamel paper, with the engraving covering the front page and the advertisement on the third page. A fine quality baronial envelope is included in the price.

Delivery is F. O. B. New York at the following prices:

100 Folders and	100 Envelopes.....	\$3.50
250 Folders and	250 Envelopes.....	6.00
500 Folders and	500 Envelopes.....	10.00
1000 Folders and	1000 Envelopes.....	18.00
Each additional 1000, at same order.....		15.00

On orders for 500 or over customer may select two or more styles without extra charge. If interested, send at once for a sample set of these Announcements. They are original designs, made expressly for the season of 1908, and will interest you. It only costs one cent to look them over.

We expect lots of orders for these Announcements, so would advise you to act promptly if you wish yours filled in good time. Address

Special Easter Advertising literature made to order. Let us know what you want and we will be glad to quote you. Time is passing; write now.

Post Office Box 1697
 NEW YORK CITY, N. Y.

INDIANAPOLIS, IND.—The increase in counter trade as well as a number of small decorations have given the retailers much encouragement. Funeral work remains up to the standard and is the outlet for a part of the enormous supply on hand. The season is singular for the profuse and grand varieties of plants and flowers displayed in the flower stores and conservatories, which give them a holiday appearance. Single and double violets, eternally modest, but not so in numbers at present, are disposed of at 50c. to 75c. per 100. The first mentioned suffer decidedly from a spell of cloudy weather and cause the retailers much annoyance. Carnation prices are lower than at the corresponding date last season; fancy stock is often wholesaled at \$2.50 per 100; white outsell the other colors. At no time are green goods difficult to obtain, but prices never suffer. Bulbous stock is forging ahead in an alarming manner, for so values suffer accordingly. Plant sales early a date; more of it is grown, too, than can well be taken care of, and are most gratifying, but nothing short of the meticulous would enable the growers to dispose of all their output at a profit. I. B.

ST. LOUIS.—The Lenten season is about to set in and society will wind up its social affairs. This is bound to make business somewhat dull for the next six weeks, especially with the West End florists, who do most of the society work, while the downtown florists are more or less favored with orders for funeral work and over-the-counter sales. Quite a few weddings and parties are booked for the next few days.

The wholesale market the past week was fairly alive with stock of all kinds and of good quality. Carnations are more plentiful than roses, extra good white sell well. There is an oversupply of red, pink and Enchantress, which bring from 75c. to \$2 per 100. Roses are becoming more plentiful every day in all varieties and sell at from \$2 to \$8

per 100. Violets go at \$2 to \$3 per 100; sweet peas, 40c. to 75c.; lily of the valley, \$1 to \$2 per 100. Of all kinds of bulbous stock there is more than the demand calls for, plenty going to waste. Prices on these can hardly be quoted; everything is a glut. Greens are selling nicely at regular rates. ST. PATRICK.

NEWPORT, R. I.—The condition of the market in Newport is not very satisfactory; the only business of any volume transacted is the filling of funeral orders, of which there certainly have been a large number during the last week or two. All kinds of flowers are so plentiful and low in price that Newport is now feeling the effects of these conditions. The birthday and anniversaries of Washington and Lincoln had no apparent effect on this market; the same may be said of St. Valentine's Day.

Plants are not moving at all, and it looks as if they would remain stationary until Easter. Although it is yet too early to say much in regard to the local supply of Easter stock, it looks as though a great deal of what will be required will have to be procured elsewhere. D. M.

ROCHESTER, N. Y.—The market is very dull here. The material shipped in is of good quality. Some exceedingly fine extra special Bridesmaid roses were received this week from Lake View. Roses sell at \$2 to \$4; carnations, 75c. to \$1.50. Bulbous stock at your own price, especially lily of the valley, for which there seems to be no call whatever. Harrisii lilies bring from 4c. per flower up, according to quality. C.

CONCORD JUNCTION, MASS.—For St. Patrick's Day Leonard Cousins, Jr., is growing a large number of shamrock in 1-inch, also in 1 1/2-inch pots. The advance orders indicate an increasing demand for these tiny plants among patriotic Irish people throughout the country.

FIRMS WHO ARE BUILDING.

OSKALOOSA, IA.—The Kemble Floral Company has added a new greenhouse of large dimensions, and made several other improvements on their establishment.

CHANGES IN BUSINESS.

TOLEDO, O.—The Schoen Floral Company occupied its new store, 409 Adams street, on March 1.

WATERLOO, N. Y.—Sidney Kunej has succeeded the firm of Smith & Kunej, florists and gardeners, 208 North Stark street.

RACINE, MASS.—Mrs. John Shaw has made arrangements to continue the florist business of Mrs. C. W. Pike at 216 Fourth street.

DENVER, COL.—The Alpha Floral Company has been incorporated with a capital stock of \$5,000; incorporators: E. S. Kennedy, L. O. Brown, and W. S. McClain.

TRENTON, N. J.—Austin C. Apgar, for forty-two years connected with the State schools and for fifteen years professor of botany in the State Normal School, died of apoplexy on March 4, 1908. Prof. Apgar was born in Peapack, Somerset County, on August 4, 1838.

COHASSET, MASS.—John Clark, the well-known florist who has been a very efficient and satisfactory tree warden in Cohasset for two successive years, is to run again for the office. Mr. Clark had charge of the moth work for this section also.

LOUISVILLE, KY.—Phillip J. Schank, forty-nine years of age, died on Friday, February 28, of tuberculosis. He was a well-known gardener and is survived by six children.

DAVIS BROS., Morrison, Ill.

(45) Holland-Grown Longiflorum Lilies.—Will the Holland-grown longiflorum force as good as the Japanese longiflorum lilies? If so, do they produce as many blooms and how tall do they grow? G. & H. Ky.

—While we have never grown Holland bulbs of Liliun longiflorum, we have seen them at one or two places, and we think they flower just as easily and freely as the Japanese bulbs, and are much freer from disease. The habit of the longiflorum is the same all over, so that those from Holland will not be much different in height from those produced from bulbs obtained from any other country. Perhaps some grower who has raised the Holland bulbs extensively may be able to say something further in answer to this question.

(46) Carnation Rust.—The carnation leaves I send you are fair samples of the foliage in our entire house. I have tried all remedies I know of without avail. The house is well ventilated, and, of late, the foliage has been dry, except for the application of experimental remedies. Can you suggest anything other than throwing out the entire outfit—a remedy that I would like to avoid, if possible? A. W. Maine.

—The carnation leaves sent for examination show a rather bad case of rust, but this disease is not so hard on the plants that it should be necessary to throw out the stock. We would first pick off all the affected leaves, and then dust the plants over with air-slaked lime. Let this remain for several days, and on some bright sunny morning, syringe so as to wash the foliage clean. In a day or two repeat the method. Keep the house as well ventilated as possible so that a free circulation of fresh air can be secured, and in a short time the plants should grow away entirely from the disease.

A FEW GOOD THINGS YOU WANT

- Asparagus Plumosus, 2 in., \$3.00 per 100; 3 in., \$5.00 per 100.
Asparagus Sprengeri, 2 in., \$2.50 per 100; \$20.00 per 1000.

FIRST SALE IN SIGHT

Tuesday, March 17th, at noon (St. Patrick's Day), which will consist of freshly imported *ROSES, CONIFERS, RHODODENDRONS, SHRUBBERY, BULBS, ROOTS, Etc.*, at 201 Fulton St., New York. **W. ELLIOTT & SONS**

HARDY PLANT NOTES

Epimediums.

The genus *Epimedium*, generally speaking, is a race of plants not very much known, yet it comprises some of the most distinct and interesting of hardy Spring flowering border subjects that can be grown. There are numerous species and varieties, but much confusion, or ignorance, is apparent as regards getting them true to name and, in many instances, true to description. Sometimes in ordering one species or variety, even from three different sources, one will receive three different things and all under the same name, so great seems to be the confusion. But all of them are worthy of general culture and of being more extensively known and grown than they are. They commence to bloom from the middle to late Spring, earlier or later according to latitude, just before or with the appearance of the dainty frill-looking foliage. The flowers in their varied forms and varieties run through different shades of yellow, rose, lilac, red, and white; they are all extremely interesting, fascinating and pretty, and are as quaint and charming as some of the choicest orchids. They are almost too frail to use as cut flowers, but make exceedingly fine pot plants, especially when good-sized pieces are used for this work.

At the first unfolding of the foliage, which is produced on thin, wiry stems, it assumes a beautiful green tint which soon changes to delicate bronze and green; sometimes even the young foliage assumes a delicate bronze from the start, as in the case of *Epimedium rubrum*, the varietal name referring to the leaves, which, as before stated, are at first delicate light green soon turning coppery red and then a beautiful bronze, in which state they stand well into the months of Winter. In milder climates, they keep in this condition until supplanted by new foliage the following Spring. The leaf stems when mature are exceedingly wiry, and the leaflets on the stem are hard and vary in number from two to nine on a stem, making them very useful for cutting for associating with other flowers, which they will long outlast and still be good and fresh; in fact, the plant has the most durable foliage for cutting of anything I know of, and is as pretty as many of the hardy ferns for small bouquets.

The culture of these plants, if European guides are set aside, is very simple. Nearly all European writers, tell us they need sandy loam and peat, etc. These are not really necessities; the writer has grown thousands of epimediums without a single shovelful of either, but he does not deny peat would be very beneficial in conserving moisture in our dry climate and also add to the beauty and growth of the plants. Any good open rich soil will meet their requirements, and so much the better if partial shade can be afforded them. The writer knows of a bed that has been planted for ten years, which is overshadowed by a row of Norway maples; the bed itself, some 75 feet

long and 5 feet wide, is not more than 8 or 10 feet away from the base of these trees, the roots of which come up to the surface of the soil, and the epimediums share with the maples the common struggle for existence in a surprisingly marvelous manner, flowering beautifully each season and making one perfect mass of green and bronze foliage completely covering the surface of the soil. For best results, however, this is not an ideal spot; but it is mentioned simply to show how just such places can be utilized and converted from troublesome eyesores into permanent spots of grace and beauty.

These plants can be successfully grown in semi-shady places in any good herbaceous border or shrubbery, or on the rockery where the necessary shade may be afforded by some taller plant or shrub overhanging or perpendicular rock; and if moisture can be supplied during dry periods, or if they can be planted where naturally moist conditions exist, so much the better. They are all hardy and mostly natives of Japan, China, the Himalayan and Caucasian mountains. All are easily propagated by division of the short, stocky underground rhizomes, nearly every piece of which will grow. Although the rhizomes grow into dense matted masses and apparently spread in every direction, it is not advisable to divide them too close, as being small growing plants, not attaining more than 12 to 18 inches in height with us, they take too long to recover and grow into nice plants again, and look thin and weak for two or three years from too close division.

Epimedium macranthum and its varieties are the finest members of this handsome genus. As found in the American trade the flowers are pure white and the foliage abundant. *E. violaceum* has larger flowers, with violet spurs; while *E. lilaceum* is shaded lilac; *E. pinnatum* is bright yellow; *E. sulphureum*, light yellow. There are many other varieties, only varying somewhat in shades of color and habit similar to those named. *E. alpinum* is very distinct, being a dwarf grower, only reaching from 6 to 9 inches in height, with gray-crimson and yellow flowers.

Although I have strongly recommended the foliage of these plants as being useful for cutting, I would not advise their being badly stripped of all their foliage. Nature has abundantly supplied them in this respect to shelter and protect the tips of the rhizomes during the Winter. These lie very near the surface of the soil; in fact, sometimes right on the surface, and as these tips form the embryo of the leaves and flowers for the coming Spring show, they thus need the protection the foliage gives them. By cutting we rob them of their natural protection; therefore we must make amends for this by supplying them with a slight covering, and if this is in the nature of peat or well-decayed manure that can be worked in over the rhizomes, so much the better. Although they can be removed at any season of the year with good success, I think Fall or very early Spring is the proper time to move or secure them to obtain best and quickest results.

HERBERT GREENSMITH.

SHAMROCKS

IRISH: THE REAL THING: GREEN

Strong and fine. Ready now for delivery. Order at once. \$3.00 per 100; \$25.00 per 1000. Per doz. postpaid. 50cts. Extras added. Strong luscious cut sprays, for wearing or decorating, \$2.00 per 100. Also X X X Seeds as in our recent advs.

Trade and News Notes.

Business during the past week has been very quiet, and stock of all kinds is accumulating, carnations especially. The bottom has fallen out; but, taking February as a whole, the business done will equal that of last year.

B. P. Critchell and C. J. Olmer are recovering slowly from their severe illness and expect to be able to attend to business again soon.

William Pittmann and son of New Castle, Ind., were callers February 27, on their way home after spending three weeks in Florida.

The firm of Leo Weltz Sons, by mutual consent, has dissolved partnership, Fred Weltz retiring. Trebor Weltz and son Charles will continue the business under the old name; Wilmington, O., is their location. Fred and Jack will continue the nursery business.

H. H. Ritter and John Bochner of Dayton, O., were in the city, February 28, attending the Scottish Rite reunion. Mr. Fisher, also of Dayton, who is in the employ of Mr. Bochner, was a caller February 25.

William Murphy has rented his green-houses to his son and son-in-law, and will give all his time to the commission business.

Albert McCullough is in Florida on his annual fishing trip.

The Groeks are certainly slaughtering carnations on the street, but, at the present stage of the business I guess it cannot be helped.

February 29 will return in four years and we hope the nation will be in better shape by that time and more prepared.

Trade Notes.
Retailers as a whole are satisfied with business conditions and smaller profits; the growers, however, are anything but pleased with the rather poor prices obtained, considering the good quality of the stock produced. There is, however, too much of it on the market. J. J. Perry, manager of the Florists' Exchange, has his troubles these days and it is surprising and much to Mr. Perry's credit how he gets rid of surplus stock. The street pedler is more active than ever before and he plays a conspicuous part in the movement of cut flowers, especially carnations.
The Fernery has gone into the hands of receivers.
General F. C. Latrobe is now the president of the park board and G. W. Williams was appointed a new member.
On Saturday night the strong Govans-town howling team was defeated for the first time by the Baltimore Gardeners' Club team; it was a close and exciting contest. The losers furnished the oyster supper.
Wm. Fisher, Sr., for 50 years the gardener and manager of the W. H. Buckler country home grounds, died on Saturday, February 29, aged 76 years. Mr. Fisher was originally employed by Mr. Buckler's father, and lived in a pretty home on the estate. A large family and many friends mourn his loss.
C. L. S.

Carnation growers who have a surplus of young plants should advertise them in THE FLORISTS EXCHANGE.

LIMA, O.—Gilman D. Baltzell, who was employed for a number of years by the Lima Floral Company, died at his home, 828 East North street, February 17. He was born near Rockford, O., March 23, 1864. A widow, two brothers and two sisters are left to mourn his loss. Deceased was for a number of years an influential member of the Ohio City I. O. O. F. lodge.

DERRY, N. H.—William J. Kingsbury has engaged the services of William Ferguson, formerly of Groveland, Mass., to have full management of his greenhouse on Franklin street. He was the man who laid out Canobie Lake park and has done much landscape and garden work.

Nahant, Mass.
Thomas Roland does an extensive business. A choice line of pot-grown plants for Easter at present fills several large houses. A new house especially for Easter lilies was nearing completion. Mr. Roland grows about 10,000 of these. Crimson Rambler and Lady Gay roses are grown extensively. They are trained in the pots into many pleasing forms—basket shapes with tall handles and large flaring tops that completely obscure the pots seemed to have preference. It takes much care and lots of room to grow this stock. A house of bougainvilleas looked in splendid condition and will be right for Easter. A couple of houses of hydrangeas were also in promising condition for immediate blooming. Otahete oranges are grown in large numbers, as are acacias, ardisias and other hard-wooded stock. Campanula media seemed to be quite a favorite; several hundred large pots of it filled a couple of houses. Mahonia odorata makes a nice pot plant when well grown and trained into a shapely appearance. Marguerite Queen Alexandra also filled a portion of one of the greenhouses; they will be in fine condition a little later. Mr. Roland has a nice display of cyclamen; those on hand now are reserved for seed. These plants are in 10-inch pans, are only 15 months old and have over 200 well developed flowers to the plant. Besides all this stock a couple of houses are devoted to Begonia Gloire de Lorraine; about 50,000 are grown annually. A visit to the Roland place is always of interest to the growers of potted plants. Mr. Roland has a commodious automobile for the purpose of carrying his stock to the Boston stores and various markets around his vicinity.

Violets Vaughan & Sperry
 58-60 Wabash Avenue
CHICAGO, ILL.

Chicago.
News of the Week.
 The storm of Saturday and the resulting state of the streets on Sunday and Monday played havoc with the retail florists' business. Large stocks of flowers, much larger than usual, owing to the low prices existing in several lines, became factors in losses rather than profits. One or two peddlers on State street did a land office business on Sunday afternoon without police interference.
 While most of the wholesalers report a great falling off in the demand from New Orleans for flowers for the Mardi Gras festival, J. A. Budlong's usually large business was almost double that of last year for the same occasion.
 Jensen & Dekema are busy potting up rooted cuttings of W. N. Rudd's new white seedling carnation. About 8,000 plants are already potted, and about 9,000 more will be put in shape for benching. The variety, which is yet unnamed, is full of promise, and seems destined for acceptance as a very profitable commercial sort. It will go out next December.
 The A. L. Randall Company is handling a big stock of Japanese air plants. Retailers very generally are using them as decorations for window stocks of flower vases and other receptacles, as well as for trimmings.
 The Chicago Florists' Club will meet

of the next ten days, their buds at present promising a beautiful new crop. Vaughan & Sperry are getting daily shipments of forget me not and some fine sweet peas.
 H. R. Hughes, Van Buren street, is preparing to stage in his exhibition window a display typical of St. Patrick's Day, which will be made in his usual good style.
 St. Patrick's Day is already being heralded by the retailers. In many windows small pots of shamrock are already seen, and the green carnation is largely in evidence. J. H. Parren.

St. Louis.
News Notes.
 Albert T. Hey, president, and J. P. Ammann, secretary of the Illinois State Florists' Association, visited Belleville, Ill., the past week and spent a day with the florists of that city. They report an enjoyable time.
 The local growers are very busy preparing their Spring-blooming plants for the flower show which takes place next week. Among them are A. Jablonsky, Koenig Floral Company, H. Felter, George Windler, C. C. Sanders, Emil Schray and C. Young and Sons Company. These firms will also be well supplied with fine Easter stock.
 At Kuehn's place everything is upside down and it looks as if he has begun early Spring cleaning.
 The Florists' Club will hold its last meeting in the old quarters next Thursday afternoon. This will also be the annual rose show. The trustees say they have secured a new hall in a good location, and will report at this meeting. Refreshments will be served.
 The executive committee of the Horticultural Society is working hard so as to have everything in readiness for the Spring flower show, which takes place next week, Tuesday, Wednesday and Thursday. The entries are coming in satisfactorily and a successful exhibition is looked for. ST. PATRICK.

Indianapolis.
News Items.
 Indianapolis florists, thirty in number, visited the various growers at Richmond, February 26. No city in the Middle West can offer more of interest to the growers than Richmond. All Indiana hospitality, too, originated with this lot of expert hustlers, so the outcome of the visit is not a difficult hypothesis.

Sarah Hill, at Charles Knopf's, carried off the honors in the carnation line as comment upon it afterward evidenced. Several other seedlings at this place are very promising.
 Rhea Reid rose, at E. G. Hill & Company's, is now in fine form, and is much more beautiful when seen growing than at any other time. The other new roses permit all sorts of fancy dreams to haunt the minds of visitors, as there are several which will usurp the positions of those now in commerce.

Grave's ranges of roses and carnations retain their high-grade appearance, as do those of Gause & Company.
 John A. Evans, Gurney Hill, Fred. Lemon, Charles Knopf, Sidney Smith, John Grande and others helped make the occasion a memorable one.
 The State Florists' Association of Indiana held an important meeting in the State House horticultural rooms March 1.
 Tomlinson Hall market reports a quiet business. Many of the retailers are at this time able to supply their own material and the retail trade is hardly able to overcome the heavy receipts.
 Robert Ellis and wife visited Richmond last week.
 It is the intention of the Park Board to erect new propagating houses at Garfield Park.
 Visitors: Mr. Ricker, New York, and C. Sekes of A. Dietsch Company, Chicago. E. B.

SOUTH BEND, IND. James H. Oliver, the inventor of the "chilled plow," died on Monday, March 2, 1908. He was born at Roxburgh, Scotland, August 28, 1823. The plant of the concern now covers 32 acres, and 5,000 men are employed.
WACO, TEX. Miss Annie Wolfe, an associated member of the firm operating the business of the Cleveland Nursery, was married on Wednesday, March 4, to John H. Brigance. The wedding took place at the home of the bride's mother.

Club Meeting.

The members of the Gardeners and Florists' Club, two hundred strong, turned out to the great carnation night and to listen to the expert grower, W. R. Pierson of Cromwell, Conn., on Tuesday evening. Mr. Pierson gave one of the most practical talks ever heard in Boston, and during the discussion which followed he was ever ready with an answer on whatever problem a member might ask information. The discussion lasted for some time and many prominent growers took part. Among the important facts brought out Mr. Pierson classed as the best six carnations, Winsor, White Perfection, Beacon, Enchantress, White Enchantress, and Rose Pink Enchantress. During the evening M. A. Patten, president-elect of the American Carnation Society, was called upon and made some interesting remarks on how he had seen carnations grown in the West, and urged as many as possible to prepare to attend the Indianapolis convention next year.

There were on the tables the largest number of exhibits ever seen at a club meeting, some thirty vases of carnations being shown in as many varieties. The committee on these exhibits after a careful examination made the following awards:

Reports of superior merit to William Nicholson, for carnation Afterglow; to A. Roper, for carnation Bay State and to A. N. Pierson, for the cultivation of Adiantum Farleyense. Honorable mention to E. B. Beale, Springfield, for seedling carnations; John N. May, Summit, N. J., for seedling white carnation No. 20; J. D. Cockeroff, Northport, L. I., for carnation Harvard; Patten & Company, for seedlings No. 46-205 and 133; John Barr, for seedling pink carnation; Peter Fisher, for carnation Mrs. Tom Harvey; Wa-No-Ka Greenhouses, for carnations Wa-No-Ka and Climax; A. Roper, for pink seedling No. 1000; H. A. Stevens, for crimson seedling; H. A. Jahn, for carnation Lloyd and crimson seedling; Mrs. J. P. Snow, for carnation Andrew Carnegie; E. A. Wood, for seedling No. 409; Wm. Downs, for vase of Bougainvillea glabra of extra fine color; Fred. H. Kramer, for vase of new

rose Queen Beatrice, and to Jos. Fuller, for new double lobelia.

Votes of thanks were given to John Cook for vase of new rose, My Maryland; J. Flood & Company, for vase of carnation Beacon; Peter Fisher, for carnations Beacon and Winsor; A. N. Pierson, for vases of Queen Louise and White Perfection; P. J. Melia, for vases of Mrs. T. W. Lawson and Fair Maid, and to D. Finlayson, for plant of Platyclinis glumacea and vases of scabzanthus.

News Notes.

At Horticultural Hall on Saturday the lecturer was Robert Craig of Philadelphia, who gave a very able paper on "The Private Gardener." There was a fair attendance, and the various pointers on what the private gardener was and could be, as stated by the lecturer, were appreciated by all present.

R. & J. Farquhar & Company, exhibited the new rose Tausendschon before the Massachusetts Horticultural Society on Saturday and received honorable mention for the same.

The growers connected with the Music Hall market held quite an exhibition in their hall on Saturday. While no prizes were offered, the exhibits were exceedingly fine. Carnations were exhibited by A. Porter, D. Carmichael, A. Roper, John Poote, J. H. Leach, L. Smith, L. Small, John Barr, the Lewis Conservatories and A. Bateley & Son. Roses were shown by Robert Montgomery and by John McFarland, who also staged some fine lily of the valley. Violets were exhibited by Malcolm Orr, J. Cummings, G. W. Ayer and M. B. Dallachie.

Daniel Bliffe, the greenhouse heating man, has a new ventilating opening arrangement, which works on the endless cable plan, that he was showing to the growers in the Park street market on Saturday. This is a strong and simple method of opening and closing ventilators, and was highly thought of by many who examined its workings.

The attraction in W. E. Doyle's Boylston street store window the past few days has been the large vase of Killarney roses which won the silver cup at the Park street exhibition.

The A. T. Stearns Lumber Company notwithstanding the cries of hard times have more orders for greenhouse lumber than ever before at this season and their mills will be kept hustling for some time to come. They have just completed a contract with a New Jersey grower for lumber for several large modern houses.

The Waban Rose Conservatories, which have been working up a stock of their new rose White Killarney, have just sold the half interest in this variety, which will be disseminated next year, to the F. R. Pierson Company, Tarrytown, N. Y.

Among the exhibits at the Flower Market show on Saturday was a vase of carnation Lucille from Fritz Bahr, Highland Park, Ill., and staged by Welch Brothers, which stood up well considering its long journey.

A new store has been opened at 689 Boylston street in the Back Bay district by Collins & Roberts.

The Gardeners and Florists' Club intends to have its annual banquet on April 1. The date had been set for March 25, but it was found that that date conflicted with the arrangements of members who might wish to attend the American Rose Society's convention or the executive committee meeting of the S. A. F. O. H. J. W. DUNCAN.

TARRYTOWN, N. Y.—The regular monthly meeting of the Horticultural Society was held on Friday evening, February 28, 1908. The executive committee reported that the following dates had been arranged for the annual exhibitions: Summer show, June 14; Fall show, November 4, 5 and 6. An invitation was read from the Monmouth County Horticultural Society to attend its fourth annual dinner at Red Bank, N. J., on March 3. C. M. Atkinson, Irvington, N. Y., was elected an active member. Robert Scott & Son, Sharon Hill, Pa., sent their new rose Mrs. Jardine, which after a severe and critical examination was awarded a certificate of merit. "Rose Growing Under Glass" was the subject for the evening; the discussion was opened by Joe Mooney and participated in by many members. Next meeting "Cyclamens" will be discussed. L. A. MARTIN.

European Agents for THE AMERICAN CARNATION

Jacksonville, Fla.

A recent issue of the Times-Union contained an illustrated account of the plant of C. D. Mills, florist, from which we make the following extracts:

Mr. Mills, who is recognized as one of the leading and most enterprising citizens of Jacksonville, has been a resident of Duval county for 21 years. For a number of years he conducted a grocery and a nursery in the county. He removed to Jacksonville thirteen years ago and joined with Mr. Wachter in the greenhouse business, under the firm name of Mills & Wachter.

Their combined capital was \$500 and they began operations on leased ground, starting with one small greenhouse 20 x 60 feet. After about three years of partnership, Mr. Mills became the owner of the business and the property. Since that time he has built up rapidly and accumulated considerable valuable real estate, which he has greatly improved. The principal plant is located at the corner of East Eighth and Hubbard streets and covers seven lots, facing Eighth street, Hubbard street and Seventh street.

A visit to this magnificent greenhouse plant will be found intensely interesting, as it combines nine greenhouses, the violet garden, the palm house and vegetable gardens, besides the handsome new residence and beautiful grounds of Mr. Mills.

Starting with a small greenhouse, 20x60 feet, the next addition was 9x50 feet and this was followed at intervals by two greenhouses 11x60, one 11x150, one 20x140 and two 30x140. The last to be added was a magnificent rose house 33x200 feet, which is planted with roses of the best and newest varieties.

In 1906 Mr. Mills had erected a handsome residence at the corner of Eighth and Hubbard streets. The grounds surrounding the house and in front of the greenhouses on Eighth street are the most beautiful in the city, every variety of palm, evergreen, hedge and shrubbery being represented and the general effect is most pleasing to the eye.

Mr. Mills owns a nice piece of land at the corner of Oak and Osceola streets, in Riverside, on which is a greenhouse 34x100 feet. On Evergreen avenue he has another piece of property, where he raises hedge plants and shade trees. Here are also located two greenhouses in which are grown Asparagus plumosus. At the corner of Tenth and Hubbard streets, Mr. Mills owns half a block of land, on which are located his stables. He has four teams and employs an average of twenty-five men to care for his various industries, look after his offices and salesrooms, deliver flowers and plants, etc. At 36 West Forsyth are located the convenient and tastily arranged showrooms and salesrooms of Mr. Mills.

Mr. Mills is a member of Solomon Lodge, F. & A. M., Jacksonville Lodge of Elks; he is Council Commander of Palmetto Camp, W. O. W., and has twice been a delegate to the Sovereign Council, once at Chattanoga and once at Norfolk; member of Washington Lodge, P. O. S. of A., and a member of the Board of Trade for ten years, having acted on several committees of this progressive organization.

Los Angeles, Cal.

News Notes.

The third annual Spring flower show of the Pasadena Gardeners' Association will be held April 2 to 4 inclusive. So far as the writer is aware, this association of horticulturists is the only one on this coast that has made exhibitions a success financially, and to the satisfaction of its patrons. As a rule, people attend flower shows to learn about plants and flowers, their habits of growth, their requirements to be successfully grown, and their names, all of which information these men have furnished to a sufficient extent to attract the public to their efforts to advance horticulture in this marvelously congenial climate for the growth of plant life. Their success is an example of what might be done in every community where there is a desire to make homes attractive, and the place inviting. The association is composed of men of moderate means, and the admission to its shows

has never been above 25 cents; yet they have always been able to meet expenses, and have a small balance in the treasury. The organization now has 100 members and holds a monthly meeting which is helpful to those who attend in acquiring a knowledge of the great range of plant life as it is grown here in the open. Subjects too tender to be grown in that way are given little consideration. The small area of glass in this section is devoted exclusively to growing roses and carnations, with a few maidenhair ferns and a small quantity of other stock for florists' use.

Saturday evening, February 22, eleven men, florists, seedsmen and growers, met at the store room of Morris & Snow and organized a society known as the Los Angeles Florists' Club. M. W. Morris was elected chairman. He appointed E. P. Reynolds, H. N. Gage, and the writer as a committee on permanent organization, and called the next meeting for Saturday, March 7, at the store of the Redondo Floral Company, 246 South Spring street, to which all interested in horticulture around this town are invited.

P. D. B.

Rochester, N. Y.

Florists Organize.

Last week there was organized here the Commercial Florists' Association of Rochester, with officers as follows: Fred. H. Vick, president; F. J. Keller, vice-president; George B. Hart, secretary and treasurer, with a meeting place at 24 Stone street. The objects of this association are social and instructive, the first bringing wholesalers, retailers, store and greenhouse men, in closer intimacy; secondly, the promotion of the general business welfare, by the reading of papers at meetings, tending to create discussion and interest in growers' and store men's problems. Also for the purpose of mutual help and instruction to create interest in the county and national floral and horticultural shows.

Last week Salter Brothers made a basket blanket entirely of violets with boxwood edging, size 61x52 inches.

A good demand was on for special and extra American Beauty; at times not enough could be had to go around. Lily of the valley this year seems to be a failure, and quantities of it can be procured at nominal figures, bordering on the ridiculous. The same is true of bulbous stock. Carnations maintain their equanimity at \$1.50 to \$2.50 per 100, as also do roses at, according to quality, etc. \$3 to \$6 per 100. Some short stem Harrisii lilies were on sale this week.

George Bennett, carnation grower, has sold his place to his brother-in-law, and soon will be occupying his new home on the boulevard. CORKNEY.

DERBY, CONN. The greenhouses of H. M. Bradley at this place possess some features seldom found in other establishments. The location is on the trolley line as you come in from New Haven and only a short distance out from Derby. In front of the greenhouses and right beside the trolley line Mr. Bradley has built at his own expense an ornamental little octagon waiting room for the benefit of his customers and visitors to his greenhouses. The grounds between the little station house and the greenhouses are always kept attractive. The material used is changed to suit the various seasons. A large natural pool for aquatics and goldfish, surrounded by several large shade trees of much beauty, gives the place a charm not often found. At the time of our visit the waiting room was festooned with lycopodium wreathing and holly wreaths, the remains of the Christmas decoration. Hundreds of people pass daily on the trolley cars, and any display of seasonal goods is effective in making sales. J. M.

SOME SEASONABLE GREENHOUSE FACTS

You know what Greenhouse builders sometimes say about themselves is taken with a grain of salt, but when a grower who has made a marked success of his business, makes a statement about constructions and comparative advantages of houses, you are interested at once. Some of you didn't see the article on the *Wide House Question*, published in the January '07 issue of *The Exchange*, so we have reprinted it. There is undoubtedly an increasing tendency among florists and vegetable growers to build extremely wide as well as very long houses. The object of this circular is to bring to your notice the views on the *Wide House Question*, of one of the successful growers of New Jersey, whose long experience as a grower with houses of all sizes entitles his opinions to serious consideration. While we can heartily endorse all Mr. Coddington says, still we generally advise houses in widths of from 30 to 40 feet, believing that, except in special cases, they better meet the growers' requirements.

WILLIAM H. LUTTON HORTICULTURAL ARCHITECT AND BUILDER

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

The A. T. Stearns Lumber Co.

NEPONSET, Boston, Mass.

FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant
 A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 11 NEW YORK AND CHICAGO, MARCH 14, 1908 One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress
 the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price.
F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,
BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also
VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.
VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.
 We can supply, also,
WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Vaughan's Asparagus Plumosus Nanus Seed

100 seeds 60c.; 250 seeds \$1.25; 500 seeds \$2.25; 1,000 seeds \$4.00; 5,000 seeds \$19.25; 10,000 seeds \$37.50.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; P. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

CLINTON, WIS. - On Thursday, March 5, the L. L. Olds Seed Company's plant was destroyed by fire. Loss, \$50,000.

CINCINNATI, O. - The Chamber of Commerce directors have adopted resolutions against the proposed bill to "prevent adulteration and misbranding of seeds," on the ground that it would include transactions in grain.

CLEVELAND, O. - Huibert Keur, a wealthy tulip grower, has come from Hellegem, Holland, to testify in his suits against three local florists, now being heard in Judge Keeler's court. Keur is suing Henry Eickhoff, Frank E. Bowers, and Emil Heidenblau for sums totalling \$800, alleging he is unpaid for hyacinth, tulip and gladiolus bulbs shipped from his establishment.

BALTIMORE, MD. - Handlers of seed in Maryland are much exercised over the bill introduced into the Legislature by Mr. Duvall of Anne Arundel County, which it is pointed out, will practically prohibit the sale of seed in this State. The bill provides that the amount of germination and amount of impurities contained in a lot of seed must be guaranteed by the seller.

IMPORTS OF SEEDS, ETC., March 3. - G. W. Sheldon & Company, two bags seeds; W. Elliott & Sons, 10 cases plants; O. J. Smith, 30 cases plants; P. Ouyverkerk, 168 cases trees; Tice & Lynch, 11 cases plants; McHutchison & Company, 106 packages plants, six cases flower roots; C. B. Richard & Company, two cases plants; J. M. Thornburn & Company, six cases plants, Vaughan's Seed Store, seven cases plants; T. C. Pollock, 15 cases plants; G. W. Sheldon & Company, 56 cases plants; F. B. Vandegrift & Company, 27 packages seed, etc.; Maltus & Ware, 272 packages plants, March 4, Maltus & Ware, three cases bulbs; Vaughan's Seed Store, four cases bulbs, March 5, - J. E. Noll & Company, one barrel seed; Vaughan's Seed Store, one case seed, March 6, Peter Henderson & Company, four packages plants; O. G. Hempstead & Company, five packages plants, March 7, and S. Maltus & Ware, one case trees; S. D. Woodruff & Sons, two packages seed; H. E. Darrow, five packages seed, etc.; C. C. Abel & Company, 31 cases plants; McHutchison & Company, four cases plants; Kenney & Moon, one case plants; H. E. Darrow, 35 cases plants; F. B. Vandegrift & Company, five cases plants; C. B. Richard & Company, five cases plants, March 9, - H. E. Darrow, 40 packages seed; L. J. Spencer, 18 packages plants; D. W. Barrett, one package plants.

Seed Trade Notes.

A most decided and strong rush of orders started with the incoming of March, and every day since has seen a steadily gathering momentum of business in every branch of the seed trade. At this early season the weather always has a great deal to do with the volume of each day's business, especially with the cash over-the-counter sales. As regards the counter trade, last week was really the first time this season that what could be called active business materialized; the few pleasant days starting the market gardeners and other early planters in goodly numbers to the seed stores. With reference to the mail trade, it does not appear to be an easy matter to estimate its volume as compared with other years; several large mail order seedsmen that I have seen in regard to this matter, are not at all a unit of opinion, some claiming much increased orders, others the contrary. On the whole, I rather feel that our recent business panic has hurt the mail business for this season, and if the final figures show even an average trade done, we may consider ourselves indeed very fortunate. If we can only now have some good weather, even if the Spring is somewhat late, a very active volume of trade is assured.

I have several times lately called attention to the fact that the high rates for many standard varieties of vegetable seeds have tempted the growers to encroach heavily upon their seed stocks. The natural result of this will be that high prices for another season will be sure to rule. An average seed yield this Summer will not make rates much if any less than they are now; if, however, we should obtain one of those enormous seed yields that a few times in the past have reduced prices to the lowest ebb, we might overtake the demand, so to speak; but unless some such abnormal large seed yield should result from the 1908 crop, both here and in Europe, you will see high prices again next year, and probably longer.

At last the radical shortages in the sweet corn list are making themselves severely felt; the first thing a customer asks for, be he a dealer or planter, is sweet corn, and usually for Stowell's Evergreen, or Country Gentleman, or both. Either of these varieties could be sold, I am sure, at \$10 or \$12 a bushel. The demand for both of them would seem to be unlimited. The present market for these two favorite varieties is from \$6 to \$7 per bushel, if obtainable. The early sorts of sweet corn are not quite so scarce, and at \$3.50 to \$5 per bushel such sorts as Early Crosby, Early Cory, Early Minnesota, and Potter's Excelsior can still be obtained.

SEED CORN IN OHIO.—In all probability high-grade seed corn is scarcer in Ohio this season than for many years. The principal cause for this is of course the cold, wet growing season of last year, together with the cool, cloudy Fall. Had we had a different October and November, even, corn which did mature, or came close to maturity, would now be in very different seed condition. As matters stand great care must needs be exercised or 1908 will find Ohio with one of the poorest corn crops in years. Very many growers all over Ohio, and particularly in the northern half of the State, will have to buy their seed corn. Such growers are confronted with a serious question, namely: Will this purchased seed prove adapted to the new locality? The Ohio Experiment Station is offering some suggestions along these lines in Circular 74, which may be had, including instructions and record blanks for conducting germination test, by addressing Ohio Agricultural Experiment Station, Wooster, Ohio.

CLEVELAND, O.—The Home Gardening Association began last week its distribution of seeds in every public and parochial school in Cleveland. Vegetable as well as flower seeds are furnished by the association, at the uniform rate of a cent a package. Two sets of circulars have been sent out, one to the pupils and one to the principals and teachers; also a list of seeds. Last year—the record year in the history of the association—the school children of Cleveland bought 273,000 packets of seeds and 90,000 bulbs. It is hoped this record will be beaten this Spring.

The Wholesale Seedsmen's League and Plant Nomenclature.

A special meeting of the directors of the League, F. W. Bruggerhof presiding, was held February 18, consequent on the following communication received from Messrs. Dreer and Burpee:

"Philadelphia, Feb. 8, 1908.
"Mr. Burnet Landreth, Sec. Wholesale Seedsmen's League,
"Bristol, Pa.

"Dear Sir:—Through a misunderstanding, an unfortunate difference of opinion arose between our two houses as to the cataloguing of the 'Fordhook Bush Lima Beans,' which has been amicably adjusted; but, to prevent any confusion or difficulties of this kind in the future among the seed trade, both houses feel that the executive committee of your League should take up this question immediately, and endeavor to formulate a plan which shall control the naming, cataloguing and selling new varieties of seed, so that the proprietary rights of the original discoverer or introducer of such new varieties shall be recognized and protected in the best interests of the seed trade.

"Yours very truly,
"W. Atlee Burpee & Co.
"Henry A. Dreer, Inc."

At this special meeting there were passed the following resolutions:

"WHEREAS, The Society of American Florists as long ago as 1891 accepted the report of the Committee of Nomenclature on 'The Right to Pre-empt the Names of New Plants,' worded as follows:

"In the case of new species of plants, the first published botanical name takes precedence, but this publication must be technical and made in a recognized botanical or horticultural periodical or work, and not in a trade catalogue. In the case of florists' varieties, or garden varieties as they are more commonly termed, a botanical description is unnecessary, but the plant should be pointedly described, and the first authenticated name published, either in the way of reading matter or as an advertisement in a general horticultural or floral magazine or widely circulated trade catalogue, or officially noted when the plant is exhibited at some prominent horticultural exhibition, or before some regularly organized public body of horticulturists should be recognized as the true varietal name, and no matter should the same variety originate elsewhere, the originator in the second case must not disseminate his stock under any other than the original name.

"Recognizing the fact that the seed trade of America should have an established custom similar to that adopted by their kindred association, we, the board of directors of the Wholesale Seedsmen's League, at a meeting held in New York, February 18, 1908, unanimously adopt the following motions:

"Resolved, That as the business of growing, selling and distributing seeds has become such an important pursuit, it now seems absolutely necessary that those of us having the interests of the business at heart should recommend our fellow seedsmen to respect the energies and progressive methods of each other; and it is further

"Resolved, That the originator, discoverer, or introducer of a new variety of seed, grain or plant has the sole right of naming said variety, and that this name should be the one under which this variety is to be known in the trade thereafter, and the name not altered (except that it may be optional to leave off the name of the individual or firm, when used as a prefix) or changed in any way until it is absolutely demonstrated by continued selection the variety has been so improved or changed as to warrant its being given a new name.

"Resolved, That where a seedsmen spends time and money in search of new and distinct varieties of seeds, that it is his right to name any variety he may discover which has merit and which has not heretofore been catalogued or offered by the American seed trade.

"Resolved, That we, the board of directors of the Wholesale Seedsmen's League, hereby express our strong disapproval of the practice that has occasionally obtained with some dealers of offering under new names such varieties of seeds, or plants, which should be known only under the names given to them by their introducers; which original names may be fairly considered as trade marks, and the property of the originator or introducer.

"Resolved, That we hereby pledge the influence and the support of the Wholesale Seedsmen's League to the end that,

when introducers of newly discovered or improved varieties of seeds shall have disseminated the same under special names, they should be protected against unwarranted and unfair competition through the offering of these novelties by others under other names than those given to them by the originators or introducers.

"Resolved, That the secretary of the League be instructed to take up this subject with the American Seed Trade Association, with a view to having said association pass suitable resolutions at the next annual meeting in June, to the effect that every new variety of seeds, either vegetable, flower or grain, that may be introduced and catalogued hereafter by an American seedsmen should be registered under its proper name, with a full description and source of origin, with the secretary of either the Wholesale Seedsmen's League or the American Seed Trade Association, as may be decided upon after conference of committees to be appointed by the presidents of the two organizations, said joint committee being authorized to fix the amount of the nominal charge to be made to cover cost of such registration and attendant expenses. It is recommended that either said joint committee, or a special committee, be made a standing committee to consider all questions in dispute as to the naming of varieties, and if impossible to adjust same amicably between the disputants, to submit reports to the board of directors of both organizations.

"Resolved, That copies of these resolutions be sent to each member of the Wholesale Seedsmen's League, and that a sufficient number of copies be sent to the secretary of the American Seed Trade Association for mailing to each member thereof.

"Such distribution of copies of these resolutions to be accompanied with an explanation from the secretary that we seek the co-operation of all honorable houses, in the interests of all, in an earnest endeavor to fix firmly the usages of the American seed trade upon the highest plane of business ethics."

The secretary was instructed to mail a copy of this action to all members of the League, and to other seedsmen in close affiliation. BURNET LANDRETH, Secretary of the League.

CATALOGUES RECEIVED.

WOOD BROTHERS, Fishkill, N. Y.—Trade List of Plants and Rooted Cuttings—January to May 1, 1908.

WILLIAM SWAYNE, Kennett Square, Pa.—Descriptive Price List of new and standard varieties of Carnations, Chrysanthemums, etc.

JOHN A. BRUCE & COMPANY, Hamilton, Ont.—Illustrated Catalogue of Vegetable, Field and Flower Seeds, Bulbs, Plants, Shrubs, etc.

WILLIAM F. TURNER & COMPANY, New Bedford, Mass.—Illustrated Catalogue of Dahlias. A comprehensive collection is enumerated.

T. C. THURLOW & COMPANY, West Newbury, Mass.—Catalogue of Trees, Shrubs, Vines, Herbaceous Plants, Roses, Fruit Trees and Small Fruits.

HIERLOFFSON'S, Christiania, Norway.—Illustrated Catalogue of Vegetable and Flower Seeds, Plants, Implements, etc. Printed in the Norwegian language.

ROBERT C. REEVES COMPANY, New York.—Descriptive Catalogue of Agricultural and Horticultural Implements and Machinery, Garden, Field and Flower Seeds, Fertilizers, etc. Illustrated.

ELM CITY NURSERY COMPANY, New Haven, Conn.—Catalogue of General Nursery Stock, Hardy Herbaceous Plants, Roses, Fruit Trees, Small Fruits, etc. On the front cover is a photograph of "The New Hardy Shrub, Hydrangea Grandiflora Alba." The name is given in the catalogue as Hydrangea arborescens var. grandiflora alba, both of which, according to the latest "decelion," are wrong.

W. E. BARRETT COMPANY, Providence, R. I.—Sixtieth Annual Catalogue of Seeds, Implements, etc., with lists of Novelties and Specialties. The firm says: "As a seed year, 1907 was not a success generally, extreme dry weather in some sections, and excessive wet weather in others, causing short crops of many varieties of peas and beans; vine seeds, radishes and beets also suffering; but the worst feature we shall have to contend with is sweet corn. This will be very scarce, particularly the later varieties."

DREER'S HARDY PERENNIALS

Largest assortment of desirable varieties. Plants of proper size to give best immediate results.

For complete list of varieties see our current wholesale list.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns for the season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Penna.

California Plant Notes.

An attractive plant in bloom here at the present time, March 1, is *Senecio Jacquinii*. The flowers so nearly resemble those of the dandelion in size, in color, and construction, that if cut without stems and laid side by side it would be a difficult matter to distinguish the one from the other. The plant is four feet high with a top three feet in diameter. The stem is woody, three inches diameter at the base. The flowers are borne in loose umbels in great profusion. The family *Passifloraceae* affords us some of our most vigorous vines and profuse bloomers. When young plants are first set out a black caterpillar attacks

them, and if not picked off soon defoliates and debilitates them. After the first year they seem to be immune from the ravages of this pest, which appears to be the only enemy either fungoid or insect that preys upon the plants.

Three *passifloras* which have come under my observation are perpetual bloomers, a rare characteristic of plant life as it grows here. *Passiflora cinnabarina* has bright glaucous foliage; flowers are a bright scarlet, borne in the axils of the leaves every day of the year. It has not, so far as the writer is aware, set any seed in this locality. *Tacsonia mixta* is a wonderfully vigorous vine with large dark pink flowers and luxur-

iant foliage of light green color. It produces fruit, oval, an inch or slightly larger, containing a pleasant seedy pulp, so sparingly as to be a novelty. *Passiflora quadrangularis*, with large, entire foliage, large light colored, fragrant flowers, is seldom seen, yet deserves a place in the collection of plants on every large estate. The plant I know sets no fruit, and completes the trio of perpetual blooming *passifloras* that has come under my observation here.

Tacsonia mollissima is also a vigorous grower with deeply divided foliage and light pink flowers, but fruits so abundantly as to exhaust the energies of the vine for a season. The fruit is 3 to 4

2 Duane Street, New York

inches long, an inch in diameter, and yellow in color when ripe. It also contains a pulp agreeable to the taste, but one fruit at one time is sufficient to satisfy most people. The appearance and consistency of the edible part of the fruit of these two *tacsonias* is nearly like that of the May apple, *Pedophyllum peltatum*, of the East. P. D. B.

Amygdalus Nana Pumila.

Many a garden would lose its charm in early Spring were it not represented by one or more plants of the flowering almond, the pretty bush gardeners know so well. The two sorts, the white and the pink, bear their blossoms in great profusion, and can always be depended upon for a fine display. Very many of the early flowering shrubs are of light color, in the midst of which the pink-flowered flowering almond finds a welcome place, both for its own sake and for the better effect of the whole when the pink flowers are introduced among them. Our picture represents a pink one; and the bush itself shows well the usual habit of growth of the flowering almond.

All of the many kindred double-flowering shrubs, the peach, the plum, as well as the almond, are invaluable for the shrubbery in Spring. All have a pleasing habit of growth and of flowering. The way the almond displays its blossoms is well shown in the illustration, and fits it well for planting singly as it does for mingling with other shrubs in a collection.

Magnolia Grandiflora.

It is interesting to read in the New York notes of your correspondent of the beautiful specimen of Magnolia grandiflora growing in Brooklyn, N. Y. A tree of it 30 feet high, as he says this is, is a fine one for so far north, and it goes far to demonstrate that this most desirable evergreen will endure a good deal of cold when the locality suits it in other respects.

In Philadelphia there have been specimens here and there which have grown to be large trees. When in a partly sheltered place and the Winters immediately succeeding its planting are not unduly severe so that good root hold is acquired, this magnolia will live almost anywhere about Philadelphia. This is especially true of those planted near large bodies of water. Near the Delaware River, at Tacony, Philadelphia, in the yard of a veteran of the Civil War, is a very nice tree, which he got from the South after the close of the war, and this tree rarely gets injured even in its foliage.

When in an entirely open situation the sun, together with high, cold winds, is apt to injure the exposed leaves, hence protection from both is desirable. But when near a dwelling, where winds are not apt to catch it, protection additional to that of the dwelling is sometimes not necessary.

Before Winter sets in, should the ground be dry or likely to become so, give a thorough soaking of the soil surrounding the magnolia. It will get through the Winter much better when the ground is wet in Winter than when it is dry.

As this magnolia, being evergreen, does far better transplanted from a pot than from the open ground, florists would do well to grow a lot of them in pots, as there is then no risk in their transplanting. Seeds kept moist through the Winter and sown in a greenhouse in February or March are sure to grow.

Catalpas for Shade and Ornament.

The efforts of those interested in forestry matters to make clear the value of the Catalpa speciosa for timber are bearing good fruit, for nurserymen and others who sell trees are now anxious to raise seedlings to meet the demand already existing or anticipated. There is no question that C. speciosa is the most valuable of all for forestry planting. The wood of C. bignonioides may be just as good, but the tree does not grow as straight and tall as the other, hence the same length of timber cannot be obtained from it. Further than this C. speciosa is harder than the other, fitting it for planting where the other one would not endure the climate, such as in the Northwest.

As an ornamental tree Catalpa bignonioides is the better one. Instead of growing tall it becomes more spreading, and when in this shape it displays its large panicles of flowers to much greater advantage than does the taller C. speciosa.

The globe-headed one called, improperly, C. Bungei, is a variety of bignonioides. It is grafted on tall stems of one of the others, when it makes a bushy, round-headed growth which fits it well for planting alongside pathways and similar positions. It never flowers that anyone has made record of. When grown from cuttings,

as it easily can be, it forms a low, bushy growth, which fits it for positions calling for such a shrub.

Catalpa Kämpferi is an upright growing small tree. In its style of growth as we see it here it resembles C. speciosa, making a pyramidal outline rather than a rounded one. It is a nice ornamental tree, and interesting in a collection, but is not the equal of C. speciosa as a forest tree nor of C. bignonioides as an ornamental tree.

There are very few of them in cultivation hereabouts. They must be more abundantly planted in some localities, as catalpa experts claim that much of the seed sold for pure C. speciosa is from trees hybrids between it and the latter named one.

Mentioning the propagation of the dwarf catalpa from cuttings, it may be added that all varieties may be increased in the same way, speciosa, bignonioides and Kämpferi. Shoots cut now and planted in nursery rows in early Spring would make good roots by Autumn.

Peaches for a Small Garden.

It is a fact that notwithstanding the many new varieties of peaches continually brought to notice, the older kinds, those of a half century or more of trial, are still the ones most often called for.

Here is a list consisting of good old sorts that are still the best sellers of all, named very nearly in the

weeping form, (C. pubescens Ehrh.) the white. In some of the Southern States, Virginia, and North Carolina, for example, it is found in their mountains as in many parts of some Northern States, and trees from such localities are tried to grow in any ordinary section North.

Propagation of Birches.

The various species of birch are all increased from seeds, either sown in Autumn or in early Spring. The varieties, such as the cut-leaved weeping, the Youngi pendula, pyramidalis and other forms, all belonging to the species alba, are increased by budding, layering, inarching or grafting, chiefly by budding, and as the common alba is easily raised from seeds and as the proper stock to use, there is little difficulty in procuring a supply of the varieties when called for.

Of all the birches more plants are sold of the cut-leaved weeping than of all others when purchases are of a plant or two of some one kind. When hundreds are wanted, it is another thing. Then the rubra, the papyracea, the alba or some other may be the one called for, the particular one depending on the purpose of the planting. The red, ragged bark of the rubra is effective; then the white bark of the alba, the papyracea and populifolia gives the effect often desired, while the yellow bark of lutea and the black bark of lenta are effective in certain positions.

Amygdalus nana pumila, Flowering Almond

order of their ripening: Troth's Early, Early York, Mt. Rose, Oldmixon, Stump the World, Smoek, Crawford's Late and Ward's Late. These are good, whether for eating out of hand or for preserving. All are free-stones, including Smoek, but it does not part from its stone as freely as some, though not a clingstone.

The peach most abundant in our markets of late years is Elberta. This is a good peach, a good cropper and sure bearer, but it lacks the high flavor many other kinds possess, and probably it would satisfy the average person less than any other peach would.

Spring is recognized as the proper time to set peach trees; and another proper thing to do is to give them a very close pruning at the time.

Hardiness of the Varieties of Cornus Florida.

The writer is asked whether the weeping dogwood, Cornus florida pendula, having been found wild in Maryland in the first place, is considered hardy for general planting. Most assuredly it is. It has been planted alongside the common dogwood everywhere, and never a complaint of any lack of hardiness that I know of has been entered against it. The original home of the weeping dogwood was in the vicinity of Baltimore, Md. Its home could have been even farther South than it was, and it would still have been able to take a position wherever the common form grows, as has been proved in the case of the pink flowered variety, which was found wild in Virginia, and was introduced from there by the late firm of Parsons & Sons Company. This plant is now to be seen in nearly all collections where the common dogwood is found and, as in the case of the

When it comes to white-barked birches the cut-leaved weeping lends all, because of its white bark, drooping branchlets and pretty cut-leaved foliage. When the drooping habit is not considered the papyracea, or paper birch, called also canoe birch, excels in its beauty in the Winter season. It has the whitest bark of all birches, better even than the famed alba, the white birch of Europe, and much better than another of our native sorts, the poplar birch. The paper birch, which is the one of our Eastern States, is rather slower in taking on its white colored bark than the alba and other white ones, but it is preferable in the end. As a shade tree it is well fitted, having larger leaves than many other birches, and forming a well-branched tree. Leaving out the weeping and other varieties of white birch, the best of the white barked kinds may be listed in the following order: papyracea, alba, populifolia. Alba is oftener asked for by customers because of being better known; in spite of this there will be no mistake in stocking up with the papyracea, the canoe birch.

JOSEPH MELLIAN.

The New York College of Agriculture, Department of Plant Pathology, is now undertaking a careful and exhaustive study of the hollyhock disease. H. H. Whetzel, assistant professor in charge of this, asks for contributions of seeds or cuttings of any hollyhocks, hibiscuses or mallows for use in these trials. He does not only to determine what spray mixtures are most efficient, but to ascertain if any varieties are immune to the disease.

Seed Trade Report—Continued

A Great Seedsman.

Under this heading the Country Gentleman of March 5, 1908, publishes an account of the career of W. Atlee Burpee, the world-famous seedsman of Philadelphia, Pa. (with accompanying portrait), from which we make the following extracts, and which, we feel sure, will be read with interest by our subscribers:

"W. Atlee Burpee was born at Sheffield, N. E., April 5, 1858, but was predestined to be a Philadelphian, his father having married the daughter of his instructor in medicine, Dr. Washington L. Atlee of Philadelphia, under promise that within five years he would move to that city. He was also predestined to be a physician, but objected to that part of the program, and at the age of 18 opened, in connection with G. S. Benson, Jr., a little store at 223 Church street, dealing chiefly in fancy pigeons and poultry, Mr. Burpee having already acquired a reputation as a breeder and writer on that subject. The firm lost \$3,500 the first year, and was glad to take in a third partner who is still a close personal friend of Mr. Burpee, but whose ideas in business differed, and in April, 1878, Mr. Burpee withdrew from the firm and started by himself as 'W. Atlee Burpee & Co.' dealing in seeds as well as birds and dogs. The second year of the first partnership just paid expenses. 'The third year by myself,' Mr. Burpee says, 'I netted a profit of \$2,700. In 1882 the little shop in Church street was too small, and I moved to our present location. I remember that my father, looking over the building I had just hired, thought that we could never have sufficient trade to occupy such a large establishment. The trade, however, increased, so that we soon had to hire storage outside, and in 1898, having previously bought the property, we pulled down the old building and erected the present modern seven-story warehouse, while since then we have bought additional property to the south on York avenue and one on Fifth street.' Mr. Burpee does not bragging about the volume of his present business, but of course everybody knows that it is colossal. On what may be called the professional, and infinitely the more interesting, side of his calling he tells us this:

"Until 1888 the field tests of our seeds were conducted at the eastern end of Long Island by our old friend, E. S. Miller, but he moved away and it became necessary to procure our own farm. We then bought the first Fordhook, which, with the several purchases since made, constitute the trial grounds, which, ever since 1888, have been under the superintendence of E. D. Darlington. Years ago, however, we recognized the fact that in a soil and climate like that of Bucks County, Pa., it was impossible every year to get satisfactory trials of the cucurbitaceae. We, therefore, arranged for these trials to be made in southern New Jersey, and, after conducting them on hired land, several years ago purchased a farm near Swedesboro, where we have suitable light, sandy soil, not only for such trials but also for the growing of special varieties of tomatoes, egg plants, peppers and certain flower seeds.

"Mr. Burpee is a life member of the Société Nationale Horticulture de France, the Royal Horticultural Society of England, and has been for some years vice-president of the National Sweet Pea Society of England. In 1893 in Chicago, he was elected president of the American Seed Trade Association, presiding at the next annual meeting at Toronto, and has been a director of the Wholesale Seedsmen's League ever since its foundation. His prominence is due, not only to the high excellence of his seeds and the immense quantity that he sells, but also—again a professional rather than a trade matter—to the fact that he has undoubtedly introduced many more new and improved varieties of permanent value than any other dealer. The list includes at least 20 sweet peas, more than a dozen melons, and a number of vegetables of many different families. The story shows what a man of ability, courage and perseverance can accomplish, when he finds a pursuit that just satisfies his tastes."

COMMERCIAL MELON GROWING.—Seedsmen and others will find much of interest concerning this subject in bulletin 123, just issued by the Purdue University Agricultural Experiment Station, Lafayette, Ind. Varieties are discussed, as well as cultural requirements, harvesting, marketing, insects and diseases. The bulletin is illustrated.

THIS IS A REMINDER TO
ADVERTISERS THAT OUR

Nineteenth Annual Spring Number

WILL BE DELIVERED TO OUR
SUBSCRIBERS THROUGHOUT
THE ENTIRE COUNTRY ON

Saturday,
March 28, 1908

The Crop Reporting Board of the Bureau of Statistics finds, from reports of correspondents and agents of the bureau, that the quantity of corn in farmers' hands on March 1, 1908, is estimated as 37.1 per cent., equivalent to 962,429,000 bushels, of last year's crop, as compared with 44.3 per cent., 1,298,000,000 bushels, of the 1906 crop on hand March 1, 1907. It is estimated that about 18 per cent. of the crop will be shipped out of countries where grown, as compared with 23.2 per cent. of the 1906 crop.

THE GERMINATION OF VEGETABLE SEEDS.—The Department of Agriculture, Bureau of Plant Industry, Washington, D. C., has distributed a bulletin (131 part I) on this subject, prepared by Edgar Brown, Botanist in charge of Seed Laboratory and Willard L. Goss, assistant, Seed Laboratory. The bulletin states, among other things:

During the Spring of 1907 there were purchased in the States of Maine, Vermont, Massachusetts, Kentucky, Wisconsin, North Dakota, Kansas, and Colorado, 2,778 packets of so-called "commission" vegetable seeds. These were put up by 27 seedsmen and included seeds of 26 kinds of vegetables. The germination of many kinds of seed was surprisingly low. The average germination of the 135 samples of carrot seed tested was 45.4 per cent.; of the 141 samples of onion seed, 45 per cent.; of the 331 samples of cabbage seed, 40.8 per cent.; of the 47 samples of pepper seed, 33.7 per cent.; of the 35 samples of salsify seed, 27 per cent.; while of the 69 samples of parsnip seed, only 20.8 per cent. germinated.

The seed from certain packeting houses was especially poor. Of 121 packets put up by one seedsman, the average germination was only 37.3 per cent., and of 241 packets put up by another the average germination was 41.3 per cent. In many cases wide differences in germination were found between different packets from the same seedsman.

Of 209 packets from 21 of the 27 packeting houses referred to, none germinated more than 10 per cent., while all the seed in 62 packets from 13 firms failed to germinate.

In view of some criticisms of the quality of the seeds sent out in the Congressional seed distribution, a table is presented, showing the average germination of the various kinds of commission seeds tested in comparison with the average germination of the same kinds of seeds distributed by the Department of Agriculture on Congressional orders during the past six years.

In all cases the average germination of the "commission" seeds tested was lower than that of those sent out in the

Announcement of Our 19th Annual Spring Number

The coming of Spring never fails to give added impulse to horticultural and floricultural industries, and, to get your specialties before the buyer at the psychological moment when he is all ready and fully prepared to make his purchases for the season, is the opportunity we are affording you by bringing out this Spring Number on Saturday March 28. **Timeliness is an all important feature in advertising.**

The Business Paper for Business Men

OUR SPRING NUMBERS have earned the reputation of bringing unequalled profitable results to advertisers, as well as of being most interesting and instructive to the readers.

No matter to which particular branch of the business your line of goods appeals, an advertisement in this Spring Trade issue will bring gratifying results. **The opportunity is here; why not grasp it?**

To be in good time, copy for your advertisement must reach us by or before 12 o'clock, noon, of Wednesday, March 25; if received earlier, we can give it still better display.

Publishers THE FLORISTS' EXCHANGE

Short Address: P. O. BOX 1697, NEW YORK

Congressional seed distribution, varying from 4.5 per cent. for Lima beans to 56.2 per cent. for parsnips.

The bulletin adds: "That many firms are selling vegetable seeds not only of a low average quality but often entirely worthless makes it evident that some sort of protection should be afforded the purchaser by a guaranty of quality given by the seedsman."

European Notes.

To-day being the last of February we have the very latest sample of weather and are fairly snowed under. In some of our northeasterly districts fully 12 inches rest dry and frozen on the ground. As bitterly cold Winters are predicted this will effectually shelter seeds that are already sown and check trade, which was already sufficiently quiet. *Nil desperandum.*

EUROPEAN SEEDS.

FRENCH SEED TRADE REPORT.—The season for the wholesale trade will soon be over and we are now busy preparing small orders that come in, and some from those who are running short of a few articles. Retail trade is now starting in.

Last Winter was not very severe here and apart from a few days' frost, which did any amount of good to the soil, putting to death a lot of vermin, etc., we have had a comparatively mild although damp temperature.

The wholesale trade had a pretty good season in France. I am sorry to hear that such was not the case in England and that a good many wholesale firms over there are complaining about short sales. Here prices have been too low, so that we hardly find it possible to make a decent profit on any article. Carrots, lettuces, cucumbers and beans sold pretty well. Turnips, Swedes and cabbages were expected to fetch very high prices owing to short crops and failure of plants for 1908 crop, but they maintained decent values. I think the reason of this is that, owing to the great drought we had in the sowing season, these seeds could not be sown at all, the result being that most of them were left in the hands of the retail trade, who had bought largely for fear the prices would advance within a short time. As only a few plants were put in for 1908 crop, these seeds should fetch a big price next season, if the weather proves favorable during sowing time.

Peas also sold very well and some

5000 CANNAS

LOUISIANA, beautiful dark red, orchid-flowering, strong roots, with 2 and 3 eyes, \$6.00 per 100; 200 for \$10.00. 20,000 DWARF BOXWOOD for borders.

10,000 MAHONIA AQUIFOLIA, 3 year old.

Also fine lot of small shrubs; a real occasion for landscape gardeners.

For particulars write to
THE CEDAR HILL GARDENS
SEA CLIFF, L. I., N. Y.

CANNAS

Two great gold medal cannas, King Humbert, 8c.; Wm. Kasting, 5c.; Brandywine, most magnificent bronze-leaved bedder, 3c. Egandale, 2½c. Crimson Bedder, a superb canna, 2c. Fine dormant roots, Cash.

N. A. CORLIN, Elberon, N. J.

varieties, such as Alaska, latterly became very scarce and reached a high figure such as we were not used to pay for a long time back. Radishes started at good paying prices, but owing to large quantities held over and to good crops in some countries values diminished somewhat.

The most prominent feature of the season was the repeated dropping in prices of onion and leek seeds. On account of short crops, these started in very high last September and October and we could not see any reason why the high prices should not be maintained. However, the demand was very small indeed, and suddenly, some weeks ago, values fell enormously. On the other hand, leek seeds were mostly harvested in wet weather, so that they look very bad indeed, and the growth is far from being satisfactory. I have lately heard of large stocks of leek seeds being sent back to the growers here from foreign wholesale firms, on account of bad growth.

In my next article I hope to be able to report on biennial plants and give an opinion of what we may expect next harvest.

FRENCH SEEDS.

C. 362, Week's Work, The 350, TORONTO, ONT. That the city may go out of the flower and plant growing business, when the Parks Department is reorganized is one of the suggestions at the City Hall. The idea is that the city should buy all that it needs for the parks. But that, in these days of municipal ownership, such a proposition would be entertained is doubted by other people. The probability is that the competition of the city for prizes at the exhibition will be stopped.

Commercial Price Violet Culture \$1.50. The Florists' Exchange, 2 to 8 Duane St., N. Y. THE TRADE ONLY - When Writing Please Mention THE FLORISTS' EXCHANGE. A FEW GOOD THINGS YOU WANT. Cash with order. J. P. CANNATA, MT. FREEDOM, N. J.

Plant for Name.—H. B. S., New York.—Probably a form of *Lonicera japonica*.

(47) Growing Tobacco for Fumigating.—Could I grow tobacco for fumigating or steeping in water for syringing roses to keep off bugs, and what process would it have to go through? D. F.

—The process of curing tobacco is such a tedious one that it would be very costly if grown purposely for fumigating, and we would not recommend it; tobacco stems and tobacco preparations are too cheap.

(48) Stocks for Decoration Day.—I have some stocks with six to eight leaves, in 2-inch pots, and would like to get the crop in bloom for Decoration Day, May 30. When should they be planted in the bench in the greenhouse, and about what temperature would they require? J. G.

—Plant the stocks on the benches the latter part of this month or very early in April. Allow a temperature of 50 degrees at night until the flower shoots begin to show; then increase the temperature to 54 or 56 degrees and feed with a little weak liquid manure once every five or six days.

(49) Sweet Potatoes.—What is the best way to grow sweet potatoes, time to plant, how and when? D. F.

—Bailey's Cyclopaedia suggests the following method: "Tubers of the last season's crop are 'bedded' for this purpose; that is, an outdoor hotbed is constructed in which the tubers are placed in a single layer, close together, and covered with several inches of soil early in Spring. In a few weeks the latent buds of the tubers, under the stimulus of the heat from the fermenting manure, will have sprouted, and by the time all danger from frost has passed, a dense growth of 'draws' or 'slips' will cover the bed. These are removed from the tubers, set by hand in the field in rows four feet apart—the plants eighteen inches, generally, in the row. The size of the bedded tubers does not affect the crop."

(50) Trouble with Mint.—I send you a sprig of mint which appears to be diseased. Kindly tell me what the trouble is. A. L. S., New York.

—The mint appears to be covered with red spider, which pest has been allowed to multiply to an enormous degree through wrong treatment of the plants. Keep the mint rather on the wet than the dry side; syringe freely on bright mornings and give plenty of air whenever the weather allows. It will also be a good plan to cut away all badly affected stems; new growth will start right away.

WE ARE NOT HEADQUARTERS for general nursery stock. We have some SPECIAL Stock at SPECIAL PRICES Berberis Thunbergii, Viburnum Dentatum, Etc. Write to-day LITTLEFIELD & WYMAN, North Abington, Mass.

Alpine and Rock Plants Gentians, Acaulls and Verna, Edelweiss and ten other plants, \$2.00, including postage. Send me your wants and I will give you price. ENGLISH HOME OF ALPINE PLANTS South Pool, Kingsbridge, Devon, England

ROSES

American Rose Society.

Special Prizes.

The large list of special prizes betokens a most creditable interest in the coming rose show. August Poehlmann, Morlon Grove, Ill. is manager; George Asmus, 879 West Madison street, Chicago, Ill., assistant manager, and will be in charge of exhibits.

Send an application for entry to T. E. Waters, secretary of the Chicago Florists' Club, or file with Benjamin Hammond, secretary of the American Rose Society.

It is urgently desired that all intending exhibitors will let the committee know early what they will send. Last year at Washington, D. C., exhibitors delayed doing this until the very last day in the afternoon, and the result was that the beautiful show which ensued, was really not known until it was on the ground, and this rush made it difficult to handle.

Secretary American Rose Society. Fishkill-on-Hudson, N. Y.

The following is the list of special prizes, and changes, additional to those which have already appeared in our columns—See page 77, issue of January 18, 1908.

One hundred Richmond, \$50 in gold, offered by E. G. Hill Company, Richmond, Ind.

For the most beautiful exhibit in the hall, \$20 in gold, offered by Miss M. I. Hammond, Fishkill-on-Hudson, N. Y. Each lady visiting the exhibition the first day will cast a vote on leaving the hall and the exhibit receiving the largest number of votes will receive the prize.

One hundred Killarney, \$50, offered by Robert Simpson, Clifton, N. J.

Fifty Liberty, \$25, offered by Adolph Farnwald, Hillside, Pa.

Fifty Killarney, \$25, offered by Dingee & Conard Company, West Grove, Pa.

Fifty Bride, \$25, offered by Traendly & Schenck, New York.

Fifty Liberty, \$25, offered by Emil Bentner, Park Ridge, Ill.

Fifty Kaiserin Augusta Victoria, \$25, offered by The Glode Coal Company, Chicago.

Fifty Golden Gate, \$25, offered by J. A. Budlong, Chicago.

Fifty Ivory, \$25, offered by J. F. Wilcox, Council Bluffs, Ia.

Best one hundred blooms of pink roses in the show, \$50, offered by Poehlmann Brothers Company, Chicago.

Fifty blooms red roses, Richmond and American Beauty excluded, \$25, offered by Poehlmann Brothers Company, Chicago.

One hundred Richmond, \$50, offered by Poehlmann Brothers Company, Chicago.

One hundred Kate Moulton, first, \$25, offered by Wietor Brothers, Chicago; second, \$20, offered by George Reinberg, Chicago.

One hundred Uncle John, \$25, offered by Wietor Brothers, Chicago.

One hundred Mme. Abel Chatenay, silver cup, value \$25, offered by Vaughan's Seed Store, Chicago.

Fifty American Beauty, \$50, offered by the Mogg Coal Company, Chicago.

One hundred Bride, \$25, offered by the Pulverized Manure Company, Chicago.

One hundred Sunrise, \$25, offered by the Florists' Review, Chicago.

Twenty-five Bridesmaid exhibited by growers with less than 50,000 square feet of glass, \$25, offered by Basset & Washburn, Chicago.

Twenty-five Bride exhibited by growers with less than 50,000 square feet of glass, \$25, offered by Basset & Washburn, Chicago.

One hundred Mrs. Potter Palmer, \$50, offered by S. Freeman & Sons, Chicago.

For the best new rose not in commerce and never previously exhibited before the American Rose Society; vase to contain not less than twelve and not more than twenty-five blooms, silver cup, value \$25, offered by F. R. Pier-son Company, Tarrytown, N. Y.

Fifty American Beauty, Cyclopeda of American Horticulture, by Professor L. H. Bailey, value \$30, offered by The American Florist Company, Chicago.

Twenty-five blooms of pink roses not disseminated prior to 1908, silver cup, value \$15, offered by J. B. Deamud Company, Chicago.

Twenty-five Bridesmaid, \$10, offered by W. W. Barnard Company, Chicago.

THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, Novem-
ber 6 to 15, 1908. William F. Kasting, Buffalo,
N. Y., is chairman of the show committee.

National Council of Horticulture.

The following is the schedule for press bureau of
National Council of Horticulture, of articles to be dis-
tributed from March 7 to June 27, 1908:

March 7—Hotbeds, Rose Growing, Dietetic Value of
Fruits, Starting a Flower Garden.

March 14—Pansies, Flowers for the Beginner, Mock
Orange, Pruning.

March 21—Germination of Seeds, Home Vegetable
Garden, Hybrid Perpetual Roses, Viburnums.

March 28—Good Plants for Garden of Annuals,
Lawns, Apple Orchard Management, Dietetic Value of
Fruits.

April 4—Golden Bell and Sweet Shrub, Tea Roses,
Phlox, The Home Orchard.

April 11—A Backyard Garden, Hibiscus, Kohlrabi
and Brussels Sprouts, Raspberries and Blackberries.

April 18—Rag Plant, Hedges, Red Hot Poker Plant,
Currants and Gooseberries.

April 25—Chives, Hybrid Tea Roses, Dogwood, Sweet
Alyssum.

May 2—Deutzias, Growing Dahlias, Kale, The Mul-
berry.

May 9—Bellwort, Hardy Chrysanthemums, Savoy-
Leaved Cabbage, Salsify.

May 16—Cannas, Beautiful Vines, Salvia, Strawber-
ries.

May 23—Water Lilies in a tub, Japanese Iris, Deutz-
ias, Cucumbers.

May 30—Honeysuckles, Lawns, Succulent Plants,
Beans.

June 6—Home Vegetable Garden, Window Garden
Plants, Shrubs for Succession of Bloom, Garden's
Shady Nooks.

June 13—Polyantha Roses, Succulent Plants, Sweet
Potatoes, Dietetic Value of Fruits.

June 20—Asters for Autumn, Planting Strawberries
in July, Jun-berly, Zinnias.

June 27—Hardy Ferns, Squash, Lettuce, Designing
Planting Scheme for Next Year.

The Council has issued in book form the proceedings
of the Congress of Horticulture held at the Jamestown
Exposition on September 23, 1907, a valuable publica-
tion, indeed. The price is 25c.; the book is linen bound
and contains 108 pages. Copies can be obtained from
Secretary H. C. Irish, Missouri Botanical Garden, St.
Louis.

The Seedsman and Plant Nomenclature.

In our Seed Trade column we publish this week an
important set of resolutions concerning the naming of
seeds, grains and plants, adopted by the Wholesale
Seedsman's League at a meeting held on February 18,
1908, and to which we desire to direct the especial at-
tention of American seedsman and others interested.

The decision of the League to recommend to the Amer-
ican Seed Trade Association that that organization es-
tablish a committee on nomenclature similar to that in
operation by the S. A. F. O. H. is one which should
receive general endorsement. The wonder is that such
an influential national body as the American Seed Trade
Association should have gone so long without a com-
mittee of the character referred to.

The practice of renaming varieties of plants has been
altogether too prevalent, and any steps taken to curtail
or prevent it will be welcomed by the entire horticul-
tural world; and if the recommendations of the Whole-
sale Seedsman's League, as outlined in the communica-
tion to which we draw attention, are received with favor
and put in operation by the American Seed Trade As-
sociation, which they assuredly should be, a great step in
advance will have been taken to eliminate from the cus-
toms and usages of this particular industry a reprehen-
sible feature in its workings that has nothing in its
favor to support, but everything to condemn, it—condi-
tions that should not pervade the transactions of any hon-
orable and reputable business. The fact that the offence
is common in no way mitigates, but rather aggravates it.
Surely when any person or concern has benefited human-
kind by securing a valuable new plant, for whatever
purpose it serves, the introducer or originator should
not be robbed of the credit that is rightly his in the
premises. And this credit can be awarded and perpetua-
ted by a strict adherence to the original title and descrip-
tion.

The very fact that no "patent" or other similar right
to a new plant can be secured makes it all the more
imperative that the moral rights of originators and in-
troducers be safeguarded to them by the trade itself, so
far as that can possibly be done; for the position of
one's neighbor in this respect this year may be that
of himself next year. We are heartily glad that the
League has suggested a method of procedure which, if
carried out faithfully and fully, will help drive from the
business one of its worst and most militating evils.

The proposition to establish a joint board of arbitra-
tion, to whom all disputes as to nomenclature can be
submitted, is also an excellent one, and should be car-
ried out.

In regard to the registration of names, suggested by the
League to be adopted, either by itself or by the Ameri-
can Seed Trade Association, which, we feel sure, will
be put in force, we would urge, in this instance, as we
have previously done in the case of the S. A. F. O. H.,
that the right to register a name be fully established
before any record of the name is made and published.
No one is omniscient; and written descriptions of any
plant are never so satisfying as to newness (which
registration implies) as personal examination; therefore,
the latter plan should have the preference—should, in
fact, be the only one accepted—previous to the privi-
lege of registration being granted.

Registration, it has always seemed to us, has a far
deeper significance than the mere protection of the
right to use the name to the individual or firm regis-
tering. One cannot dissociate registration from the
fact that the subject registered is a new one—it must
be new or it would not require to be named; and while
the public or the trade may not pay particular at-
tention to the published registration entry *per se*, it is a
different matter when that name is used in the trade,
and represents something tangible. Therefore, the great-
est care should be exercised to protect the originator or
introducer on the one hand, and the trade and the pub-
lic on the other, by seeing to it that registration stands
for, in very fact, all that it carries with it.

But, as we have several times stated, we believe the
registration of plants and flowers could best be done by
the Bureau of Plant Industry of the Department of
Agriculture. It is in a better position to do this work
more satisfactorily than any horticultural organization,
national or otherwise.

Another point which, we think, demands modification
or adjustment, is the comparative descriptive method
very generally followed in these days. It is by no means
uncommon, when describing a novelty, to select the best
standard plant in its class, and thereon base the merits
of the newcomer, in some instances the remark being
made that the novelty is "bound to supplant entirely"
the worthy and tried sort with which it is compared.
And while there may be some truth in the statement that
"every knock is a boost," it has never seemed to us to
be the right thing that a novelty should ride on the
shoulders of its tried and tested predecessors to fame,
or fortune, for its introducer or originator. Every new
plant should stand and be sold on its own merits alone,
without reference to its superiority or otherwise to what
has gone before; a truthful statement as to these par-
ticular merits being all that is required, in our opinion.

Registered entries clearly demonstrate this weakness,
for such we regard it, of novelty laudation by compari-
son with proven-worthy standard kinds, and in this re-
spect the American Carnation Society has established
a commendable precedent, by confining its registration
entries to *facts* and eliminating *opinions*.

Our Field.

Information has reached us on several occasions
that one of our esteemed Western contemporaries,
as well as its representatives, has, in its bid for ad-
vertising business, made the unfounded assertion
that The Florists' Exchange is "merely an Eastern
publication." With equal force, we think, could the
argument be adduced, that the trade papers pub-
lished in Chicago are merely Western publications,
if one were maliciously inclined to put forward as
fact an unsupported, bald assumption. There is,
however, but little need of any endeavor on our part
to prove the fallacy of our contemporary's adroit
allegation. Our columns furnish all the evidence re-
quired to brand the statement to which we allude as
being made out of whole cloth, silly and puerile.

The Florists' Exchange, as its columns demon-
strate, covers the whole field where horticultural in-
terests exist. It is not only national, but interna-
tional. The news it furnishes is drawn not from a
limited territory, but from all over this country, and
from Europe as well; and the statement that its cir-
culation knows no territorial limitation is substan-
tiated by the unsolicited proof provided by our ad-
vertisers, who, through their offerings in The Flo-
rists' Exchange, have received satisfactory orders
from Maine to California, as well as from foreign
parts.

We are not at all disturbed by the practices of our
contemporary, here alluded to, and this explanation
would not have been forthcoming, save to show one
of the many base means resorted to by unscrupulous
individuals to secure patronage; and to convince
those who may in any way be influenced by taking
for granted as fact, what is so manifestly misrepresen-
tation, through having made little or no inquiry
into the matter. We feel assured that every busi-
ness man worthy of the name will laugh at such a
puerile plea for patronage as that which our con-
temporary advances, and which is but characteristic
of it.

The Florists' Exchange was established, and has
since its inception been conducted, on the old-fash-
ioned, but always safe and sure method which has
the truism "Honesty is the best policy" as its basis.
It is operated on what are recognized the world
over as good business principles. It has never been
called upon, nor has it been necessary, neither does
it consider it good policy, to throw out any "sop"
to secure business, for it firmly believes that when a
business man is tendered a gratuity in any shape
or form, over and above that for which he is paying
a cash equivalent, by just so much is the value of the
actual purchase lessened, and his faith in its real
worth (or service rendered) impaired. There is not
a self-respecting man to-day who desires to be re-
garded as an eleemosynary object; and no one who
esteems himself would seek to place his fellows in
that undesirable position.

So far as advertising goes, space in his periodical
is the commodity a publisher has for sale; his price
for that space is based on what he can dispose of
it reasonably and leave a margin of profit. If he
throws in anything additional, by way of induceme-
nt, then it is clear that either his original charges
are too high, or that the service he renders his pa-
trons along this line is of such a nature as to
require the free gift given to pacify these patrons,
and in a degree lessen their disappointment concern-
ing the inferior character of that service.

The Florists' Exchange congratulates those who
have so generously given it their support for the
past two decades, as well as itself, that its business
methods have been so generally appreciated. Not-
withstanding added competition, and unusual, unde-
sirable and untoward conditions which that compe-
tition has brought, The Florists' Exchange has met
all fairly and squarely and by doing so has never lost
one foot of ground. Conversely, it continues to ad-
vance, to make new friends and new patrons every
week, from East, West, North and South. This is a
state of things that, we have no reason to doubt,
will remain, for it has been brought about by, what
we are egotistic enough to believe, the inherent merit
of our publication, and by, what we are confident of
—impartial, and liberal treatment of all. On this
cast have we set our (business) life, "and will stand
the hazard of the die," which, so far, has been a
patronage reaching up to our most sanguine expec-
tations, despite the malicious misrepresentations of
our true status in the field of horticultural trade
journalism and other reprehensible methods that
blight the fair name of that honored and honorable
profession.

CLUB AND SOCIETY DOINGS

NEW YORK FLORISTS' CLUB. The club met on Monday evening, March 9, President Weathered in the chair. There was a fair attendance. The dinner committee, through Mr. Sheridan, reported and was discharged with thanks. It was pointed out that less than 20 per cent. of the total membership was present at the annual feast. The outing committee made a report on the lines already appearing in our columns. W. E. Marshall is chairman; Charles Schenck, treasurer, and J. A. Manda and Robert Schultze, sergeants-at-arms. It is hoped that the members will be as liberal in the way of advertising in the program and donating prizes for this occasion as formerly. The co-operation of the neighboring horticultural societies at Glen Cove, Bay Shore, Tarrytown, Red Bank, Madison, Orange and other points is to be asked.

N. C. Schreiner and R. Henry Cathcart were nominated for membership.

President Weathered appointed as a committee on transportation to the forthcoming S. A. F. convention at Niagara Falls, Messrs. Patrick O'Mara, H. A. Buryard, Charles H. Totty, J. T. Withers and John Young.

Professor L. C. Corbett, Horticulturist, Department of Agriculture, Washington, D. C., read an instructive paper on "Soil and the Florist," which appears elsewhere in this issue. At the close of his address Professor Corbett was awarded a hearty vote of thanks.

Quite a discussion followed, participated in by Messrs. DuRie, Hallock, Birnie and O'Mara. The chief points brought out were that the compost heap should be about ten months old before the compost is used on the benches. The heap should not be too deep, because the action of bacteria is not as great in a low temperature, nor in an excessively high one, or where it is too dry. When the soil is taken in the hand and it relaxes after being pressed, it is then in an ideal physical condition for use. During the months of July and August was the period when these bacterial organisms are at the highest efficiency. Soil that is put under cover is apt to get too dry and powdery, and in this condition one of the main objects in the preparation of the soil is defeated. Professor Corbett stated that it was necessary in order that the soil should be freed of all detrimental matter through freezing to keep the compost heap comparatively shallow, not to exceed the depth to which the soil naturally freezes, which in the vicinity of New York would be not more than ten inches.

John Birnie created some merriment by relating his experiences with different soils. In Canada where he was first employed after coming from Scotland the first carnations he grew were planted out in an abandoned negro cemetery of a clayey nature, and excellent results were obtained. When he went to Buffalo the soil was so sandy that the plants were often blown out of the ground in a windstorm, and there they also did well. In various soils on Long Island and New Jersey his carnations had also been satisfactory, and the first time he applied fertilizer to his soil was in his present location, the material having been brought from a heap where the carcasses of dead animals, such as dogs, etc., had been thrown. Often the compost contained the hairs of the dogs that had not decomposed, and the application of such compost had been beneficial. He was of opinion that the plants would find out their own nourishment in whatever kind of soil they were grown.

Mr. Hallock paid a tribute to the Government in its endeavor to assist floriculture, and stated that the time would soon come when Washington would be the mecca for the florists to gather information in their own particular lines.

Mr. O'Mara called attention to the eel-worm scare some years ago, and asked whether it would be possible to use the same soil for roses, carnations, violets, etc., from year to year if sterilization was practiced and the proper fertilizers applied. He spoke of the advancing values of real estate and the difficulty facing the florist in the securing of greenhouse soil in the future, and thought if this method could be safely followed, many men that are now rather staggered at the prospect in store for them would be glad to know of it.

Professor Corbett stated that it was quite possible for this to be done if, in addition to commercial fertilizer, well decomposed stable manure was added. The soil could be used indefinitely, but sterilization must be very carefully carried out so as to kill all germs of disease and insect life at every stage—from potting from the propagating bed, removal to the field and transplanting into the houses. In many sections of the old world today, which have been in cultivation for hundreds of years, the soil is as fertile as it ever was, brought about by proper fertilization and rotation of crops. The system adopted in this country is a robbery process, because, when the soil in one section has been drained of its fertility, the farmer removes to another one and continues the process. In answer to a question by Mr.

Hallock as to the danger of destroying the bacterial organisms mentioned by the professor when sterilizing the soil, Mr. Corbett stated that these organisms had already done their most effective work before the time arrived for the soil to be brought into the greenhouse. Destruction of any of the bacteria then remaining would not prove detrimental. The best test that had yet been discovered as to when the soil had been thoroughly sterilized, was, as he stated in his paper, by inserting a raw potato in the heap being sterilized, and when the potato is cooked, then the soil is in fit condition for use. Professor Corbett urged the necessity of careful and systematic sterilization. In concluding his remarks, he pointed out the interest taken by the Department of Agriculture in solving the problems of the florists, and asked the co-operation of the trade. While he did not deprecate the value of the State Experiment Stations, these institutions were not so well equipped as was the Department for this particular work. Already the Department has six greenhouses in which floricultural experiments are being made, and four more are to be added. They will thus be in a position to do more for the floricultural interests of the country than heretofore, and the florists should take advantage of every opportunity of securing assistance from the Department in the solution of the various problems that confront them.

President Weathered read a letter from Secretary Hammond of the American Rose Society calling attention to the forthcoming show of that organization in Chicago on March 25 and 26, soliciting exhibits and urging a large attendance.

The members interested in bowling discussed the subject of having a team to compete at the Niagara Falls convention, and, in order to create interest in the game, President Traudly of the S. A. F. offered to pay the transportation expenses to the convention of a team whose members should in practice average 155. Mr. Traudly's generous offer was received with acclaim, and steps were immediately instituted to form a bowling club. The meeting then adjourned.

There were several very interesting exhibits for the award committee to pass judgment upon. One of the most interesting was a vase of Bencon carnation, grown by William Eccles, superintendent of the Mortimer L. Schiff estate at Oyster Bay, L. I., N. Y. These flowers were so large and otherwise superior in their length of stem and color that few who knew the variety would have recognized it. The blooms were fully 3½ inches in diameter, and were carried on stems approximating thirty inches in length. Mr. Eccles said he had been cutting flowers of the same or of better quality all winter. He grows the plants in a night temperature of fifty degrees and feeds them with liquid manure; the variety is evidently one that will stand any amount of feeding, but does not demand a high temperature. Mr. Eccles was awarded a cultural certificate.

A. T. Boddington, seedsman, 312 West Fourteenth street, exhibited a plant of *Primula cortusoides* Sieboldii (syn. *Ramona*), Queen of the Whites. This was a beautiful and well-grown plant and was awarded the thanks of the club.

Anton Schultheis, College Point, L. I., N. Y., showed two plants of a new polyantha rose named Apple Blossom, and when one caught the fragrance of the flowers, he very easily understood the source of the name, as the full fragrance exhaled was a beautiful apple blossom scent. The plants, though small, were well furnished with flowers, and the variety is evidently one that will prove most useful as a commercial sort. Mr. Schultheis has a large stock in course of propagation, though no flowering plants are to be offered for sale this Spring. The committee awarded the plants exhibited a preliminary certificate. The pink carnation No. 20 from W. A. Manda, South Orange, N. J., was again exhibited and scored 76 points.

DUTCHESS COUNTY (N. Y.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held at Poughkeepsie, N. Y., February 26, 1908, at which there was a large attendance to listen to a paper entitled "Our Profession" by Horace Deal of Rhinebeck, N. Y. President C. J. Reynolds presented a plan for beautifying some lots in the lower part of the city near the depot, which are at present decorated with billboards and growing to noxious weeds. His plan is to remove these boards, grade, plant and keep the lots as beauty spots as long as they may remain vacant. H. J. Osterhoudt exhibited several fine vases of *Antirrhinum majus* and *Primula obconica grandiflora*.

The next meeting will be a carnation meeting and will be held March 25, 1908. H. G. C.

NEW JERSEY FLORICULTURAL SOCIETY.—Carnation night was observed on March 6 with a large exhibition and a generous attendance. John E. Haines, Bethlehem, Pa., was present with Imperial and John E. Haines, W. A. Manda made an exhibit of a vase of one hundred blooms of his seedling No. 20, a new clear pink, showing well under electric light, soon to be introduced through John N. May, and James D. Cockroft, Northport, L. I., exhibited Harvard; Oscar Carlson, Fairfield, Conn., a new pink seedling No. 11. There were also exhibits of carnations from local growers. Lager & Hurrell and Julius Roehrs Company made

display of coral and other items also showing the new rose Newport Fairy.

A strong sentiment prevailed to continue special flower nights and W. A. Manda placed ten dollars in the treasurer's hands for cash premiums. J. B. D.

MONMOUTH COUNTY (N. J.) HORTICULTURAL SOCIETY. The annual banquet of this society was held at the Sheridan, Red Bank, last week. The decorations by W. Turner, H. A. Kettel, George H. Hale and N. Butterbach were exquisite, and the affair was a pronounced success. Dr. W. S. Whitmore acted as toastmaster and was at his best. Witty speeches were made by A. Herrington, Madison, N. J.; Rev. J. A. Reynolds; President Kennedy, and Henry Wood, president of the Elberon (N. J.) Horticultural Society. George Steele, John Yeomans, H. A. Kettel, and N. Butterbach, Rickards Brothers, New York, entertained the company with some of the latest songs. Among the visitors were F. G. Scollay and brother, Brooklyn, N. Y.; William O'Brien, R. Vance, L. E. Brown, J. Carliss, R. W. Stryker, Alfred Griffiths, Joseph Applegate and others. In all there were about 65 members and guests. B.

OUR READERS' VIEWS

The Argentine Ant.

Editor Florists' Exchange:

I wish to call the attention of your readers, and particularly that of all florists, and nurserymen in the Southern States, to the danger which threatens their business in the introduction of the Argentine ant. This insect has already become established at New Orleans and vicinity and while it is not known how far north it will thrive in the open air, it certainly is greatly to be feared as a pest in northern greenhouses. It is very injurious to many cultivated flowers and ornamentals, destroying the calyces, while in the South it threatens the fruit growing industry, as it feeds upon fruit buds as well as fruit.

The Argentine ant is also a fearful pest in the household, and indirectly favors the development of many species of Coccidia and Aphidida.

Its dissemination in shipments of groceries, food stuffs and household goods cannot well be prevented, but precaution should be taken against its introduction among greenhouse plants and nursery stock. It is reported upon reliable authority that in many greenhouses in the infested region every plant has more or less of the ants upon it, and serious losses may result if greenhouse plants are purchased in New Orleans or vicinity. Agricultural College, Mich. L. R. TAFT.

Robert B. Leuchars.

Robert B. Leuchars, founder of the Burns Memorial Fund and first president of the Burns Memorial Association, died March 3, at his home in Brookline, Mass., following a prolonged illness. He was eighty-five years old and had lived in Boston and its vicinity about fifty years. Mr. Leuchars was at one time an expert landscape gardener and following his retirement about twenty-five years ago became well known for his prolific writings on matters pertaining to horticulture, floriculture and arboriculture. In his earlier days, he laid out a large number of private parks in New York State. He served his apprenticeship with his father in Scotland and later was bound out to another gardener and still later did work on some of the finest estates in England.

Julius C. Gerlach.

Julius C. Gerlach of the firm of Borzow & Gerlach, florists, Newark, N. J., died on March 9, 1908, at St. Augustine, Fla., of heart disease following an attack of asthma. Mr. Gerlach went to St. Augustine for his health about five weeks ago. He had been sick for three weeks, but no fear was felt among his friends up to a day or two before his death, which was unexpected.

Mr. Gerlach was born in Thuringen, Saxe-Weimar, Germany, sixty-three years ago, and went to Newark, N. J., when about 20 years of age, where he engaged in the florist business, and was connected with it up to five years ago, when he retired, after a partnership of thirty-eight years. He was unmarried.

The deceased gentleman was widely known in Newark and was highly esteemed for his personal qualities. He was artistic in his tastes and possessed much knowledge and skill in making floral designs and arrangements. He took much interest in public questions and affairs.

Soil and the Florist.

Read by Professor L. C. Corbett, Horticulturist, Department of Agriculture, before the New York Florists' Club, Monday evening, March 9, 1908.

The subject which has been assigned for our consideration this evening is the commonplace, low, down-trodden subject of the soil; so commonplace indeed that no one stops to think of its origin, its mission, or the work that is going on constantly within it. Like many other commonplace, omnipresent subjects, the soil elicits from us no thought, no consideration, and no attention, except that which we are compelled to bestow upon it in order that we may wrest from it a livelihood. If we stop for a moment and consider the origin of the soil we find that it is the refined portion of the earth's crust, the earth's crust being made up of rock, of earth and of soil, and the most important of these is the soil, because it is the soil alone which furnishes a congenial habitat for plants upon which all the higher animals, including man, must depend for sustenance. The soil, therefore, is the most important factor with which agriculture has to deal, and is, at the same time, the one factor most often overlooked and the one about which we know least. While chemists have attempted to analyze it, physicists to separate it, and philosophers to philosophize about it, we know comparatively little of its intricate relations to the plants living upon it. If we were to stop and trace the relations which the various forces in nature bear to the formation of the soil we might spend all the time allotted to us on this phase of the subject alone. If we were to consider the action of frost, of heat, of moisture, and of plant and animal life which inhabit the soil, upon its formation, its character and its fertility, we should have a subject requiring many sessions to discuss.

In general farming operations the character of the soil must, in a great measure, be taken as it is found in nature. The farmer must make the best use of it that is possible under the environment in which he finds himself. With the florist, however, conditions are very different. The florist is working under an artificial climate and usually with an artificial soil. It is more economical in general for florists to combine the primary elements entering into the composition of soil for the purpose of producing the required composition for the special crop in hand, rather than to attempt to import from localities possessing such soil the amount required for his use. In other words, the florist is interested in the manufacture of as near as possible an ideal soil for the particular crop with which he is dealing. He attempts, through the construction of frames, hotbeds, and greenhouses, to produce artificial conditions which shall be congenial, and as nearly ideal as his knowledge will permit, for the house and rearing of the plants with which he is dealing. So also with the soil. It is his intention in placing soil in the greenhouse, for a particular crop, to make such combination of loam, sand, peat, and humus as will give ideal physical conditions for the roots of the particular crop and will at the same time produce an immediately available supply of plant food of the character demanded by the particular crop. While at the present time these matters are largely matters of routine and thumb rule, yet experience has taught us that certain proportions of leaf mold, of sand and of loam are best for carnations, while a slightly different proportion is best for roses, and so on through the list; some plants require soils which are loose and peaty in character, while others require those which are compact and somewhat clayey. These variations have never been taken up and studied systematically by chemists or physicists. In fact it is my belief that here is a very important field for investigation. The only work which has been done along this line, which I can bring to your attention, was that carried out by Galloway, in the study of lettuce soils, in which a very careful physical examination was made of the different types upon which lettuce was most productive.

Since soil is the loose conglomeration of broken down and disintegrated rock, of decayed plant and animal matter, some one has aptly paraphrased it as being "the cemetery of the ages and the resurrection of life." Surely when we look upon a house of carnations or roses and observe the delicious perfume, exquisite color and the perfect shape of the flower buds, we believe the poet was correct when he made the statement just quoted that the soil is the resurrection of life.

As has been noted, natural soils do not answer the purpose of the florist and the greenhouse man. We cannot afford to take nature's product, because in few instances are we able to secure an ideal combination, strange as it may seem, for the particular crop with which we are dealing. Nature builds not for special purposes but for general purposes, hence when we specialize in the cultivation of a particular crop and place it under extreme conditions where great profit must be derived it requires other factors than those found in nature, hence the necessity for the florist studying the composition of soils adapted to different crops.

Food Supply the Prime Factor.

In general agricultural parlance, as well as in floricultural literature, frequent allusion is made to soil fertility, to plant food, to fertilizers and methods of fertilization, but food supply is only one factor in which we are interested in the making of soils for greenhouse use. In field practice as well as under glass, too little attention is given to ideal mechanical conditions of the soil. The mechanical condition of the soil determines, first, the water-holding capacity of the soil, and the water-holding capacity of the soil which is dependent upon the mechanical condition determines the availability of the plant food which the soil contains, provided of course the plant food is there in sufficient quantity. It will be seen then that the question of the use and the availability of plant food is dependent upon the mechanical condition primarily, rather than upon any other single factor.

Other Important Considerations.

Other important considerations in connections with our greenhouse soils are freedom from weeds, freedom from detrimental insects and germs of disease. By special methods in the handling and preparation of greenhouse soils, these requirements and difficulties can be largely attained or overcome as the case may be. The mechanical consistency of the soil can be produced by a proper combination of sand, of compost, leaf mold, peat, loam, and manure, depending upon the ideal to be attained. The available plant food can be supplied through the use of thoroughly decomposed manure, of nitrates, potash salts, and the phosphates. In general, however, it should be the aim to combine the ingredients entering into a compost several months in advance of the time when it is to be used in the greenhouse in order that nature may have opportunity to prepare the materials contained in it for use by the plant. Comparatively few of the so-called fertilizers which are upon the market can be added to the soil and give immediate assistance to the plant. The soil must have an opportunity to, as it were, digest and assimilate these materials before they become of the greatest importance to the plant, and in this work the soil is assisted by the bacteria which it contains.

Facts About Bacteria.

No one should become agitated over the use of the word "bacteria," for we shall have much to say of it later on. In other words, the materials which are to be combined in the greenhouse soil should be thoroughly composted before they are used in the benches or in the pots. The importance of this is made clear by the fact that every milligram of soil contains between 30,000 and 1,500,000 minute organisms which derive the means of their existence from the materials in the soil. The personnel of this great population is constantly changing. Every minute sees a new generation brought into existence and an old one pass away, hence the remark, "the soil is the cemetery of the ages." Millions upon millions of generations of minute organisms are constantly passing in this great world beneath our feet. In natural soils these teeming myriads are found chiefly within the first four feet of the earth's crust, and the top soil which we cultivate and not more than a foot in depth contains by far the greatest portion of this soil population. This fact is of interest to us because the soil bacteria are of all types and classes, those which are beneficial and those which are injurious to crops, to man and to animals, and it is fortunate that this population is confined to the surface soil and that the water bearing strata of the earth is comparatively free from them. In other words, the water of the soil drawn from a strata ten or more feet below the surface is comparatively free from contamination by soil bacteria or surface bacteria, provided there is no surface drainage to it, hence the value of the deeper soil providing an uncongenial place for these organisms. The fact that so great a number of these organisms exist in the upper layer of the soil is due to the presence of decaying organic matter. Sandy soils contain fewer bacteria than clay soils, and the soils in which there is much decaying matter contain the greatest number. These organisms which are of importance to agriculture, known as soil bacteria, are able to transform the inert plant food in the rock particles, in the decaying vegetation and in the decaying animal forms into such shape as makes it available for the next generation of plants. These little organisms are the intermediaries between the past and the future generations that live upon the soil. In soils to which new supplies of organic matter are not frequently added these organisms after years of continuous action deplete the quantity of humus contained so that it has been found that the rich prairie soils when taken up for agricultural purposes may contain as high as 20 per cent. of humus and after 20 years of cultivation this supply was reduced to 2 or 2½ per cent.

An important function which these organisms play in cultivated soil is to bring the organic forms of nitrogen into forms available for plant use, which is that of nitrates. Without going into the discussion of the methods by which this is accomplished it is sufficient to say that these organisms thrive best in soils where there is an abundant supply of moist organic matter which does not become highly acid. The benefits from the use of

lime, gypsum and other materials which correct acidity may largely be attributed to the benefit which they work upon these minute organisms in the soil. The alkaline condition brought about by the application of lime and gypsum gives a more congenial home for the bacteria than does the acid conditions which are brought about by fermentation and decomposition. These bacteria work only upon the products of decomposition and fermentation and transform them into those forms of nitrogen which are available to plants. All of these steps are essential, but if one is excessive the other suffers in consequence. This operation of transforming the products of decomposition and combustion is called nitrification.

If our compost heaps are made somewhat in advance of the period at which the soil is to be used in the greenhouse, opportunity will be given for this digestive operation, which is carried on by the soil bacteria, to take place. Nitrification will take place, but in order that nitrification may go on it is essential that the compost heap be made not too deep and that it be kept moist rather than dry. Excessive heat is detrimental to their existence and causes a cessation of nitrification. Excessive cold operates in the same way. The height of the work is accomplished under July and August heat conditions with the normal moisture. Excessive moisture is quite as detrimental as lack of moisture, so that attention should be given to the condition of the soil while it is in the compost heap in order to make an ideal greenhouse soil.

This brief sketch will serve to illustrate the important bearing which these unseen and to most of us unknown organisms have upon the important work of our lives, that of making a livelihood. And strange as it may seem it is only within comparatively few years that science has known anything at all of the importance or the relation of these organisms to soil fertility and plant life.

The Limitations of the Chemist.

Years ago it was thought that the chemists could supply us information concerning the composition of our soils and the requirements of the plant. True it is, he can analyze plant products and tell us of what they are composed; he can analyze the soils and tell us what they contain, but his analysis is so far reaching that it does not tell us the relation which the constituents of the soil bear to the living organism—the plant. The fertility of the soil cannot be determined by chemical analysis. The plant alone is the only means of telling us what the soil contains so far as plant requirements are concerned. Mechanical analysis can tell us the fineness of the soil, the proportion of sand and of clay and of organic matter, but it can go no further. For the ultimate analysis in which we are most interested we must constantly return to the plant and by noting its behavior, its growth and its color, determine from experience what the soil lacks in order that we may secure the growth desired.

Value of Proper Moisture Conditions.

As I have noted, the mechanical condition of the soil determines to a very great extent its moisture-holding properties, or in other words, its drainage. This is a very important consideration, for upon the moisture content of the soil depends the soil solution, which is the minute quantity of water which surrounds the soil particles and which carries in solution the plant foods which have been derived from the soil particles, either organic or inorganic, through the action of the fermentation, decomposition and bacterial action. In many agricultural operations, including greenhouse work, proper moisture conditions for the plant determines more than any other factor the resultant crop, for if everything else is satisfactory—temperature, sunlight, food supply—and moisture alone lacking none of these have any beneficial effects. In fact, as soon as the moisture supply is withheld the beneficial action of the sun becomes deleterious, the heat which we attempt to supply to stimulate growth becomes injurious and the large amount of available plant food in the soil, instead of proving a benefit, becomes a factor of unrest. The plant suffers, declines and dies, but by the proper regulation of the moisture supply the plant thrives. Its functions can be maintained to a high degree, and in fact many of the injurious pests and organisms with which we have to contend in our greenhouse work can be controlled through a proper use of water. There is no more effective agent in the control of the red spider than water. Agriculturists, and particularly truck gardeners, are alive to the importance of an adequate supply of water to be used just at the proper time. Where extensive garden operations are conducted, oftentimes a heavy expense is incurred in order to provide an adequate supply of water which may be used only two or three times during the whole growing season, but the use of the water just at these critical periods measures the profit to be derived from the crop. Without water the crop would be a failure and under artificial conditions such as exist in greenhouses an artificial supply is absolutely necessary.

Water Temperature.

In view of these facts numerous experiments have been conducted to determine the effect of using water at different temperatures in watering plants, the idea being to determine whether or not growth could be stimulated by the use of warm water, and if the soil temperature

could be increased so as to lessen the cost of heating by this means. The general conclusions which may be drawn from these experiments seem to be as follows: That the temperature of the water, so long as it is above the freezing point, has no very marked influence upon the character or growth of the product. In fact, plants watered with water at 32 degrees and those watered with water at a temperature of 70 degrees show very little difference in the rate of growth, maturity or yield of product. The benefit which might be expected to come from the addition of warm water to the soil is only temporary. The temperature is only temporarily raised by the amount of water necessary for the requirements of the plant. When cold water is applied the temperature of the soil is for the time being slightly reduced, but it soon recovers its normal, and in the case of the use of very warm water the temperature is temporarily increased but very quickly returns to the normal, whatever that may be, according to the temperature at which the house is maintained, so that it has been found that the time and expense necessary in heating water for use on greenhouse crops is not justified.

Soil Sterilization.

In those portions of the United States where the soil does not freeze during the Winter months, or freezes only slightly, low organisms, called nematodes, are able to maintain themselves in the soil throughout the Winter. Under such environments these organisms have become parasites upon a great variety of plants and interfere seriously with the commercial cultivation of many crops throughout the northern portion of the United States, and in other sections where Winter conditions of the character above described prevail. These little eel worms, by attacking the tissue of the roots of the plants, cause galls or enlargements to appear upon the roots and as these are of a calky nature the normal function of the root is interfered with and the plant languishes and in many instances dies. In practically all serious infections from nematodes the possibility of a profitable crop is defeated. In the open there is no satisfactory way of combating these organisms except in the development of resistant strains of plants. In many instances perennials have been able to develop characters which make them immune or able to contend with these injuries, but in the case of most annual plants conditions are quite different and few of them, or comparatively few of them, are able to resist severe attacks of nematodes. On small areas it is possible to add materials which are more or less effective in the control of these organisms, and in some instances it is possible to sterilize the soil by means of heat, but on large commercial areas this is a different question. In greenhouses, however, the problem is quite different. As has been noted the soil is prepared artificially and the question of keeping it free from nematodes is much more easily handled than in field practices.

While root galls upon certain of our greenhouse plants have been known for a number of years, particularly upon tomatoes, cucumbers and roses, it was not until about 1892 that any definite information was to be had upon the subject. It had been determined that by freezing the soil in which nematodes were abundant they could be destroyed and a clean crop then grown in the same soil, but as not all the soil which is used in the greenhouse can be annually frozen, the idea of sterilizing the soil by heat took hold upon the growers and has been practiced with good results. The first idea was to sterilize the soil by heating it over an open fire in a shallow pan. This is effective for sand to be used in propagating beds and for sand to be scattered upon the surface of seed pans and flats where germinating seeds or spores are to be handled. When heating in an open fire in a pan is resorted to, in soils containing a large proportion of organic matter, the physical condition of the soil is very perceptibly changed and is less practicable than when not so heated. In fact its water-holding capacity is modified, its physical conditions are also altered by the destruction of a portion of the humus in the soil and then the chemical changes are decidedly interfered with. This practice, therefore, is almost entirely abandoned for the seeming better one of sterilizing the soil by the use of live steam. This work can be done either upon the benches when proper provision for doing the same has been provided, or it can be accomplished by means of a specially constructed sterilizing box. If the work is to be done upon the benches it can be accomplished by the use of drain tile laid at intervals lengthwise or crosswise of the benches and provided with an opening through which a pressure hose carrying live steam can be inserted. The steam passes through the tile and out into the soil, heating it to a sufficiently high degree to destroy these organisms. One difficulty with this method is that it requires a large amount of steam and it is not easy to cover the bed so as to hold the temperature in the surface soil at the same point that it is in the deeper layers. It has this advantage, that it does not necessitate the removal of the soil, but in ordinary greenhouse practice where raised beds are used the soil is annually removed, this advantage is of little consequence.

(To be continued.)

A BEAUTIFUL NEW ASTILBE. The hardy flowering plants known to florists as herbaceous species are by botanists classed as Astilbe and Aruncus. They are very decorative in the garden but of especial value for Winter cut blooms, as they force readily. Astilbe japonica has long been a favorite for its abundant fleecy white flowers, but has lately been supplanted by several beautiful new hybrids. The variety known as W. T. Gladstone, more compact and floriferous, is now largely imported in place of japonica. "Blondin," is claimed to be superior to Gladstone. The bloom is glistening milk white in color. Other good new hybrids, more suitable for garden use, have been produced by crossing the pink A. chinensis and even the new purple A. Davidi, with japonica. The colors are bluish white and silvery

pink. The Davidi cross can come in any shade. A splendid new white-flowered species from western China, not yet introduced in this country, is A. grandis. It is claimed to grow six feet high in rich, moist soil and bear panicles of bloom 2 1/2 feet long. The showy leaves are also over two feet in length. Doubtless hybridizers will use it as soon as it becomes available. W. V. F., in Rural New Yorker.

THE NEW WEAVES. Professor T. H. Chittenden, Entomologist, United States Department of Agriculture, Washington, D. C., discusses the subject in Circular 99, issued March 6, 1908. The circular is illustrated, and furnishes suggested remedies for these pests.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BEETEMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Flowering Plants in the New York Market.

At this season of the year blooming plants are at their best, and the endless variety now seen in the window displays and throughout the florists' stores is nothing short of wonderful. Up-to-date growers are constantly experimenting with new and untried varieties, and many pleasing and attractive novelties result from their efforts. Flowering shrubs and garden flowers are commanding more attention every season, and every Winter sees a new or hitherto untried novelty offered to the public.

The Japanese flowering almond has been the most enthusiastically admired shrub of the season, both in standard and bush form. It has proven most satisfactory as a flowering house plant and is equally useful for window decoration. The grower delivers the plants in tight bud, which will develop perfectly in the house or store in about two weeks, when the bushes will present a mass of exquisite double pink flowers. After these have fallen the leaves make a start and grow rapidly, rendering the plants almost as attractive as with the flowers.

The crab apple is also being forced for this market and makes a nice addition to this class of plants. When in the bud the flowers are a reddish pink and when open develop a pretty shade of pale pink.

Kalmia latifolia is somewhat of a novelty at this season of the year. Well-grown nursery plants are used for forcing purposes. Plants that I saw displayed the past week were well worth while, and being out of season one scarcely recognizes the well-known mountain laurel.

Magnolias are likewise being forced by some growers and prove an attraction, although they seldom develop enough flowers to make them salable as flowering plants.

Some excellent specimen plants of wistaria in shades of mauve and purple are being displayed in the store windows, and some large plants of the white variety are wonderful, being a perfect mass of flowers. They are mostly trained in globular form, and make an attractive window decoration in themselves.

Forsythia is one of the best flowering shrubs for forcing purposes, its long branches of yellow flowers being very useful and decorative; in addition to being one of the easiest shrubs to force, it has wonderful lasting qualities, remaining good for several weeks after cutting.

The Japanese flowering quince is always beautiful. The European laburnum has been forced here, but it does not bloom profusely enough. I have seen a few plants displayed and the beautiful racemes of bright yellow flowers make it a most desirable acquisition.

H. H. Ritter.

Pres.-elect Dayton (O.) Florists' Club

Lilacs have now become a permanent feature in the plant market; the following varieties are considered the best for forcing: Charles X, Marie Legraye, and Louis Spaeth. This latter is the finest of the dark sorts, the clusters being very large and of a dark purple. The variety called Marley forces very early, and is a good white; Mme. Lemoine is the finest double white.

Pot plants of English wallflower are proving another good addition and sell readily to lovers of old-fashioned flowers. Some plants of polyanthus, in several brilliant shades, were shown as a novelty in one of the leading stores this week, and reminded one of the auriculas, once so popular in Europe. The brilliant amaryllis has also been seen in quite large numbers here this Winter, the flowers, being of good size and color, commanding attention wherever shown.

The English hawthorn, pink and white, when well grown, make surprisingly attractive plants and are especially durable as house subjects. The flowers develop slowly and stay on the plants for a long period.

Acacias we now have in several varieties. *Azalea indica* and *mollis* are numerous; genista, standard and in bush form, hyacinths, tulips, crocus, jonquils, daffodils and even snowdrops all help to make up an almost endless variety of flowering plants, suitable for all tastes and pocket-books.

D. RAYBUN.

F. H. Kramer.

Fred. H. Kramer, the newly elected president of the Washington (D. C.) Florists' Club, is a native of Alexandria, Va., and is thirty-eight years old. He opened a small establishment twenty years ago and since that time has gradually added to his local interests until now he is one of the largest dealers in cut flowers in the city. In his greenhouses in Anacostia he employs a large staff of men.

Mr. Kramer was a conspicuous exhibitor at the last meeting of the American Rose Society, when he won sixteen prizes and certificates. Among his exhibits was the new rose, Queen Beatrice, a variety which he introduced into commerce.

Mr. Kramer's interest in the affairs of the Washington Florists' Club has been of long standing. He has done much to further the success of the organization; his election was made by a large majority, and he has been heartily congratulated on the honor.

F. H. Kramer.

Pres.-elect Washington (D. C.) Florists' Club.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

A GOOD HOME-MADE CEMENT.—Something which the suburbanite frequently needs in small quantities, but which he rarely has on hand, is a good, quick-setting cement for uniting small fragments of iron, setting wooden handles into tools, and a hundred and one other small jobs. A very good cement which will answer almost any requirement may be made by dissolving common orange shellac in enough alcohol to form a paste. This may be kept on hand in a tightly corked bottle with a wide mouth—tightly corked, or the alcohol will evaporate. When it is desired to use the cement, place as much as it is desired to use in any small tin vessel and set the paste on fire. The alcohol will soon burn out, and the cement should then be quickly used, before it has time to cool. This cement is very strong and is water-proof.—Suburban Life for March.

March 14, 1908

Toledo, O.

Trade and News Items.

Business has suffered through the high water which the breaking weather has caused. Through a break in the bridge originally caused by the ice, a large part of our population and those living on interurban trolley lines rather stay at home than undergo the inconvenience of coming to the city.

Water entered the boiler-room of J. Fischer's greenhouses to the height of several feet and no fire could be made for a few days; fortunately the outside temperature was mild enough so that nothing froze during that time. The carnations in one house, planted in solid benches, were 18 inches under water.

The Schoon Floral Company has removed to 409 Adam street. Their new quarters are more commodious and far better located than the old stand.

The flower store of O. T. Wisner, which was opened on December 1 of last year in the heart of the city, has been closed and Mr. Wisner will give his entire attention now to the store and greenhouses located on Cherry street.

Clover seed reached to-day (March 9) \$12.15 per bushel on the exchange, which is the highest for several years. Seedsmen so far have not had a very good trade, as the weather has been very cold until now.

Our club went around visiting on Sunday, landing first at C. Kaminski's place, where everything was found in best order. John Gratopp's establishment is quite extensive; carnations are grown almost exclusively and a few bedding plants in a couple of old houses, where the sun does not reach. A new house, 41x125 feet, was built last Fall and will be used for roses; lettuce occupies it temporarily. Harry Heintz's place was found in splendid order. Roses and carnations take up the most of the houses and a large number of bedding plants is coming on; these have always been sold at planting season at a uniform retail price of 5c. each. At Chas. Koelker & Sons' plant carnations and roses take up most of the room; the balance is devoted to miscellaneous stock to be used for the store. S.

Cincinnati.

Trade and News Notes.

The less we say regarding the state of trade the better, and to quote prices is of no value to any one at the present time. Carnations and roses are rolling in, and the only outlet is the street merchants, composed principally of Greeks; but this state of affairs cannot last long. It is only when flowers are scarce that any one makes any money in the business, and if the growers would only stop building and keep the supply on the scarce side, they would save money and make money at the same time. Take for instance the violet—the Rhinebeck and Doughkepsie growers are not making their salt; there are too many in the business and all are trying to get a whole loaf; consequently, they are not getting more than a quarter loaf, if that. Growers who are forcing bulbs, such as Roman hyacinths, narcissus Von Sion, jonquils, lilies, etc., are losing money this season. Plantmen seem to be faring better, as that part of the business is not overdone.

The first Augusta gladiolus and the last chrysanthemums of the season were grown by Thomas Jackson of Latonia, Ky., and consigned to L. H. Kyrk, March 3.

Gus Ludwig and son, Allegheny, Pa., called on the 7th inst. on their way home from California. They seemed quite enthusiastic over the climate there, and undoubtedly it is fine.

This morning (March 9) brought one of the heaviest snowstorms of the season—about four inches, which is quite a fall for this section of the country. The Ohio river is again on a rampage, and 53 feet rise is expected. This, of course, will cause some uneasiness, but if it goes no higher the damage will not be great.

William Lampert, Xenia, O., was in the city March 7, and is thinking of opening a store in Hamilton, O.

The Green Dope (carnation coloring) men report heavy sales all over the country. Tromey's Flower Shop's dope certainly does put the green on a white or an Enchantress carnation. Fred Gear's will do likewise, and as long as the dear public want green on St. Patrick's Day, why not give it to them? E. G. G.

CANADIAN NEWS

OTTAWA. Our great snowstorms and days of 20 to 30 degrees below zero are, I hope things of the past. We are now getting some grand sunny days, which put quite a change on the stock, and may do away with some of the split carnations. All varieties around here are suffering from this trouble, with the exception of Beacon and Lady Beautiful. Roses are now looking well, and will be in fine shape for Easter. Violets and sweet peas are very plentiful and the sale has kept up well. In roses it is all Killarney and Richmond; every one wants them. Billions stock has been extra good and has sold well. Golden Spur lately leading Von Sion. Freesias this year have been a very salable article.

Plants for Easter are now making us think and watch. Spiraeas were very small, but have started very even and strong, and, with some of us, will have to be kept very cool or the last two weeks before Easter will finish them up. There is some very fine stock of rhododendrons this year. Azaleas are well in hand, but lilies are very poor; the percentage of diseased and poor ones is enormous, longiflorum being the worst.

The Horticultural Society held its annual meeting and showed a balance in the treasury; the last year was the most successful one yet. The officers elected were E. I. Mopsted, president; Lieut. Col. White, first vice-president; J. H. Putnam, second vice-president, and J. Watson, treasurer and secretary. E.

TORONTO.—The late F. C. Miller of Bracondale, Ont., was the introducer of several chrysanthemums and carnations, raised by George Hollis, the well-known Canadian hybridizer, who for some years was employed by Mr. Miller. Among the chrysanthemums may be mentioned Timothy Eaton, a yellow variety, and a pale yellow of this selected by Mr. Miller, who for years grew thousands of blooms for the Canadian market. He was a keen business man and built up a large establishment, mostly devoted to the cultivation of plants for cut flowers, in which he was assisted by two of his sons, who are bright, active young men. T. M.

WINNIPEG, CAN.—The Winnipeg Florists' Association held a meeting on February 28. The first part of the evening was devoted to the business of the association, and was followed by a very pleasant social hour, light refreshments being provided by Mr. Stolper.

This association, whose aim it is to promote trade interests and social intercourse among its members, was formed on February 18, and the officers elected were: President, Mr. Butchart; vice-presidents, Mr. Stolper and Mr. Aikens; secretary, Mr. Birch; treasurer, Miss Siddie; corresponding secretary, Mrs. Kempster.

Portland, Me.

H. J. Davis of Deering Center is desirous of selling out, owing to ill health. He has been in business in the same place for over 20 years. In case he fails to find a suitable purchaser by next Summer he will take down the greenhouses and erect some new ones on another site further out, using the present site for residential property, it having all the desirable requirements.

E. J. Harmon is now out of the growing end of the business. He conducts a cut flower store on Congress street. The greenhouses, formerly operated by Mr. Harmon, have been secured by his brother-in-law, Niles Nelson.

The Portland Floral Company has been succeeded by John J. Boyle. Mr. Boyle has a store on Congress street, where a general line of cut flowers and decorative plants are handled. Besides this, Mr. Boyle does considerable landscape work and handles hardy stock in quantity.

L. C. Goddard has several well kept greenhouses at Deering Center, and grows a general line of greenhouse stock. He reports business as having been good the entire Winter. J. M.

NEW YORK.—Henry Nungesser & Company received this week by steamer Florida 631 bags of clover seed. High-grade clover seed continues scarce and prices keep soaring.

GERANIUMS

A. H. Trago, John Doyle, S. A. Nutt, Bertha de Pressily, Mad. Barney, \$2.50 per 100. Our choice of varieties in pink, red and white, \$2.00 per 100.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000

5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each.

This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the **Royal Horticultural Society of London** and the "Kill Cup" by the **Pennsylvania Horticultural Society** for the **most meritorious new plant introduced in 1907.**

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

THE WEEK'S WORK

Timme's Timely Teachings.

Alternantheras.

The rigidly formal style of flower bed construction is still finding admirers everywhere. The spectacular absurdity may be a thing of the past, but the so-called carpet bed is yet largely in evidence. Alternantheras by the many thousands of 2-inch plants must be grown annually to supply the demand. But they are good for many other purposes besides forming the greater part in the body of carpet beds. As a lining to walks and borders or an edging around flower beds the plants are often used, presenting a neater and more finished appearance than any of the few things florists are able to offer for just such purposes. Alternantheras are easily multiplied, there being several ways in which to provide amply for what may be needed during the coming bedding season, these plants being among the last to be set out. Old clumps, lifted and boxed last Fall, or cuttings struck at that time and also wintered in boxes, if not actually ruined by neglect, will now show a bright growth, every bit of which, if clipped off and inserted closely together in warm sand, will root, and after being potted up and grown on will again furnish a crop of cuttings to be rooted later. Should there be plenty of stock obtained in this manner, several of the rooted cuttings put into 2-inch pots will then be the quicker way of working up a goodly lot of nice, salable plants. Old stock plants may also be torn apart and the pieces potted up singly. Light, porous soil, kept moist, suits alternantheras, and a bench up near the glass, warmed from underneath, is the best place for

them, better than hotbeds or frames. The retail grower does well in keeping some of all varieties in stock, all colors being in demand; and if later on he can find time to grade his stock into first and second size, fixing the price accordingly, it will be to his interest and of advantage to those who must do the planting out.

Sweet Peas.

Indoor sweet peas, sown in January or February, are now coming along fast and need attention. When grown in shallow benches in the richest of compost, this to be of no greater depth than four inches, sweet peas are an easily managed by-crop in the early part of Spring, not the bothersome and unprofitable nuisance they frequently turned out to be under more indulgent methods of indoor culture as practiced formerly. Important details from now on in their treatment are thorough watering with intervals between of sufficiently long duration to permit the soil to become just dry enough to show the need of more water to prevent actual wilting of the vines, which, of course, should never occur. When buds appear it is time to keep the soil constantly moist, and at the least signs of diminution in the size of flowers or length of stems liquid feeding instead of pure water is resorted to in reasonably rich doses twice a week as a means of prolonging the picking of salable peas for several weeks. Ventilation, as long as firing is on and before the outside temperature has left the shivering point, must be handled with greatest care. Excessive fumigation, sometimes doing more harm to sweet peas than good, will then not be necessary in keeping the vines free of aphids. A weak dose of smoke is all-sufficient if sent through the house once or twice a week, nicotine or aphid punk being the stuff to use instead of raw tobacco stems for sweet peas.

Though it may seem early for any sort of outdoor gardening, it is not any too early for the grower of sweet peas to think of making his first sowings. If he has heeded the advice so often held forth, his sweet pea field will have been heavily manured, deeply dug and properly laid out last Fall, posts set and all in perfect readiness for immediate planting after but a day or two of thawing and drying three or four inches down. That is the time to sow sweet peas for first and best results in the open.

Azaleas.

The fact that *Azalea indica* may safely be forced in a high degree of heat is of little advantage to the grower whose azaleas are to be in bloom at Easter. On the other hand, their perfect willingness to remain inactive until now, if only kept cool enough, makes them easily managed Easter plants from now on. The only baffling point in their treatment as such is to thwart their over-readiness to break into next year's growth at the cost of this season's blossoms. The careful picking away with thumb and finger from around the swelling flower buds is the remedy, some of the varieties needing pretty close watching so as not to be too late in removing the fast advancing shoots, while some of the late sorts give no trouble in this respect. These latter should now be removed to warmer quarters. If kept in a temperature averaging 40 degrees at night and no great headway has as yet been made to justify fears of their coming too soon, a rise of from 10 to 15 degrees will likely suffice to bring them into bloom at the right time for Easter. Azaleas to be in best form need liberal spacing between plants and an occasional turning when perfecting their flowers.

Spiraeas.

All plants under forcing need great quantities of water, none more than hydrangeas and spiraeas. These latter are now showing buds, and if these spikes and the foliage below them are to attain highest perfection, there must then be no halt or hitch in their steadily progressing development, which would surely happen were we to let spiraeas suffer for the want of water, or, more correctly, for the want of sufficient water. The soil may appear to be moist, but this remnant of moisture is converted into the body of the plant in less than an hour on bright days, and watering, therefore, becomes now one of the duties not regulated by daily routine. Spiraeas from this date until flowered out will, more than any other plants under fore-

ORCHIDS

Largest Importers, Exporters, Growers and Hybridists in the world.
Sander, St. Albans, England
 and
 235 Broadway, Room 1, New York City

ORCHIDS

We are now booking orders for freshly imported orchids of all leading kinds to arrive during 1903, at greatly reduced prices. Write us for information as to kinds and prices.
 We have just received the following orchids: *Oncidium Tigrinum*, *O. Sarcoodes*, *O. Forbesii*, *Sophranilla grandiflora* and *coccinea*.
LAGER & HURRELL, Summit, N. J.

ORCHIDS

We shall receive this Spring large quantities of imported ORCHIDS, namely: *Cattleyas*, *Dendrobium*, *Oncidiums*, *Laelias*, *Vandas*, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.
Carrillo & Baldwin, Secaucus, N. J.

ALTERNANTHERAS

Strong rooted cuttings, red and yellow, 50c. per 100, or \$4.00 per 1000. *Brilliantissima*, 60c. per 100, or \$5.00 per 1000.
DAVIS BROS., Morrison, Ill.

ing, demonstrate the good derivable from judicious feeding. Manure water given every other day in about the same strength as fed to potted Easter roses, will show a marked effect and greatly improve the general appearance of spiraeas. Since they are not troubled by insects and tobacco fumes are apt to ruin their foliage, it is better not to expose them to smoke. From 50 to 55 degrees is high enough for spiraeas.

Vincas and Ivies.

In late years, at the close of every planting season, we found that, had we had more of both English ivies and trailing vincas, we could have sold them easily, and for various kinds of outdoor work we could have used them to advantage. Strange, is it not, that plants so useful, so rapidly propagated, so easily grown into fast selling stock and so steadfast in heat and cold, should ever become scarce, when nearly all else is almost always in oversupply? Although propagation so late as this will not increase the stock on hand for this season, it will result in good plants for next year, the vincas to be grown in the open field and the ivies to be shifted from small to larger pots and kept in open frames until Fall. Both of them are quite hardy and need not be housed until very late and can also be carried through the Winter in outdoor frames, if so desired.

Abutilons.

Bottom heat while it lasts and the spare room in the propagating sand, now gained by frequent clearings, should be utilized to the utmost in the rooting of cuttings of all such stock as no retail grower can afford to be without. This includes abutilons, a class of plants altogether too sparingly represented in what florists strive to have in stock for their current local trade. There is hardly any purpose for which some one variety of abutilon could not be used by florist or gardener. All are good and easily grown subjects for the greenhouse, most of them well-branched bush plants, with a few varieties among them of so rampant a growth as to render them fit for the covering of walls, posts and trellises, tireless yielders of fairly good cut material. Many of the varieties will do for Summer bedding as well, either as flowering plants for the border or as brightly variegated foliage plants in groups or as an edging to beds of taller kinds; while a few sorts, being of a trailing habit, and richly variegated, produce a fine effect when used in the filling of vases and boxes. Cuttings of all kinds, the semi-matured new growth, root readily at this time of year, and the treatment of abutilons in general differs but little from that of geraniums.

Asters.

It is now time to make the first sowings of China asters, early, mid-season and late varieties. Seed trays filled with ordinary, sandy, but doubtlessly sweet or fresh potting soil, and a light, airy house for the seedlings after they are up, will for a few weeks yet give entire satisfaction in the starting of asters. For later sowings and for the first batches after being once transplanted the mild hotbed and frame will prove the better place for all asters before being sold or planted out. Asters should be of good size, just beginning to show a bit of stem, when planted in the field, and this planting out should not be hurried, should not take place before the ground is somewhat warmed, mellow and, in short, in the proper condition for planting, and the asters by that time should be well hardened off, firm and unquestionably sound plants.

PREPARE FOR EASTER

Prosperity in Sight

Bear in mind we have been specialists in raising EASTER NOVELTIES for the past ten years

In Philadelphia there's a florist noted, Aschmann, his name, his plants beyond compare; To a sweet girl his heart is all devoted, Next rank his Araucarias, passing fair; When seen together they're a pair so charming—Brimful of beauty—both he cannot keep; So to his heart he'll hold his winsome darling, While you may have the Araucarias cheap.

Nephrolepis Bostoniensis, 8 in. pots, made up of three plants, as big as a washbub, \$1.25 to \$1.50; 7 in. pots, 75c. to \$1.00; 6 in. pots, 50c. to 5/2 in. pots, 20c. to 30c.

Kentia Lansteriana and Belmontiana, 4 in. pots, 2 to 2 1/2 in. high, 25c. to 3/4 in. 5/2 in. and 6 in. pots, bushy stocky plants, 50c. 50c. and 75c.

Latania Borbonica, 5 in., 30c. Cocos Weddelliana, 3 in. pots, 10-12-15 in. high, 1c.

Ficus Elastica or Rubber Plants, home grown and Belgium stock, 18-20 to 40 in., 5-5 1/2 to 6 in. pots, 25c., 35c. 40c., 50c., 60c. each; 7 in. pots, 75c.

Asparagus plumosus nanus, 4 in. pots, \$1.00 per 100 all bushy plants. Begonia Chambeau, sells at sight, 5/2 in. pots, 25c.

Begonia, new improved Erfordi, 4 in. strong, 20c. 2 1/2 in., 25c. each.

Cineraria Hyb. Grandiflora, best improved strain, 5 in., \$2.00 per 100, 6 in., \$3.00-\$4.00-\$5.00 per doz.; light for Easter, in bud, partly in bloom now, 4 in. pots, strong healthy plants, ready for 5 in. or 6 in. pots, to close them out, reduced to \$5.00 per 100.

Primula officinalis, in bloom, 5 1/2 in. pots, 25c. each.

Cyclamen giganteum, in bud and bloom, 4 in. pots, 20c. to 25c. each.

Hydrangea Otaka. This is the best pink variety, already in bud just right for Easter, 6 to 7 in. pots, 35c., 50c., 75c., \$1.00 each.

Easter Lilies, Japan Multiflorum, of our own importation, raised from best 10 in. bulbs obtainable. Have the finest lot this year we ever had any season, showing buds now; just right for Easter. Medium size, 10c. per bud for plants over five buds, and 12c. per bud for plants under five buds. About 5000 good plants to offer. Owing to fact that demand every year exceeds supply, kindly send order early as possible.

Spiraea Gladstone. We offer only large stock. Our own importation, 6-7 in. pots, in bud now, just right for Easter, 50c. to 75c. each.

Watch for "ad" of Hyacinths, Tulips and Daffodils, etc.

Please mention if plants are to be shipped with or without pots. All goods must travel at purchaser's risk. Cash with order, please.

WINONA

The True Pink Carnation for 1908.

A color that attracts attention.
Once seen, always wanted

Comes nearest to Flancee, but is a different type flower. Never Bursts—Every Calyx Perfect. Good, shapely, active growth. Blooms early and in quantity. A grand commercial variety. Give it a trial and compare the returns. We have a large stock, clean and healthy. Will guarantee every cutting to be first-class. Order now for early delivery. Price, \$12.00 per 100; \$100.00 per 1000. Larger lots, prices on application. With our additional glass we have more than doubled our stock of Carnation plants, and can fill orders for rooted cuttings to even better satisfaction than in past years.

THE NEW LIGHT PINK CARNATION MAY

You will find in this variety one which you will want to grow in large quantity after you give it a trial. It is one of the few varieties which come in early and keep continually at it until transplanting time. The color is better than Enchantress and the bloom is better than Fair Maid and it is freer than either of them.

We are now sending out fine, strong, well-rooted cuttings. Let's have your order now. \$12.00 per 100; \$100.00 per 1000.

Also other new and standard sorts. All the best varieties at current prices. Our stock is in prime condition.

BAUR & SMITH

Carnations at Cornell.

The Horticultural Department of Cornell University held its fourth annual carnation exhibition, March 4-6. The exhibits were in charge of the students in floriculture, who managed, staged, and judged the blooms. The show was purely for educational purposes and no prizes were offered. However, many growers took advantage of the opportunity to place their stock before a class of interested students.

The exhibition was well advertised about the university and city, and many visitors were present during the three days. After the exhibition the blooms were put to good use by the students, in packing demonstrations, design making, etc. At the weekly meeting of the horticultural club (Lazy Club), carnations were the subject of discussion. An interesting talk on carnation breeding was given by Dr. Webber, and the varieties from a commercial point of view were discussed by L. D. Batchelor.

Among the exhibitors were C. W. Ward, whose two winners at the Washington show, Mrs. C. W. Ward and Alma Ward, brought forth many expressions of admiration from the visitors. His President and Beacon varieties also showed excellent growing.

Richard Witterstaetter, Cincinnati, exhibited Afterglow, which showed itself to be one of the coming varieties. The excellent scarlet, Andrew Carnegie, was shown by the Chicago Carnation Company; the blooms were much admired.

F. R. Pierson Company, Tarrytown, N. Y., sent a very creditable exhibit of Variegated Lawson, Enchantress, Winsor, Beacon, and Red Lawson.

The Horticultural Department of New Hampshire College exhibited a very interesting lot of seedlings with their pedigrees attached; many of these give promise of becoming good commercial varieties.

John E. Haines, Bethlehem, Pa., had a fine lot of well-grown blooms. Among the most prominent were Pink Imperial and Imperial; his bright scarlet variety John E. Haines, White Perfection and light pink seedling No. 102, made an especially creditable showing.

Paul Thompson, Hartford, Conn., exhibited the yellow variety Neptune, which attracted a great deal of attention, being the only yellow variety present.

James D. Cockeroff, Northport, L. I., exhibited Harvard in excellent form.

Frank H. Kimberley, New Haven, Conn., staged an attractive vase of Enchantress and White Enchantress, also the violet Marie Louise.

Among the varieties exhibited by the Horticultural Department of Cornell were Harlowarden and Mrs. Thos. W. Lawson. W. J. A.

THE NEW CARNATION

Afterglow

Winner of the following prizes at the Washington Exhibition of the A. C. S. held last week:

The A. C. S. Silver Medal.

The S. A. F. Bronze Medal, for best 100 blooms of Lawson shade of pink.

The Silver Cup, offered by W. J. Vonderheide for the best 100 blooms of any variety to be disseminated in 1908.

Also awarded

GOLD MEDAL by the Rhode Island Horticultural Society at Providence, Nov., 1907. (Exhibited by Wm. Nicholson)

CRAIG SILVER CUP by the Pennsylvania Horticultural Society at Philadelphia, Nov., 1907. (Exhibited by Dailedouze Bros.)

FIRST PRIZE by the St. Louis Horticultural Society at St. Louis, Mo., Nov., 1907. (Exhibited by E. G. Hill Co.)

FIRST PRIZE by the State Florists' Association of Indiana at Indianapolis, Nov., 1907. (Exhibited by the Originator)

SCORED the highest number of points of any seedling exhibited at the Toronto Exhibition of the A. C. S., Jan., 1907, after arriving 24 hours late from Framingham, Mass.

ASIDE from these honors, the fact that it has been grown successfully wherever it has been tried, is the best proof of its commercial value. Orders now booked by the undersigned, to be filled in rotation, for well grown, well rooted cuttings at

\$2.00 per doz. \$12.00 per 100 \$100.00 per 1000.

REVIEW OF THE MARKET

NEW YORK The cut flower market is still in a very depressed state; roses, along with all other flowers, are now meeting with poorer demand, and prices are consequently decreasing. The greatest drop has been in American Beauty roses; specials of these can now be bought at from \$15 to \$20 per 100. For smaller lots 25c. each is at times realized, but very few sales are made at this figure. Bride, Bridesmaid and other roses are accumulating more than they have done at any time since the beginning of the year, and while prices quoted run anywhere from \$1 to \$6 per 100 according to the grade, averages will be necessarily low, as the main quantity has to be moved at figures which suit the speculator whenever a clearance is desired. Carnations are neither better nor worse than they have been for some weeks; we do not believe there are quite so many coming in, and prices remain just as low and daily clearances are out of the question.

Lily of the valley is not quite so plentiful as it has been for some time. There seems to be a slight diminution in the supply of narcissus both white and yellow; still, there are more coming in than can be moved at profitable prices. Violets continue plentiful and cheap, as also do sweet peas. There is a steady supply of lilies, prices of which run anywhere from 6c. to 10c. each. Snapdragon is in the market regularly, and a few gladiolus appear occasionally.

Bulbous flowers began to arrive from the South this week, which, with our already overstocked market, naturally made it more difficult to dispose of the local supply.

CHICAGO.—The market has gone from bad to worse, and business is about at the minimum. The local demand for cut flowers is extraordinarily light, and buying of the hand to mouth order. It is considered that the Lenten season has something to do with the situation, and the inference is probably right. Lent was not felt so much last season, as it came when there was a comparative scarcity of flowers. This year when many commodities are at the gut point the arrival of Lent is certainly noticeable in a general falling off in demand. The carnation situation is improved in that the heavy crop has passed, and supplies are now no greater than can be taken care of in a normal market, but with a poor demand there is almost as much sacrificing done to move stocks as has been the case in the past week or two. White varieties are perhaps the exception, as they are used largely in funeral work, and are in better demand although in line with the other sorts in price. Roses are in plenty, and move slowly, except in the higher grades. Bride hardly seem to be wanted at all. There is a lot of short to medium stock which has to be cleaned out at times under inducements. Long stemmed American Beauty continue scarce, and this scarcity will be on for a week or two yet. Killarney is coming nicely in crop, and there will no doubt be plenty of flowers in evidence for St. Patrick's Day requirements. Bulbous stock moves only with effort, and prices are shaved well at times to effect a clean-out. Large quantities of daffodils, narcissus, and hyacinths are daily arriving, but only the best of stock moves within the higher range of prices. Freesia does not seem to be greatly wanted and much stock goes to waste. Daisies are fairly plentiful and sell well when in good shape, some which are arriving in small boxes reach the counters in the best condition. Violets are in fair demand, but it is mainly for locally grown stock; not many New York violets are arriving, and most of the consignments are not in the best of condition.

J. H. P.

BOSTON.—Business continues much in the same condition as has prevailed for several weeks. All sorts of material are plentiful, and prices have not improved a great deal. American Beauty roses are not so much in demand as they were; values vary according to the length of stems, the better grades bringing 35c. and 40c. Richmond and Killarney sell fairly well at \$3 and \$4 per dozen for the best grades; Bride and Bridesmaid bring from \$2 to \$10. Carnations realize \$1 and \$2 for the general and \$2.50 and \$3 for the best grades. Lilies bring \$8 to \$12, bulbs, \$6 to \$10. Lily of the valley, \$1 to \$7; violets, 20c. and 60c.; tulips, \$1 and \$2; narcissus, \$1 and \$1.50; smilax, \$12 to \$15; admiral, 75c. to \$1.50; asparagus, 50c. per string and A. Springer, 50c. per bunch.

Do Not Order Your Easter Advertising Matter Until You Have Examined Our Original

EASTER Announcements

Successful Business cannot be obtained without special endeavor. One's own personal efforts need backing and the most helpful backer is WELL-DIRECTED ADVERTISING, carefully selected and freely used.

For those florists who cater to the EASTERTIDE TRADE, we have prepared six graceful and attractive designs which we offer at a price that appeals to the user of good printing. We furnish THESE EASTER ADVERTISING ATTRACTIONS in the shape of small oblong four-page folders, printed in the finest style and on the best heavy enamel paper, with the engraving covering the front page and the advertisement on the third page. A fine quality baronial envelope is included in the price.

Delivery is F. O. B. New York at the following prices:

100 Folders and 100 Envelopes.....	\$3.50
250 Folders and 250 Envelopes.....	6.00
500 Folders and 500 Envelopes.....	10.00
1000 Folders and 1000 Envelopes.....	18.00
Each additional 1000, at same order.....	15.00

On orders for 500 or over customer may select two or more styles without extra charge. If interested, send at once for a sample set of these Announcements. They are original designs, made expressly for the season of 1908, and will interest you. It only costs one cent to look them over.

We expect lots of orders for these Announcements, so would advise you to act promptly if you wish yours filled in good time. Address

Special Easter Advertising literature made to order. Let us know what you want and we will be glad to quote you. Time is passing; write now.

INDIANAPOLIS.—The lion and the lamb are taking alternate stands, seemingly, in the flower business, as one or two days are rushed with orders, only to be followed by a period of unusual quiet. All in all, trade is more satisfactory than last month; counter trade, the best indicator of the retail flower world, particularly so. Department and other large concerns are arranging for their customary purchases for Spring openings. Carnations are sometimes disposed of by the thousands for that purpose. Bulbous stock overloads the market; the grower who maintains regular prices loses a quantity of it; the store man and grower relieves himself of it in various unprofitable ways. Carnations usually clean up at \$2 to \$3 per 100. Violets are scarce at no time, the price being 35c. to 50c. per 100. Killarney and Richmond roses are favored in the retail trade at \$1.50 to \$3 per dozen. Select Bride and Bridesmaid retail at \$1 to \$2 per dozen. A large portion of the American Beauty roses, long and short, are too bulb-headed to be fit for use. \$5 to \$35 per 100 is the price for them. Mignonette, daisies, snapdragon, heliotrope and forget-me-not make exquisite boxes of Spring flowers possible.

Flowering plants are in amazing profusion everywhere; sales are good, but a large margin of profit goes with the surplus.

Tomlinson Hall Market notes an improvement in trade. Retail and wholesale departments have been able to clean up better than during the previous weeks, even though prices suffered.

I. R.

ST. LOUIS. There was a great slump the past week in both retail and wholesale circles mostly caused by the falling off of social work, which is always scarce during the Lenten season; prices have fallen considerably for all grades of stock. Carnations are coming in in large lots and of fine quality, with fancy stock as low as \$1.50 to \$2 per 100, second grades \$7.50 per 1000, and common stock \$5 per 1000. Roses, too, are in greater supply than can be disposed of,

and fancy varieties are down to \$6 per 100; firsts and seconds, \$2 to \$3 per 100, and shorts, \$7.50 to \$10 per 1000. American Beauty in long fancy, are not over-plentiful, with a light demand; other grades in these are in plenty. Bulbous stock and violets are a great hit, and prices so low on most of this stock that it is impossible to quote them correctly. The green goods market, as usual, is in a healthy condition, with prices the same as formerly.

ST. PATRICK

PROVIDENCE, R. I.—For the past month trade has improved a great deal. Stock of all kinds has been plentiful and prices on the decline. Violets sell for 30c. per 100 wholesale. Carnations bring from \$2 to \$4 per 100. Callas and Harish lilies are coming in in quantities and average about \$1.50 per dozen. Sweet peas bring \$1 per 100. Bulbous stock is very abundant both in pans and cut, and the grower is taking what he can get for it in quantities.

Blooming and decorative plants are not moving very fast, but we hope to have a different story Easter week.

G. A. J.

NEW BEDFORD, MASS.—Not only the cut flower trade, but all other branches of business are very dull just now. There is a good supply of flowers on hand. Carnations retail at 50c. per dozen, a few firms selling at 35c. Violets are a drug on the market just now; 75c. and \$1 per hundred retail are the prices asked. There is plenty of bulbous stock; 50c. per dozen is the general price, some going at 35c. Funeral work is quite plentiful. We are having grand weather in this section and from indications it looks as if there will be a good crop of carnations and violets for Easter.

HORTICO.

CHATHAM, N. Y.—The Chatham Floral Company is to remove its large greenhouse on Fairview avenue to its plant above the Rutland tracks.

CUT FLOWERS FOR SALE

You can buy your Narcissus, Jonquils, Tulips, etc., direct from the largest growers in the South. For prices, etc., apply.

HUBERT BULB COMPANY, R. F. D. No. 2. PORTSMOUTH, VA. Gold Medalists, Jamestown, 1907.

FIRMS WHO ARE BUILDING.

LAFAYETTE, IND.—Herman Roth will add a large greenhouse to be devoted to the growing of roses.

CHANGES IN BUSINESS.

FARMINGTON, CONN.—Mrs. Hugh Chesney has sold her greenhouses, including her house on Canal street, to Joseph Haworth of Yonkers, N. Y. Mr. Haworth will continue the business.

BEAUMONT, TEX.—The Southeast Nursery Company, with a capital stock of \$6,000, has been chartered. Its incorporators are E. McMicken, J. W. Spurlock, T. A. Spurlock and A. Spurlock.

NEW LONDON, WIS.—The Olson greenhouses have secured a new location just south of the city. Their present quarters were entirely inadequate for their needs and with plenty of room they expect to make the growth of nursery stock and bulbs two important branches of their business. The 57 acres they have secured give them the needed room and the two greenhouses in use at present will be moved to the new site. Three additional buildings will also be erected.

Trade Notes.

As usual with the starting in of the Lenten season we notice a falling off in cut flower business. All the wholesale houses are loaded up with all kinds of stock; even American Beauty roses, which had been scarce, are now noticed in larger quantities. All written quotations on flowers are most misleading, as nearly everybody is glad to sell at any fair price offered.

Easter stock is now taking up all the attention of growers. We hear of many large losses in lilies, in some cases 50 to 60 per cent, being thrown out.

Preparations are now noticed for St. Patrick's Day; as usual Wm. K. Harris has thousands of pots and pans of shamrock (or rather trifolium) for this event, which are selling well.

The William Graham Company had a large decoration in Harrisburg on Tuesday, the event being a banquet given by Governor Stuart to the Supreme and Superior Court Judges. DAVID RUST.

Boston.

News Notes.

Kenyon G. Butterfield, president of the Massachusetts Agricultural College at Amherst, was the speaker at the meeting of the Massachusetts Horticultural Society on Saturday. His subject was "Agricultural Education in Schools" and although not much in a horticultural line there was a fairly good attendance.

Peirce Brothers' auto-truck has made its appearance mornings at the Flower Market to which it will make regular trips from the firm's large establishment at Waltham.

William Sim has just added nine more acres of land to his place for Summer production. He has a splendid crop of sweet peas at present, the principal varieties being Florence Renzer and Christmas Pink, each of which he cuts with stems averaging twenty inches, while many of them reach two feet.

Paul Rielwagen has a nice strain of antirrhinums which he brings daily to market in several fine colors.

T. J. Butterworth has many fine cat-tails still in bloom and has a nice lot of lily of the valley of which he forces many thousands at this season and for Easter.

Welch Brothers report shipping trade good to all parts of the New England and the Eastern States.

John McKenzie will add another greenhouse, 150 feet long, to his establishment at North Cambridge and will commence building in early Spring.

Mrs. Forbes, Aulandale, makes a specialty of growing English ivy leaves for which she has worked up quite a trade.

At the meeting of the Gardeners and Florists' Club on Tuesday next the subject for discussion will be "Roses"; W. H. Elliott, E. Holmes and other well-known rosarians will take part. J. W. DUNCAN.

PITTSFIELD, MASS.—Max R. Engelman, junior partner in the firm of R. Engelman & Son, has brought a bill in equity against his father through his attorneys, Green & Bennett of Springfield, asking that the partnership be dissolved and that a receiver be appointed. The local property of the firm has been attached in \$8,000. The bill of complaint states that Max and Richard Engelman have been in the florist business in Pittsfield; that they are now unable to agree, that Richard has undertaken to exclude Max from the management of the business, and that he possesses certain real estate exclusively in his own name which has been paid for in whole or in part with the firm's money. It is prayed that the partnership be dissolved; that a receiver be appointed to take temporary charge pending the appointment of a permanent receiver, to collect all money due the firm and take possession of all the firm's property. Also that Richard Engelman be ordered to turn over everything to the receiver; that he be enjoined from selling, transferring or assigning any of the firm's property; that all partnership property now in his name be reconveyed to the receiver, and that an accounting and balance be made between the partners.

The firm conducts a greenhouse on Elm street with a salesroom in the Miller building on North street.

Detroit.

Trade Notes.

Business is rather quiet with a correspondingly large surplus in all kinds of cut flowers. Azaleas, rhododendrons and lilies in pots are also plentiful. Very good carnations wholesale at from \$1 to \$1.50 per hundred and the retail prices range from 35c. to 75c. per dozen. A good deal of funeral work helps somewhat to reduce the stock on hand.

Mr. and Mrs. Philip Breitmeyer have gone on a short trip to Florida.

J. F. Sullivan is still very weak, following a severe attack of the grip.

Chicago.

Club Meeting.

The regular monthly meeting of the Chicago Florists' Club was held at the Union Hotel on Thursday evening, March 5. President Leonard Kill occupying the chair. An invitation to attend a lecture on trees by John T. Withers at the Academy of Sciences on March 7 was read. Mr. Withers in his letter offered to deliver the same lecture before the club, but it was not considered possible to arrange for it. The thanks of the club, however, were directed to be tendered to Mr. Withers for his kind offer. A. Aggerholm, Onarga, Ill.; Emil Pielke, Geneva, Ill.; H. C. Blewitt, Des Plaines, Ill.; R. Schiller, Chris. Peterson, John Michaelson and H. P. Prescott, Chicago, were nominated for membership; and the six candidates nominated at the last meeting were elected.

A letter from Secretary Hammond of the American Rose Society was read in which that gentleman said that the list of special prizes for award at the exhibition was greater than the list of last year. August Poehlmann spoke of the work done in connection with the preparations for the rose show.

The banquet committee reported progress and received further instructions from the club regarding the banquet to be given to the American Rose Society.

On motion of Mr. Poehlmann an amendment to the by-laws was agreed upon, changing the date of meeting from the second Thursday to the first Thursday in the month.

The meeting was the first held in the new quarters, and members expressed themselves as greatly pleased with the change. The action of the officers in making the change was approved at the meeting. After adjournment lunch was served, and the members lingered in conversation until a late hour.

News Notes.

John T. Withers, Jersey City, N. J., delivered a very interesting lecture at the Academy of Sciences on Saturday evening, March 7, on "The Value of the Tree and its Care." A large number of lantern slides were thrown upon the screen, showing trees in various stages of health and decay, and the lecture was listened to with much interest by the audience.

The banquet committee of the Chicago Florists' Club has completed arrangements for holding the club's banquet to the American Rose Society at the Union Hotel.

Peter Reinberg, at the Democratic primaries held last week, was again nominated for election to the Board of Aldermen of Chicago.

The rose show committee of the Chicago Florists' Club met on Monday and settled many details concerning the proper advertising of the exhibition and the issuance of tickets. The public is to be admitted in the afternoons for 25c, and in the evenings, from 5 to 10 o'clock for 50c. A special rate of 25c, will be made for florists' employees for the evening; and members of the Chicago Florists' Club and the Chicago Horticultural Society will be furnished with season tickets without charge. Sub-committees were appointed to look after all details.

Charles W. McKellar is installing a new refrigerating show case for his orchids, but has no trouble in the temporary storage of his stock. His arrivals of cattleyas are confined almost exclusively to C. Schroederae.

George Reinberg is receiving a few Cattleya Mossiae, with the other varieties of orchids from his greenhouse.

L. O. Kemble of Marshalltown, Ia., is a visitor this week.

J. H. PEPPER.

St. Louis.

News Notes.

The second annual Spring flower show of the St. Louis Horticultural Society opens Tuesday, March 10, for three days. The exhibition will be held in the large banquet hall of the Grand avenue Masonic Temple building. To-day (Monday) the members of the executive committee are busily engaged preparing the hall for the opening. Chairman Saunders of this committee reports that the entire list is largely made up of local florists, and the hall may prove too small for the exhibition. All are looking forward to a successful show.

W. C. Smith's mother left for Milwaukee the past week to be at the bedside of her sick daughter, Mrs. A. V. Hunkel, wife of M. Hunkel of Holton & Hunkel, wholesale florists.

Martin Moran has taken a position with the St. Louis Seed Company. He has for years been in the employ of Mrs. M. M. Ayers on Grand avenue.

Frank M. Ellis, formerly one of our wholesale commission men, writes that he will pay his St. Louis friends a visit in a few weeks, and that he has made a great success of his banana plantation in Panama. His family consisting of wife and two daughters still reside in St. Louis.

Henry Berning is receiving consignments daily of extra fine roses, carnations, bulbous stock and violets from his Kirkwood growers. Stock in all lines is abundant and prices low.

At Smith's, where violets are supreme, their consignments on Saturday were over 100,000; the fine Spring-like weather the past week brought them out in full force. Other seasonable stock is abundant at this house.

At Kuehn's, as at the other houses, stock is plentiful in all lines and grades. The specialties here are fine roses and carnations, with a good run of trade both local and shipping.

R. J. Windler and Conrad Bergestermann on South Grand avenue are showing a nice lot of extra fine blooming plants.

Edwin Loget, florist on King's Highway, received a "black hand" letter last week. Loget says he is not afraid and suspects it was sent as a joke.

J. E. Ammann's wife is reported very sick at her home in Edwardsville, Ill. This may prevent him from attending the club meeting and the Spring flower show. We extend our sympathy and hope for her speedy recovery.

George Kuhl, Pekin, Ill., reached town Monday morning and is calling on friends in the trade. Mr. Kuhl came to attend the opening of the Spring flower show, and we expect many other visitors.

The Florists' Club rose exhibition in conjunction with its regular monthly meeting promises to be largely attended on Thursday next. This will be the last meeting in the old hall, and a great many visitors are expected in the city to attend both exhibitions. The trustees are prepared to take charge of them and make things pleasant during their stay. Secretary Bentzen reports that he has received a number of answers from rose growers who will send exhibits, among them being the new roses Mrs. Jardine and My Maryland, which are being looked for with interest by our local rose growers, who will themselves make exhibits of standard varieties.

ST. PATRICK.

Indianapolis.

News Notes.

The State Florists' Association of Indiana at its monthly meeting completed arrangements for entertaining the American Carnation Society in 1909. The various committees were endorsed and provisions made for them to proceed as circumstances demanded. Messrs. E. G. Hill, Fred. Dorner, A. F. J. Baur, John Bertermann and others voiced the sentiment of those in attendance. Several worthy exhibits were staged, and awards made as follows: Special mention to R. Witherstatter, Sedansville, O., for vase of carnation Affordlow; honorable mention to Poehlmann Brothers Company, Chicago, for vase of Mrs. Potter Palmer rose; special mention to H. W. Riemann for pink seedling carnation, also for fine vase of orchid-flowered cyclamen. Carnation Shasta from Baur & Smith scored 85 points; the same exhibitors showed carnation May, which scored 80 points, the firm receiving also special mention for vase of seedlings, mostly white.

Heating.

Grocers' Problems Solved by U. G. Scollay.
Will a boiler with 45 feet of heating surface be large enough to heat two rooms in a dwelling house, each 16 feet square, and a greenhouse adjoining south side of house, 12x60 feet, two pipes, 1 1/4-inch, on each side of greenhouse and 150 square feet of radiation? Is 150 feet of radiation sufficient for the two rooms? The lowest temperature you need to figure on is 15 degrees above zero. F. Oregon.

—You do not state whether your boiler is a small upright tubular or a cast iron type. You do not mention whether for steam or hot water, in your heating system. If you mean hot water you have not sufficient surface in either structure; if you mean steam you have about enough for the greenhouse for 55 degrees, and rather more than necessary in the two rooms.

Assuming the boiler to be an upright tubular, it will have a capacity of about 250 square feet of radiating surface for steam, and 425 square feet for water. If you intend to use water, put in the greenhouse at least 500 feet of 1 1/4-inch pipe, but I prefer you to use heating surface of 2-inch pipe, and put in about 400 feet. The dimensions of the room are not given correctly as to exposure, glass, etc.; but for hot water I would approximate about 85 square feet in each room. Four 1 1/4-inch pipes will do for steam in the greenhouse, and radiation of about 50 square feet for each room. For a plant of this size I would recommend you to use hot water. U. G. SCOLLAY.

Consumption of Coal.
I would like an answer to the following: will give later the number of tons of coal I do consume for heating my plant; I have a six-section cast iron boiler, steam, rating 1000 square feet. I heat a nine room dwelling house to 65 degrees; a lean-to store, all glass, 14x34 feet, to 60 degrees; also a greenhouse, 19x33 feet, night temperature 50 degrees; day, 60 to 65 degrees, and a potting shed, 11x21 feet to 50 degrees. How much coal should I burn in a year? D. H. H.

New York.
—The particulars you send are not sufficient to allow anyone to inform you just how much coal you should burn. You do not give the dimensions of the rooms, or even send a sketch of the dwelling house, so that it is quite impossible to know how much surface would be required in the house. Your letter is not frank enough for me to give it all the attention that I ordinarily do, because you state that you will let me know later the amount of coal that you do consume. I do not care how much coal you burn; that would make no difference in my making a calculation as to how much you should burn, but your letter requests some authority to state how much you should burn, and it is not the intention of this paper to get into any controversy with outsiders regarding matters that may be in dispute. This may not be so, but I assume that it is, for there is no reason for you to state about letting me know later how much coal you do burn.

As your proposition is not strictly one that is devoted to the interests of the florists' trade, as to the main question of heating, I would suggest that you consult the makers of the boiler regarding this matter. U. G. SCOLLAY.

ANLO, O.—Elmer Leffel has completed a new furnace for his greenhouse establishment.

THE "JAPANA" Cut Flower Holder

A handy article for florists. Sells to the trade on sight. Made of glass in three sizes. The "Anglata" Table Decoration, something entirely new, long needed. The florist and housewife will appreciate this article, as it simplifies the art of table decorating. Ask for catalog.

New York.

News of the Week.

The Lenten season may perhaps not make any difference to the flower business in other cities, but certainly in New York it is having its effect, as the reduction of market prices testify.

The lecture on soils by Professor L. C. Corbett at the club meeting on Monday night proved a most interesting one, and was fully appreciated by all present. Soil is not such a dry subject after all when discussed by one who has made a careful study of it.

Professor Corbett's hearers certainly know more than they did about nematodes and club root, also the nodules that form on the roots of leguminous plants, and, without a doubt, much of the advice offered by the professor will be taken advantage of by growers who were present when they are making their compost heaps this year.

Ludovig Hendry, a brother-in-law of John Donaldson, the well-known florist of Elmhurst, L. I., died last week.

Samuel Burns of the Weathered Company returned last week from Virginia where he had been for some time on business.

The new location that William Elliott & Sons have secured for their seed and bulb business at 42 Vesey street is a most desirable one, and, as a long lease of the building has been obtained, the firm is to be congratulated. Of course, they will not move from their present location at 201 Fulton street until May, or perhaps one month later than that. Their auction season will open on Tuesday next (St. Patrick's Day) with a sale of roses, decorative and flowering plants, evergreens, bulbs, etc.

The general and ever-popular auctioneer, W. J. Elliott, will wield the hammer as has been his custom for many years, and with the choice line of goods that will be offered, together with his ever-increasing vocabulary, it goes without saying that this first sale of the season will be an event. These auction sales will be continued twice a week until the end of the Spring season.

Dr. J. M. W. Kitchen of East Orange, N. J., informs us that after a year's struggle with a foundry enigma he has succeeded in finding out how to cast iron patterns for sectional boilers without twisting or warping, which discovery means in time that new designs in boilers of greatly advanced economy and efficiency will eventually be on the market.

Dr. Kitchen has recently been allowed valuable patents on heating and power generating systems, and feels quite elated over his success in this line. He has been making a close study of heating apparatus for many years, and anything he can put on the market that will cut down florists' coal bills will be appreciated.

Hanf Brothers, who for many years have been located at Fifty-eighth street and Madison avenue, have moved to Sixty-second street and Madison avenue on the southwest corner.

E. V. Hallock, Floral Park, N. Y., was the recipient of some newspaper notoriety last week owing to his acting the Good Samaritan in the case of a traveler in distress. It seems that an Italian named Filomere, who had spent too much time in a saloon, on journeying homeward, fell and became partly unconscious. Mr. Hallock came upon the man as he had been lying all night, apparently dead, by the side of the road, and finding that he was still alive, Mr. Hallock procured from his house nearby hot water bags, blankets and pillows, and made the unconscious man as comfortable as possible. He then telephoned to the Jamaica police, who responded with a patrol wagon, and Filomere was taken to the St. Mary's Hospital, Jamaica, where he is recovering and will be out in a few days. Physicians assert that if it had not been for Mr. Hallock's prompt relief the man would have died.

The Holland-America steamship, Rotterdam, which was launched recently at Belfast and which will ply between European and American ports, is to have a palm garden, terrace garden, flower shop and every other convenience. We can easily understand what the palm garden will be like and the flower shop, as other steamships have already installed these accessories, but just where the terrace garden will be located, we are somewhat at a loss to conceive.

An elaborate birthday party was held at the home of Charles Weber, Lynbrook, L. I., the occasion being the birthday of Mrs. Weber. Many of the craft

News Items.

Timothy O'Connor has been confined to his home the past three weeks, but is expected out in a short time. Mr. O'Connor is almost 75 years of age, and has been one of the most active business men about here for the past 50 years. He has an up-to-date greenhouse plant on the Blackstone boulevard, which is superintended by his son William, and a very extensive salesroom on Westminster street, which is looked after by his son Timothy L.

Richard Higgins, in his sad bereavement through the loss of his wife, who was buried last Sunday, has the heart-felt sympathy of his many friends here.

John J. Keller, one of the oldest and best-known florists of Indianapolis, Ind., about forty years ago, died March 1, 1908, at the residence of his son, Thomas Keller, 650 Cranston street, Providence, R. I., with whom he had resided the past four years. Mr. Keller received a severe shock in a car accident here some two years ago from which he never fully recovered. He was thoroughly conversant with plants, trees, and shrubs of all kinds, and one of the most interesting men to talk with on such subjects.

John Macrae is about again, after another stage of the grip. This is the third time he has been confined to the house the past winter. G. A. J.

Washington, D. C.

Florists' Club Meeting.

The special feature of the regular monthly meeting of the Florists' Club, which was held on the evening of March 2, was the election of officers. There was an unusually large attendance. Following is the result of the election. For president, Fred. H. Kramer; vice-president, John Robertson; secretary, Charles McCauley (re-elected); treasurer, William P. Gude. Peter Bisset, the retiring president, was, with Chas. McCauley, unanimously elected to fill the board of directors, which is as follows: Peter Bisset, Charles McCauley, George C. Shaffer, William P. Gude and John Robertson. The committee on awards was unanimously re-elected; it is composed of John Robertson, Charles McCauley, J. R. Freeman, and George H. Cooke. Mr. Bisset's valedictory address was well received.

Several out-of-town guests were present, including W. P. Craig, Philadelphia, who had a large vase of Mrs. Jardine rose, which recently took the silver cup at Boston, for best rose to be disseminated this year. Mr. Bisset had several blooms of his new seedling "G. B." which has already scored 87 points; these were magnificent specimens, with stems close to four feet in length. F. H. Kramer had a large vase of Queen Beatrice which were likewise much admired. The awards committee took notes and will give their decision at next meeting.

Robert Ross Jones, Harrisburg, Penn., was also a guest. He represents the Marchand Steam Trap concern and gave the club a most interesting discourse on its workings and accomplishments. Mr. Jones showed several new electric lamps which are just about to enter the market in competition with the usual incandescent lamp, but which differ materially

in the matter of giving much more light, with less consumption of current; another great feature was that the light was white, and by it color values could be distinguished. Considerable interest was manifested by the members in both the trap and lamps.

Bradley Davis, foreman to F. H. Kramer, was admitted to membership.

The personal tax collector having been around looking over the beautiful silver trophies which the club's bowling team has won, naturally wanted to collect, and this gave rise to the question of ownership, and as to whether the club or the bowling team should pay the tax. It was decided that it be paid by the former. This tax, inaugurated a few years ago with its various inconsistencies, has proven a severe hardship to more than one of our fellow florists, and needs investigation.

The annual dinner of the club in honor of its new officials will be given the first Tuesday in April. The committee of arrangements consists of George H. Cooke, chairman, Z. D. Blackstone, and George C. Shaffer, W. P. Craig volunteered to see that a vase of Mrs. Jardine should adorn the banquet table. Votes of thanks were extended to Messrs. Kramer, Craig and Bisset for their exhibits.

Lent has caused a stagnation in business; stock is abundant and good in quality.

The ladies' auxiliary to the bowling team is distinguishing itself, the games on March 6 resulted as follows:

Mrs. George C. Shaffer...	79	110	113
Mrs. McCauley	110	117	114
Mrs. Geo. Cooke	107	133	104
Miss Cooke	102	108	123

JAS. L. CARRERY.

Club News.

The regular monthly meeting of the Florists' Club held last week was well attended. Four new members were proposed, one of whom was the well-known Holland bulb merchant, A. Colyn. The schedule of plants to be exhibited in competition by the private gardeners next year at our meetings was adopted. It was decided to keep our present meeting place for another year. The following were exhibitors: Blind Brothers showed azaleas and pans of tulips. J. Bader had a collection of palms, azaleas and ferns; H. Heim, azaleas and Baby Rambler roses. D. Fraser, gardener to H. Frick, showed fine primulas; N. C. Madsen, gardener to R. Boggs, a magnificent plant of Cineraria radiata which created quite a sensation. The Phipps Conservatories in Schenley Park had tulips, hyacinths, narcissus, cinerarias, crown imperial, etc. The North Side Park conservatories showed a nice lot of cinerarias. F. Bartsch floral callas, as did the South View Floral Company.

There was quite a discussion as to whether it pays to grow calla blooms for the commercial trade, which was much doubted by the majority present. J. Walker, Youngstown, O., stated that he thought they paid well for those who use them in their own business, but not for wholesale trade. The opinion was that the California roots sent here were all right the first year, but not of much account thereafter. Mr. Walker has a strain which he has grown for

some years that is excellent, producing many flowers somewhat smaller than the other sort, which is rather desirable.

The judges, John Walker and P. S. Randolph, made the following awards: For private gardeners, special mention to N. C. Madsen for well grown plants of Cineraria radiata; to D. Fraser for fine plants commercial size Primula obconica. H. Heim for evenly flowered azaleas and Baby Rambler roses first prize; Blind Brothers, second for azaleas and tulips in pans.

The next meeting's topic will be "Easter Plants and Flowers," with an exhibition.

B. L. Elliott and wife have returned from their trip to California. E. C. Ludwig and family are also home from their trip; they took in Mexico, Texas and New Orleans, and are all pleased and looking well after their two months' vacation. Quite a surprise was tendered to the family last Monday, the day after their arrival; many of their friends spent a most delightful evening at their home, and music, cards and a fine repast kept the party together till long after midnight.

Visitors during the week were J. Rölker, New York; S. S. Pennock, Philadelphia; A. Colyn of S. Colyn & Son, Voorhout, Holland, and John Walker, Youngstown, O.

Charles Erhart's father-in-law died suddenly here last week where he was on a visit; the body was taken to Cleveland, O., his home, for burial.

J. L. Wyland, the carnation grower, is serving on the jury for several weeks.

Business is still very unsatisfactory with lots of stock coming in. The growers are certainly up against it, never having experienced anything like this before. The weather is also most unfavorable—very wintry-like, with snow covering the ground. E. C. REINEMAN.

Los Angeles, Cal.

Trade Notes.

The trade conditions in this part of the State are sufficiently encouraging to warrant some of our growers enlarging their plants. Next month A. F. Borden will begin the erection of three substantial greenhouses, each 20x80 feet, which will give him a glass area of 50x80 feet. It is to be provided with a hot water system of heating. He has ordered from the East a hundred orchids as an experiment, and if successful with these will devote more space to these beautiful flowers which sell for \$1 per flower when brought to our market. Cattleyas are the only orchids I have ever seen on sale here.

Tom Wright is also thinking of adding another 200-foot house to his range. He has had exceptionally fine Mine, Abel Chateaux roses this season, which sold readily at \$5 per dozen. At Wright's I saw tulips brought from San Francisco that were pulled out of the flats and

One cent gets our catalog.
GIBLIN & CO., Utica, N. Y.

GREENHOUSE MATERIAL

should be bought at once if you expect to do any building this Spring. Glass is now very low and it's the chance of a lifetime to put up a greenhouse. You can get more for your money right now than you can next month. Don't wait. Don't hesitate or put it off; write to-day for your estimate and then get busy and order the material. This advertisement means nothing to the man who doesn't act—you must do something right away if you want to make money.

Our new catalog will be sent anywhere on request. Ask for one.

WILLIAM H. LUTTON
HORTICULTURAL ARCHITECT AND BUILDER
WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.
(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.
And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

The A. T. Stearns Lumber Co.
NEPONSET, Boston, Mass.

FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 12

NEW YORK AND CHICAGO, MARCH 21, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress

the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,

BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also

VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.

VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.

We can supply, also,

WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Vaughan's Asparagus Plumosus Nanus Seed

100 seeds 60c.; 250 seeds \$1.25; 500 seeds \$2.25; 1,000 seeds \$4.00; 5,000 seeds \$19.25; 10,000 seeds \$37.50.

S. & W. CO.'s FERTILIZED FLOWER POTS

For Growing and Shipping Plants

MADE of Extra Heavy Manila Waterproof Cardboard, Fertilized, Wire Stitched Seams, Perfect Drainage and Shipped Flat.

If you grow Tomatoes or Pot Plants you cannot afford to pass over this.

These square pots economize space, give more room to the roots than the tapering round pots.

In setting out plants the pots are not removed. Simply unlock the bottom flaps and turn them up (see cut), allowing the roots to grow down.

Size	Gross Weight Per 1000	Per 250	Per 1000
2 1/4 inch	about 30 lbs.	\$0.75	\$2.25
3 inch	about 40 lbs.	1.00	3.50
3 1/2 inch	about 50 lbs.	1.25	4.50

In setting out plants unlock the bottom, pull not up one inch, and you have a wall to protect the roots against Grubs and Worms.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

The bean crop of Illinois amounted in 1907 to 11,313 bushels, against 16,281 bushels in 1906.

GILROY, CAL. The California Seed Growers' Company, recently organized by Gilroy capitalists, will be under the management of Ah Him, who for the past thirty-two years has had charge of the field department of the C. C. Morse Company. H. M. Wolfe, the president, has one of the most productive orchards in the Santa Clara Valley. The company has purchased 85 acres of the Furlong place near Old Gilroy and rented the remainder of the ranch, comprising about 150 acres.

CLINTON, WIS.—The L. L. Olds Seed Company, whose establishment was destroyed by fire as recorded last week, has opened temporary headquarters in the Isham building on Main street to which the safe and office fixtures have been removed, as well as the records of the firm, which were saved from the flames. Among the merchandise destroyed were large quantities of field and garden seeds and 16,000 bushels of potatoes, the latter the firm's specialty. The loss, \$50,000, is partly covered by insurance.

STOCKS OF POTATOES. According to reports received from correspondents of the Bureau of Statistics during the latter part of February, about 20 per cent. of last year's potato crop, raised for market, remained in the hands of growers. Percentages of principal States are as follows: New England States, 43; New York, 31; Pennsylvania, 28; New Jersey, 13; Ohio, 25; Michigan, 29; Wisconsin, 31; Minnesota and Iowa, 28. The quantity of potatoes held in growers' hands is estimated at about 15 per cent. less than a year ago. The proportion of the potato crop raised for market held by dealers at interior points is estimated at about 7 per cent. The quantity of potatoes so held was about 15 per cent. less than the quantity so held at corresponding time last year.

IMPORTS OF SEEDS, ETC., March 10. — Hensel, Bruckmann & Lorbacher, two boxes seed; R. H. Ferry & Company, six bags flower seed; Vaughan's Seed Store, 31 cases trees; C. B. Richard & Company, seven cases trees; Livingston Seed Company, 17 cases trees; Vaughan's Seed Store, six cases plants; McHutchison & Company, 10 cases trees and shrubs; W. Elliott & Sons, five cases plants; R. E. An Evergreen Hedge Plant.

Kindly inform me through your valuable paper which is the best hedge to plant, that will keep green all Winter, also bushy from ground to top, as it is wanted to act as a screen.

New Jersey.

—There are many coniferous evergreens that are used for hedging, the Arbor vitae, Norway spruce, hemlock, etc., but we presume you are thinking of other evergreens. As you are near the sea coast at Island Heights you would find the *Euonymus japonicus* a good subject for your purpose perhaps the best of all—as it stands the sea air well, and needs comparatively little pruning when started with bushy plants. There are two privets you could use—the *Ligustrum japonicum* and *L. ovalifolium*. *L. japonicum* is a true evergreen, but the trouble is to find any nurseryman having a stock of it. *L. ovalifolium* is the common Californian privet. It is quite evergreen where severe frosts do not reach it; and your ocean air prevents freezings doing the damage they do farther inland.

The red cedar of New Jersey makes a good hedge when young, well-formed plants are used.

JOSEPH MEEHAN.

The Green and the White Ash.

Referring to some notes on the green and the white ash which appeared in *The Florists' Exchange* some time ago, Professor A. T. Erwin of Ames, Ia., writes in the *Iowa State Register* and says among other things:

"Concerning the comparative value of the white and green ash for this State the propagator who makes the mistake of selling the green for the white is doing his customers a kindness rather than harm. For the general planting here the green ash is much superior to the white. It is the hardier of the two and will succeed in more trying situations. In fact the green ash has but few equals in this regard.

"The distinction between the two species is clearly recognized by most of the propagators in this State, I think. In fact, many of them handle only the green form and sell it under that name."

As an avenue tree, for which purpose the ash is sometimes used, the green one is preferred, because it makes a less large tree than the white. Its drawback is the early shedding of its leaves. As a single specimen on a lawn the white ash is far superior; and for timber purposes the white alone is the one all planters ask for, and more than one seedsman here get into trouble furnishing the so-called white ash seed of Iowa which proves to be but the green. The "propagators" there may know the difference between the two kinds; the collectors did not up to a few years ago, but they may now.

Japanese Maples in Pots.

To those who have suburban homes the beauties of the Japanese maples are well known, but to the city dweller, unfamiliar with the lovely shrubs and trees to be seen on many lawns, the first sight of the Japanese maples, especially the blood-leaved one, is a revelation indeed. To such parties the florist and the nurseryman find a good sale for these maples grown in pots. The blood-leaved is the favorite, next to it the cut-leaved, blood-leaved one, hence these are the two of which the largest number should be potted, with lesser numbers of other admired kinds.

These maples show to the best advantage when grown a full season in advance of selling, for the reason that, as many know, the colors of the leaves are always stronger on an established plant than on one that has been recently disturbed at the root.

This is the proper time to pot them. Should the plants be in the ground they should be dug up as soon as the Winter is over, for these maples push into leaf quickly, and when in leaf, though they will live, with good care, there is the loss of a season's growth because of the check.

These maples do not make many fibrous roots, hence a few of what they have may be lost in digging, calling for a pruning of the plants when potting them. This, too, encourages fresh shoots, which gives more foliage, and, of course, greater display of whatever color it may be.

A word regarding color may be helpful to some. In the case of all blood-leaved plants the best colors come when the leaves get the full sun. There will be disappointment if the plants are grown in the shade; and do not fail to let a customer understand that a freshly potted or freshly planted blood-leaved shrub will not have as dark a color as it will after growing a year without any root disturbance.

Planting Evergreen Hedges.

Old-time writers gave the advice, almost without exception, to set out evergreen hedges when the new growth begins to show, and many of those of the present day follow with the same instruction. It has always seemed to the writer to be a case of one following the writing of another rather than supplying something experience had taught them. It suggests whether the nurseryman did not start the idea in the first place, to give him a chance of getting off his deciduous trees first, because many of them push into growth quickly.

Many shrubs and trees are in leaf nearly as soon as the frost leaves the ground, and these must be planted early. But experience shows that evergreens may be planted to advantage as soon as Winter is over, and that there is no necessity to wait until their growth starts. In fact, early planting is to be preferred, for the reason that the ground settles well about them and the plants are in fit condition to start into growth as soon as moist, warm weather comes, which is not the case with a late planted lot.

Evergreens usually have a mass of fibrous roots unless it be pines, which make but few, and this necessitates great care in getting the soil in close contact with the roots. Nothing accomplishes this contact so firmly as the use of sand for the first filling in about the roots. It permeates all small crevices at once; in addition to this it is better than soil for drawing forth fibrous roots; and in all transplantings the use of sand in this way cannot be too highly recommended.

they rarely, if ever, make a mass of fibrous roots, and at that time to have the taproot cut out.

Chinese Cork Tree.

The *Phellodendron amurense*, called the Chinese cork tree, but the one common in collection under the name is in no sense a corky tree. There is one known as Dr. Regel's variety, which is a true corkyarked tree, and which is, besides, well shaped, and one, too, that is famed for its golden yellow Autumn leaves. As the common one seeds freely and the seeds grow readily, while the corky ones in cultivation do not seed, the propagation of the latter has to be by budding on the common one, *amurense*. The corkyarked one is such a handsome tree that if better known it would be seen in all collections of trees.

The best method of grafting is to graft low down on the common stock, because as the corky trunk would be considered a great attraction as the tree got height and age, the corky one should commence its growth from near the ground.

It is optional whether to take the seedlings for stocks indoors in the Autumn, grafting them in Winter, or to graft them outside in Spring. Budding can be done in Midsummer, while the sap is still flowing.

Halesia Diptera.

Halesias are well named snowdrop trees, so closely do their flowers resemble those of the humble snowdrop of our gardens.

Halesia Diptera

There are two *halesias* native of our Southern States—*H. tetraptera* and *H. diptera*. Because of the latter named one growing farther south than the former it is known as the Southern snowdrop tree, although, as said, both are from the South. *H. tetraptera* grows from Virginia, south; *H. diptera* from Carolina to Florida. *Tetraptera* is the hardier of the two, but both are hardy at Philadelphia. That the most southern one, the one of our sketch—*H. diptera* is quite hardy here the accompanying illustration will prove, as the photograph from which the picture was made is of a thrifty young tree on the grounds of John T. Morris just outside of Philadelphia, in Montgomery County.

This species is distinguished from the more common one, *H. tetraptera*, in its bushier growth, its larger leaves and in its flowering later—a week or two. As the flowers of these snowdrop trees are greatly admired, it is a treat to have a continuance of their bloom when *H. diptera* follows the other.

Both *halesias* make trees, although, as in the case of magnolias, they are grown also as shrubs. There are trees of *H. tetraptera* in Philadelphia—30 feet high, and of *H. diptera*, the one our notes particularly refer to the late Professor Buckley mentioned a specimen in North Carolina the trunk of which measured 17 feet in circumference. While of a habit of growth more pleasing than *H. tetraptera*, our observation of its flowering leads us to prefer *tetraptera* in this respect; still, as said, the *diptera* coming into bloom after the other has passed, is greatly in its favor.

JOSEPH MEEHAN.

Getting Fibrous Roots to Walnuts and Hickories.

A writer in the *National Nurseryman* calls attention to his plan of placing wire mesh in the bottom of the row where he sets his pecan nuts, claiming that this insures fibrous roots, as when a root reaches the wire, it causes a rootlet to branch out, just as is often the case when a root strikes a stone. Just how the wire mesh is disentangled is not stated, but in the case of young trees with but slim roots it would not be a difficult task.

Many years ago, when the late A. S. Fuller wrote on horticultural subjects, he mentioned that hickories, walnuts and like nuts produced seedlings with fibrous roots when sown in poor and stony ground, rather than in rich, deep soil, and it is quite reasonable to suppose that this would be the case. It is a great deal in the favor of such seedlings to have them with fibrous roots, for all nurserymen know how very difficult it is to have the seedlings live when they have but a long tap root; and something in the way of the wire mesh spoken of would be well to use. When the seedlings have but a tap root

THE SCOTCH THISTLE.—Though the Scotch thistle is by no means a novelty when seen growing in fields and waste places, or such other natural habitat as it might prefer, it may be regarded as a novelty when seen in a nurseryman's catalogue, says the *Gardening World*, London. Seeds are being offered by a Scotch seed house. The flowers are described as purplish and handsome, a description with which everyone from the "land of brown heath and shaggy wood" will agree. It is stated to grow 5 feet high, but the height is largely determined by the situation in which it is growing. In an open, fully exposed field of very good firm land it may form a very robust bush while only 2 feet or 2½ feet in height. It is, nevertheless, a handsome plant, and it would be worth while giving it garden cultivation with the object of producing specimens of the finest stature and robustness. Surely, it is as deserving of this treatment as the exotic known as the cotton thistle (*Compositula thymifolia*), and sometimes, though erroneously, named Scotch thistle. The Scotch thistle, as mentioned by Burns is *Cirsium lanceolatum*, or *Cirsium flaberratum*, though by any other name it would look as well.

Seed Trade Report—Continued

European Notes.

The wintry conditions noted last week are gradually passing away, although in many parts of the country snow to a depth of twelve inches remains to protect the young seedlings from injury from frost. Plants of biennials liable to injury from the same cause are now in such a small compass that they cease to interest us.

Of cabbages only the late hardy varieties are left standing, and these are the least in demand; early varieties of the Allhead and Early Summer type, when they do stand with us, usually pay the grower for his labor, but they are too delicate to stand unprotected a Winter like the present.

Onion is the most interesting subject to the seed grower just now. The brisk demand for the giant yellow globe-shaped varieties continues and every ounce of seed will be cleared out before the sowing season is ended. The high prices asked for the seed are cheerfully paid, showing that a good article will always realize its full honest value if there be a demand. The slump in the flat yellow varieties persists, and a very big surplus of seed grown in western France will be carried over. The greatest caution will be necessary in buying seed of these varieties next year, as very little of the 1907 crop grows now more than 65 per cent. This means a 40 per cent. germination in the Spring of 1909.

This is the time when the larger purchases of the white Lisbon Winter onion are usually made, and buyers are somewhat astonished to find that the growers refuse to sell except at an advance of nearly 100 per cent. on the prices demanded in October last. The floods which prevailed in Provence, where the bulk of this seed is grown, for fully three months at the close of last year, have so seriously damaged the young plants that a total failure of crop seems to be inevitable. As the price kept on falling merchants refrained from making their purchases when growers were eager to sell and the growers will now be able to make a little profit, which they sorely need.

As the market gardeners in northern Europe sow about 60 pounds of seed per acre the doubling up of the price has a very serious aspect for them. The writer has heard that seed of this variety was sent to your side some years ago for White Portugal; it would not pay to repeat the experiment just now.

Quite an extensive trade is now doing in an intermediate parsnip known as the Offenham variety. It is much shorter and has a smaller core than the Jersey half-long; the flesh is thick, solid and sweet; its keeping qualities are of the best, and for cultivation on shallow soils it will easily supplant the Jersey and the coarse round turnip-shaped varieties.

A. W. Sutton, V. M. H., delivered a most important lecture on solanums before the Royal Horticultural Society, and a full report of the same appears in the current issue of the *Gardeners' Chronicle*. Those who are interested in potato culture will do well to consult the article in question; it is the most valuable contribution to the literature of the noble tuber which has ever appeared. Some of the new hybrid forms raised by the firm of Sutton & Sons will eventually find their way into commerce; the same is true of their valuable brassica crosses which have been before referred to.

In spite of the almost sunless weather during the past 15 days our primulas are setting their seed in excellent style. A visit to the principal growers reveals the fact that the Duchess type has failed to catch on and that the so-called blues are growing in popularity every year. The best dark variety is undoubtedly The Czar, while a pale blue form of the alba magnifica is the best light colored variety yet raised.

Cannell & Son are working on the P. stellata with splendid results.

EUROPEAN SEEDS.

NOTES FROM HOLLAND.—Now that the bulb beds have all been uncovered or at least their Winter covering has been thinned, the influence of last year's cold Summer and the very cold month of January shows itself by the very backward rate of growth of all sorts of bulbs. Only some of the earliest tulips are showing any growth above the ground and of the hyacinths very little is to be seen yet with the exception of those that have

Our Nineteenth Annual SPRING NUMBER

COMES OUT

NEXT SATURDAY

March 28

To be in time for that issue advertisements should reach us not later than Wednesday noon, March 25

THE FLORISTS' EXCHANGE

Box 1697, New York

been planted very early last season. However, this state of affairs is likely to prove more of an advantage than otherwise, as just this too early appearance of the first leaves causes in most seasons so much damage by their being caught in their weak state by the Spring frosts that are sure to come every season, and if only warm weather does prevail during April and May this will in every respect make up for the tardiness. Crocus are only just showing color and will not be in bloom until the middle of March; and from the present outlook even the narcissus are likely to be much later in bloom than usual.

Spring shipments are now in full swing and likely to clear all stocks on hand. Seedsmen are now at their busiest and are only handicapped by the unusual scarcity of many of the leading vegetable seeds.—Correspondent Horticultural Trade Journal, England.

AN ENGLISH VIEW OF RENAMING VARIETIES.—There has been a bit of a stir-up in America over the renaming of seed novelties, and I understand that the American Seed Trade Association will endeavor to make seedsmen see the error of their ways. Of course it is well known that the renaming trick is rife in this country, as well as on the Continent; in fact, a great deal more so than in America. Personally, I do not consider it creditable for one firm to seize upon another firm's speciality, and give it a new name. A great many so-called novelties, especially in the vegetable line, are but old sorts under new names. Of course, there are always a few small firms, with no reputation to speak of, ready to affix their name to anything worth handling; but I venture to say that more than one or two of the best firms are none too careful. Sometimes, of course, a firm will unknowingly rename a new break found among their own stocks, a break which may be identical to one sent out years before. Deliberate renaming is, however, quite a different thing; but at the same time I must confess that I see no antidote for it, other than the wholesome respect of one firm for another. An inventor is able to protect himself by patenting the result of his labors, but with plants and seeds the thing is impossible. The patent medicine man can register the name of his article, but that does not prevent another man analyzing the article, preparing a similar one, and giving it a new name. In the same way a seedsmen may register the name of his novelty, but it would give him no protection whatever. Horticultural Advertiser, Eng.

Blue Sweet Peas.

Editor Florists' Exchange:

In a review of Curtis's Book on Sweet Peas which appeared in the *Gardeners' Chronicle* of February 15, 1908, the reviewer said: "In the second edition * * * one or two inaccuracies call for correction. Blue sweet peas were in existence in 1838, and much earlier, though Mrs. Loudon noted them in that year." I therefore wrote the editor for further information on the subject, to which he courteously replied as follows: "The following passage occurs on page 130 of *The Ladies' Flower Garden of Ornamental Annuals*, published (by Mrs. Loudon, S. B. D.) in 1840. The blue, which has the wing and keel of a pale blue, and the standard of dark bluish purple."

Your readers will at once recognize this as identical with Commelin's description of the original variety sent to him by Cupani about 1699, as set out in my *History of Sweet Peas*, which appeared in *The Florists' Exchange* for 1898.

While on the subject of sweet peas I am pleased to report an addition of 140 members to the National Sweet Pea Society. The suggestion of a dollar membership for the United States and Canada which emanated from our worthy president, W. Cuthbertson, has been adopted by the executive committee and still further extended to include the whole of the civilized world. The fee will be \$1 for America and Canada, six shillings for other British colonies; four marks for Germany, five francs for France and five lire for Italy, and will entitle the member to all the privileges of the home subscribers.

I trust, Mr. Editor, you will give us the benefit of your powerful aid.

Although the older varieties are excluded, the trials now being conducted at Reading will be more numerous than last year. The floral committee will have a heavy task. The leading specialists in America will be well represented.

The trials of the Christmas-flowering varieties which are growing at Reading have not been a great success owing to unfavorable conditions prevailing in that town since November last. Burpee's Earliest White and Earliest of All were the only varieties to show bloom in December. Both the Teleny and Zvolanek strains will not be in bloom until the end of the present month, although buds have appeared on them for some weeks past.

Plant Notes.

VINCAS. There have been but few seasons within memory when one or more kinds of bedding plants were not in overproduction, but I have yet failed to perceive a surplus of well grown variegated vincas at the end of the bedding out season. Large plants with long trailing shoots, growing out of 4-inch pots, are largely picked up at good prices wherever hands can be laid on them. Cuttings of vincas put in now, or even a little later, potted up when rooted, and when established in their pots planted in good rich soil in an open frame or sheltered part of a field when the weather is warm enough, will make splendid plants by Fall. Those plants taken up on approach of cold weather and potted will, in Spring, be in such condition as to excite the envy of those who have use for such stock.

CROTONS. Young crotons propagated from cuttings during the Winter months will make very nice specimen plants in 5 or 6-inch pots by early Fall if they are looked after carefully. When the small plants are in an enclosed case the limitation of space invariably compels the grower to place the plants rather closer to each other than he otherwise would, although for the short time they are usually allowed to remain there no great damage results. When the plants are placed on benches in the open houses it will be well to allow them as much room as is consistent with safe and practical economy. A frequent moving and turning around of the plants is very beneficial in keeping them uniformly furnished, as well as helpful in keeping the surroundings sweet and free of injurious substances that come into existence very quickly under cover.

Specimen crotons from tops of large plants are easily obtainable and in a comparatively short time, but I doubt very much if the attempt to grow a large number of specimen plants by that method is likely to be more advantageous than the somewhat more lengthy process of growing from cuttings when everything in connection with both methods of procedure from beginning to end is considered. It is no doubt true that in rooted tops we may have plants fully as large when rooted and established in pots as would be possible from small cuttings in much less than a year, but counter to that, when conditions are favorable and facilities for propagation are right, five plants can be produced from cuttings and grown on for some time for every one possible by the other method. Notwithstanding this it may be good practice to top plants when some good specimens can in a short time be had in that way, and then use up all the cuttings that the old plants will later produce for thrifty quick growing plants by propagation in sand.

CYPERUS ALTERNIFOLIUS (umbrella plant) is an easily grown and useful subject for florists. Fairly large specimens are not at all difficult to get rid of at profitable prices. Small plants are very often found serviceable in filling pans in conjunction with other plants of more procumbent habit. Cyperus is readily propagated from cuttings made of the tops taken with about an inch of stem and inserted in sand in the propagating bench. When rooted and growth commences the young plants should be put in very small pots and if the work for which they are destined necessitates the roots being in small compass there will be no difficulty in keeping them within bounds for an indefinite period.

REX BEGONIAS. Among the very satisfactory plants for retail florists are rex begonias; small, medium, and large plants are sure to be of some use. When kept growing on and given generous treatment very handsome specimens are easily obtained.

CACTI. Many florists and others would surely grow cacti who have not heretofore done so if they would but take a moment to think how little the trouble or labor would be in producing quite a large and intensely interesting collection of these unique if not always useful plants from seed. Cacti are by no means devoid of attributes of satisfactory service to retail florists. Many of them that can be easily grown from seed offered by reliable dealers would be found very useful for window decoration, and many more could be used to advantage in outdoor planting in Summer when the desire is expressed for effects not easily produced with plants common-

ly grown. No one who has ever raised cacti from seed has had cause to regret having done so.

SINGLE CHRYSANTHEMUMS are hard to beat as subjects available for furnishing material for floral decoration while they are in bloom. The beautiful flowers of these plants are of such a pleasing character that growers who have been fortunate in having them in large quantities last year would not on any account be without them any more. No time should be lost in getting up a stock of these plants for cut flower purposes.

CENTAUREAS. When quick growing, light or variegated foliage plants are needed for outdoor work Centaureas candidissima and gymnocarpa will be found satisfactory in most cases. Seed of these sown now will produce good plants fit for planting out in May. D. M.

HARDY PLANT NOTES

Centaureas.

The genus centaurea is generally well known to all florists and gardeners through its containing several very useful and much employed members, both for decorative and flowering purposes.

But this genus is also noted as containing several very interesting herbaceous perennials, some of them flowering from early summer to late fall.

Among those found in many collections C. montana, or mountain blue, and its varieties are the most showy and useful and best adapted for cut flower purposes.

The coarsest and rankest growing member of this family is C. macrocephala (large-headed), the great golden knapweed, a native of the Caucasus.

Centaurea babylonica and C. glastifolia are two useful showy yellow free flowering kinds that give an abundance of blooms from July to September.

A close second to this variety, but a much stronger and rather coarser plant, is C. rubra, a native of Russia.

GRAFTED ROSES NOVELTIES

MRS. JARDINE, RHEA REID, QUEEN BEATRICE. The above, \$5.00 per doz., 50 plants for \$18.00, \$3.50 per 100.

NEW IMPORTATIONS OF Cycas Revoluta Stems

Arrived much earlier this season than usual and are in prime condition. If these are potted up at once many will produce crowns suitable for this Spring's sales.

We offer stems of all sizes weighing from 2 to 50 pounds each, at the following prices.

In lots of 100 pounds or under at 9c. per lb.

In lots of 250 pounds or over at 8c. per lb.

In lots of 500 pounds or over at 7c. per lb.

Send orders at once and secure some of this fine stock.

HENRY A. DREER, 714 Chestnut St., Philadelphia, Pa.

There are several other very useful members of this family, all of which have their own distinctive characters. C. hirta nigra variegata is a low growing form of merit with beautifully variegated yellow foliage.

All of these are perfectly hardy and all except the variegated leaved forms may be propagated from seeds or by division. Seeds may be sown in August or early Spring, and being somewhat large and free in germinating require no special skill in their manipulation.

COLEUS

Verschaffeltii, Golden Queen, Fire Brand, Lord Palmerston, Queen Victoria, Beckwith's Gem. Prices of Rooted Cuttings by express, 60c. per 100, \$5.00 per 1000. Less than 250 of a variety will be charged at the 100 rate.

Address, CHARLES BLACK, Hightstown, N. J.

removed to their permanent quarters. Or they may be sown in the open ground or frame in good open well-drained soil, kept free from weeds, and allowed to remain one year in the seed bed or row and thence removed to their permanent quarters.

They all may also be multiplied by division of the roots, either in the Fall or Spring, if large numbers are required. Most of them grow very freely from root cuttings made into lengths of from 3 to 4 inches and inserted in boxes of sandy soil until they commence to show signs of growth, when they may be potted up and planted as advised for seedlings. This method does not apply to those with variegated foliage, for, as a rule, nothing but green-leaved forms would result.

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each.

This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kitt Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

FERNS B. F. BARR & CO.

MY SPECIALTY

I have an immense stock of assorted ferns for Jardinieres, healthy and bushy, none better; in 15 of the best market varieties, including *Cyrtomium Falcatum*, *Aspidium Tennesmense*, *Pteris Wimsettii* and *Mayli*, in good proportion, from 2 1/4 in. pots, \$3.00 per 100; \$25.00 per 1000; 500 at 1000 rate.

CENTER PLANTS (Exact Size)

Kentia Belmoreana, 2 1/4 in., \$1.30 per doz., \$10.00 per 100.

Assorted Ferns, 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.

Adiantum Cuneatum, fine stock, 2 1/4 in., \$3.50 per 100, \$30.00 per 1000; 3 in., \$6.00 per 100, \$55.00 per 1000; 4 in., \$12.00 per 100, \$115.00 per 1000.

Adiantum Farleyense, 4 in., \$4.75 per doz., \$35.00 per 100; 5 in., \$8.50 per doz., \$65.00 per 100, 6 in., \$12.00 per doz.

THE WEEK'S WORK

Timme's Timely Teachings.

Azalea Mollis.

Of hardy azaleas suitable for indoor culture none proved more satisfactory last season than *Azalea mollis*. While *Azalea amona* and the Ghent or pontica varieties indeed deserve all the attention private gardeners feel inclined to bestow upon them, *Azalea mollis* is the true commercial sort. It can easily be had in bloom any time in March and even earlier, and if instead of that it is kept out of doors in a frame until then and forced out for the later Spring sales it never fails to do just what the grower expected it to do—unfold its golden blossoms and become the most charming of sprightly bush plants in all his collection at a time when such stock can most readily be disposed of. This makes this azalea an Easter plant par excellence, be that holiday early or late. Out in slightly protected frames the plants winter best, and even a solid freezing does not hurt them; and it is more for the sake of the pots than the plants that any protection at all is needed. Brought in, thawed out slowly and then put into a carnation house temperature it will take the azaleas from five to six weeks or under more severe forcing, if such is deemed necessary.

Pansies.

Unless sashes are opened wide or entirely removed on fine, sunny days, pansies in frames are likely to turn out anything but first quality stock for marketing or bedding. It is time to inure them to adverse in weather conditions sure to be met with the coming of Spring. In these days of increased sun heat the growing pansies under closed or insufficiently opened sashes undergo actual forcing—for the time being; this, if not followed up by a heavy covering at night or on cold days, is death to bedding pansies. Great heat as well as chest protectors are their sworn foes. It is quite a different thing in case the pansies were grown for the sole purpose of yielding flowers for cutting—a plan much to be preferred to greenhouse bench culture. Pansies intended for this particular line of floricultural industry are sown somewhat earlier than the bedding stock, so that when Winter sets in they already are pretty strong plants, firmly rooted in the richest of compost, with from 12 to 18 inches of headroom between them and the glass of the sashes, when closed. Very deep or high frames are best for the purpose. No encouragement for any farther growth of these pansies during Winter is given, but in early March the frames are banked on the outside with fresh horse manure up to where the sashes rest, and these, too, on cold nights are covered with mats or litter occasionally as need calls for. The treatment, in short, as declared to be disastrous to bedding pansies, is entirely correct in this case. The result is a continuous picking from now until the end of May of blooms, the largest ever held on stems 9 or 10 inches in length, stout and straight as a pencil.

Window Boxes.

It is well while speaking of pansies to remind the retail grower of how fast selling an article—a neat window box, or just a potter-made pan, any kind of plain or fancy receptacle, filled with flowering pansies, is, not only at Easter but throughout the months of Spring. Pansies above all else appeal to the ardent lovers of flowers, especially to those

unfortunates who have no gardens, dwellers in city flats and upper stories, a large class of every florist's cash customers. Sturdy plants from frames and the richest of soil should be used in the filling of these boxes. Pansies and, next to these, ferns or asparagus, hold out longest and give the best satisfaction for dwelling room and indoor adornment. For Easter much of the bulbous stock is also disposed of in this manner. This is a good time to make up all stock of this character, while the subject of vase and box filling for outdoor effects and Summer service can be discussed later, there being no need of the grower's mind or hand to busy themselves about work of this description until after Easter, it being taken for granted that ample stock for the purpose will, as usual, be in evidence on every place where orders of this kind are figured upon as a feature of the general Spring trade in plants.

Cytisus and Aecia.

Both cytisus and aecias are among the prettiest of yellow-flowering Easter plants. There was no trouble last year to have either of them just at their finest at the proper time, while this season's stock in this line seems to be determined to have its own way. Cytisus, or as it is more often called, genista, is not only hard to hold back, but is also one of the readiest plants to drop its blossoms, and its flowering season is one of the shortest, so that if but a week ahead of time, its beauty is gone and Easter must get along without it. This is likely to happen this year unless kept as cool as possible, safe from freezing, of course, and in the full light. A place like this also suits Aecia armata, the variety now mostly grown. But it differs in its treatment from genistas as likely to bring best results from now on, in that it needs for proper and uniform expansion of its bead-like blossoms a higher temperature, about 55 degrees, combined with a much drier atmosphere than suits most other hard-wooded species. Then to prevent discoloring and premature decay of blossoms, as soon as these show color, a removal of the aecias to their former cool and dry bench is the means of possibly carrying them along in good form until Easter; a shading on sunny days helps to lengthen the period of perfect bloom, but fresh air and sufficient water at their roots must not be withheld at any time after flowers have opened. Genistas are improved in appearance by liquid feeding, more so than aecias.

Geraniums.

The general run of bedding geraniums comprises at the most a dozen varieties, differing but slightly as to behavior under good culture up until now. Yet the difference between individual plants of any one of the varieties as to shapeliness and headway toward flowering is never more apparent than at the near approach of early Spring. A sorting out into at least two classes of stock at this time always pays. Those that now show three or more plump shoots and a 2-inch pot fairly alive with working roots, should be repotted into fours or fives to become prime stock for early sales. The greater number, however, will at this date show a less pleasing symmetry in growth, will need another, a last cutting back, to induce a more satisfactory break. To this end they are reset by themselves, are sparingly supplied with water for a week or so, but liberally with light and especially fresh air all along. By the middle of April they will be ready for the final shift into 4-inch pots and will root these through and come into bloom in good season for the Memorial Day and general plant trade.

Gloire de Lorraine Begonias.

Cuttings from stock plants of Begonia Gloire de Lorraine, rooted, repotted and given a chance to make an early new growth, will root more readily now while steadily held bottom and atmospheric heat and moisture are still at the command and proper control of the grower, than at the regular season of propagating this begonia by side growth, a month or two hence. We then make it our chief aim to work up sufficient stock merely for the filling of pans, baskets, etc., while the rooting of cuttings from early started plants at this time results in nearly as fine specimen begonias as the re-rooting of the young growths obtained by early leaf propagation. These latter and those taken off now should be potted up as soon as roots are forming, and be placed again in a pretty warm house and over bottom heat until established, any break in constant headway to be avoided as far as possible.

Gypsophilas, Stevias and Eupatoriums.

Of the several varieties of stevia and eupatorium deemed indispensable and therefore largely grown everywhere in years gone by, one after the other was dropped in the course of time, until now but one remains, Stevia serrata. Even this one is a stranger on many places and would probably also have entirely disappeared long ago had suburban and country florists, especially beginners, not been constantly reminded of its existence, its great value and its easy culture. Its great value is not manifest in the weekly returns from the wholesale commission house, but to the home decorator it is apparent. Like many another undeniably cheap plant it enhances the beauty, increases the price and helps to sell the more expensive stock. What Gypsophila paniculata is to the local florist in the Summer Stevia serrata is in the Fall and early Winter. Once accustomed to using either quite freely one misses them greatly when per chance run out of them. Gypsophila paniculata is propagated by division and can also be raised from seeds, by which method flowering material for next and subsequent seasons is obtained, the plants being fast spreading hardy perennials. Stevia serrata, on the other hand, is easily damaged by the slightest frosts, and although best grown into good bushes under open field culture should not be planted out too early or housed too late. The very coolest corner in the coolest greenhouse, with plenty of air and light, is the best place for stevia after being potted up in the Fall. It is propagated by cuttings, which root quickly at this time of year. If not in stock, retail growers should not hesitate in sending for it, and in doing so should include a few varieties of the old eupatorium, which thrive under the same mode of treatment; but, unlike stevia, which furnishes flowers in Fall and never later than Christmas, bloom throughout January and February.

THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, Novem-
ber 6 to 15, 1908. William F. Kasting, Buffalo,
N. Y., is chairman of the show committee.

NATIONAL FLOWER SHOW.

Premium List.

The preliminary premium list for the National Flower
Show, to be held in Chicago, November 6-15, 1908, has
now been issued. It is a most comprehensive one, em-
bracing some 26 pages. The special premiums are
enumerated under the respective divisions of the ex-
hibits for which they are offered; and they are quite
numerous. The list in general as well as the majority
of the specials have appeared in our columns from time
to time.

Copies of the preliminary premium list, as now pub-
lished, can be procured from J. H. Burdett, 1411 First
National Bank Building, Chicago, Ill. We advise all
intending exhibitors to secure a copy for their guidance
and information; they will find it a most interesting
document, the harbinger of what undoubtedly will be
the greatest horticultural exhibition this country has
ever seen.

The show is to be given under the auspices of the
S. A. F. O. H. in co-operation with the American Carna-
tion Society, the American Rose Society, the Chrys-
anthemum Society of America, the Illinois State Flor-
ists' Association, the Chicago Florists' Club and the
Horticultural Society of Chicago.

THE WHOLESALE FLOWERING CARNATION SOCIETY OF Eng-
land will hold its Spring show on April 1 in the Royal
Horticultural Hall, Vincent Square, London. Schedule
of prizes and exhibitors may be obtained from the
Hon. Secretary, Edward Watkins, Lucerne, Stubbington,
Farnham, Surrey.

American Rose Society.

On Wednesday, Thursday and Friday next, March 25,
26 and 27, 1908, will be held in Chicago the annual con-
vention and exhibition of the American Rose Society. Never
before in the history of this organization has a larger
list of special prizes (see page 343 of last week's issue)
been offered, and these, together with the general pre-
miums, which are likewise of a liberal character, should
be the means of bringing out the most extensive and
comprehensive exhibition of the queen of flowers ever
presented in this country.

The annual convention of the society should prove
equally interesting, as some valuable papers are to be
read and other important matters discussed. The sub-
jects to be dealt with by the various essayists include:
"Roses in Colorado," by J. A. Valentine, Denver;
"Proper Size of a Greenhouse for Commercial Rose
Growing," by William H. Elliott, Brighton, Mass.;
"Forcing Roses in Pots for Easter," by Robert Craig,
Philadelphia; "Rose Gardens," by W. A. Manda, South
Orange, N. J.; "Roses for Decorative Purposes," by
John F. Sullivan, Detroit; and a paper on "Soils," by
George A. Maynadier of the Department of Agriculture,
Washington, D. C. Then the proposition to publish a
"rose journal," which is meeting with general favor
from those concerned, will receive further consideration.

John J. Perry
Pres.-Elect Baltimore Gardeners' Club

We are pleased to note the enthusiasm evidenced in
this society and its work, both by the members of the
trade themselves and by outsiders who are lovers of the
rose. With the same energy continued, as has been
shown by the officers of the Rose Society, and especially
by Secretary Hammond, there is no reason whatever
why the organization should not take a foremost place
among the special societies of the country. The field
open to it is a more extensive one than is available to
any of the other organizations devoted to special flowers,
and the clientele to which it appeals is likewise larger
than that which either of its sister societies can com-
mand. The Rose Society has been fortunate, too, at
its later shows, in having the warm support of some of
the leading horticultural associations of the country and
the present exhibition is no exception to this condition
a fact to which the special prize list abundantly testi-
fies. The men engaged in securing new and valuable
varieties of roses, both by cross-fertilization at home and
importations from abroad, are appreciating the encourage-
ment given them; and at the Chicago show will be ex-
hibited probably the largest presentation of new things
in the rose line that American rosarians have yet wit-
nessed. This should draw out a representative
attendance, and every one intending to be present
should go to the meeting and exhibition imbued with
the desire to help along the good work by affiliating
themselves with the Rose Society, thus expressing in
this tangible manner their appreciation of the endeavors
of the association, and their practical interest in what
it stands for.

We hope, too, that the society will carry out the oft-
suggested holding of a Midsummer show of garden roses
for the encouragement of the amateur rose lover. It is
from this source that the greatest augmentation to the
ranks of the Rose Society can come; and it is surely
worth striving to secure. The latest report of the Na-

tional Rose Society of England shows a total member-
ship of 2,484, mostly, as we understand, composed of
amateurs. The motto of our own organization is "A
Rose for Every Home; a Bush for every Garden." If
then that motto means anything, is something more
than mere verbiage, and an earnest effort is made to
carry out fully the association's avowed aim, is there
any good reason why the membership of the American
Rose Society should not in time measure up to, or even
exceed, that of its English prototype? We ourselves can
think of none.

OUR READERS' VIEWS

The Rose Society's Show.

Editor Florists' Exchange:

I would like the privilege through the columns of your
paper of calling the attention of the rose growers in the
East, by that I mean the entire section of country east
of the Alleghenies, to the convention and exhibition of
the American Rose Society at Chicago March 25, 26, and
27. The supplementary premium list was published in
your paper last week, and I think all will agree that it
is a wonderful list, giving as it does about \$2,000, in
special prizes for roses, besides those offered to the regu-
lar classes by the Rose Society.

However, an attractive premium list, valuable as it
undoubtedly is, and necessary as well, is not all that is
required to ensure a successful exhibition. What is
necessary in addition is the enthusiastic and hearty co-
operation of the members of the craft, not only in the
immediate vicinity of Chicago; but Boston, New York,
Philadelphia, Cleveland, St. Louis, Milwaukee, and every
other rose growing center should vie with each other in
making this the finest exhibition of roses in the history
of the world.

I think there is no question but that the growers in
the Middle West will do their share in putting up ex-
hibits to the very best of their ability; but there is dan-
ger of the growers in the East leaving the question of
exhibits largely to our friends in the West, excusing
themselves on the ground of distance, etc. For this
reason I wish to urge, through your paper, at this time
that our friends in the East, who have covered them-
selves with glory at previous exhibitions of the society,
should enter into this show with the same enthusiasm
as they have done in the past.

With careful packing, taking care to secure the blooms
firmly to the bottom of the box, and a little chopped ice
sprinkled through the foliage, always provided the
blooms have been cut and stored for 24 hours previous
to packing, there is no reason why American Beauty,
Richmond, Killarney, and other roses should not travel
from Philadelphia, New York, or Boston, and arrive in
Chicago in very good condition.

The price of even very fine roses at the present time
is so low that we are not sacrificing very much finan-
cially if we send a few hundreds of our best blooms to
the show; and I again urge my friends in the East to
rally to the good cause, and stand by the officers of the
society in their determination to make this the best ex-
hibition ever given by this or any other society.

Clifton, N. J.

ROBERT STIMPSON,
President American Rose Society.

Seedsman and Plant Nomenclature.

Editor Florists' Exchange:

Relative to the action of the Wholesale Seedsman's
League as published in your issue of the 14th inst., it
is to be hoped that some righteous, open and above-
board course of procedure will be adopted by the seed
trade for the purpose of protecting everybody concerned.
There must be no "ifs" or "buts" about it; there must
be a square deal all around.

As The Florists' Exchange has wisely suggested, the
matter should be put into the hands of the Bureau of
Plant Industry of the United States Department of
Agriculture. The great majority of the men engaged
in the seed trade are so situated that they have neither
the time nor the facilities for conducting their own in-
vestigations. The Bureau of Plant Industry, however,
devotes itself to experiments and investigations; in fact,
one of its functions is to ascertain the merits and adapta-
bility of the various plants. And illustrative of the
confidence which is reposed in it by the seed trade, I
will refer to the Bureau's pamphlet on lettuces now
used for reference by seedsmen all over the country.
This same confidence would be reposed in the Govern-
ment in its decisions in regard to names of new varie-
ties.

If our cause be straight, fair and square, we need
never fear our Government. And here let me interject,
that the great majority of the seed fraternity heartily
welcome all pure seed laws which some of the States
are placing on their statute books in line with the pure
food law; and the seedsmen in general are also just as
anxious to be protected from "rotten" or "fake" varie-

Obituary

C. T. C. Deake.

Cyrus Towner Curtice Deake died at his home in Asheville, N. C., on Wednesday forenoon, March 11, 1908. He had been in feeble health for some time.

The Late Professor W. G. Johnson

Mr. Deake was born at Providence, Saratoga County, N. Y., December 5, 1824. When he was a year old his family moved to a farm near Mount Morris, Livingston County, N. Y. He spent his boyhood days there, attending a country school. Afterward he attended the old Bucks Academy at Nunda, N. Y. He graduated from this academy and taught school in that section of New York for several years. From here he went South and taught school in various localities. Soon after the beginning of the Civil War Mr. Deake went to Alabama in an engineering corps in charge of some nitre works of the Confederacy. During this stay in East Tennessee he read law, was admitted to the bar and began the practice of law at Jonesboro after the close of the war. He remained in Jonesboro until the Spring of 1871, when he went to Bakersville and in company with his nephew, J. W. C. Deake, went into the mica mining

The Late J. M. Gasser

business under the firm name of Deake & Deake. In 1875 he bought the Bakersville Independent, something of a religious paper, and converted it into the Roan Mountain Republican, of which he was editor. In 1879 he sold his mining property and devoted his time to the newspaper exclusively until the Summer of 1880 when he sold out and began the publication of the Asheville News. The publication of the Asheville News was kept up until 1884 when it was sold and Mr. Deake retired

to a farm and began truck raising. In 1884 he was in the florist business which afterwards became the Ells-wild Floral Company, composed of C. T. C. Deake, Mr. J. B. Deake and J. W. C. Deake. This business was maintained until two years ago when the greenhouse were lost.

Mr. Deake had been out of the public eye for some time. For years he presided over the downtown branch of the Ells-wild Floral Company greenhouses. He was a conversationalist of rare ability, a man who, although having passed the three score years and ten milestone, was endowed still with an active brain and a keen sense of humor. His reminiscences were instructive and delightful, his wit and humor pleasing. He was a friend to the children and many wee tots of Asheville have sported to school or to frolic a choice rose, a carnation or violet pinned to their dainty frocks by the trembling hand of this genial, kindly gray-haired, gray-bearded smiling friend. The members of the S. A. F. O. H. who were present at the Asheville convention, over which J. W. C. Deake presided, will remember the genial old man who has just passed away.

In 1855 he married Miss Josephine Simpson of Kingsport, Tenn., who survives him.

Willis G. Johnson.

Professor Willis Grant Johnson, one of the members of the editorial staff of the Orange-Judd Company, died last week at his home in New York of spinal meningitis. Professor Johnson was born at New Albany, O., July 1, 1866. He obtained his education through his own endeavors. He was a student in the preparatory department of the Ohio State University from 1884 to 1887; at Cornell University from 1889 to 1892, securing his degree of A. B. in the latter year. He was a post-graduate student in science, instructor in entomology, embryology and assistant registrar at the Leland-Stanford University of California from 1892 to 1894, receiving his degree of A. M. there. He was instructor in entomology at the University of Illinois, engaged in special work for the Illinois State Laboratory of National History and assistant State entomologist from 1894 to 1896. He was State entomologist of Maryland, professor of invertebrate zoology and entomologist of the Maryland Agricultural College, and entomologist of the Agricultural State Experiment Station from 1896 to 1900. Since the latter year he has been agricultural editor of the Orange-Judd Company publications.

Professor Johnson was an authority on fruit tree pests and a well-known writer and lecturer on this and kindred subjects. He was the author of a book on Fumigating Methods, which had an extensive sale, and editor of the Poultry Book, published by Doubleday, Page & Company. The deceased belonged to many organizations, among them the American Association for the Advancement of Science, the Society for the Promotion of Agricultural Science, the American Pomological Society, the American Association of Economic Entomologists, the Washington Biological Society, the Patrons of Husbandry, the New York State Dairymen's Association, the Phi Delta Theta of California, the New York Press Club and the Republican Club. He was for a short time a member of the New York Florists' Club, but resigned this year. When the office of assistant secretary of the Department of Agriculture, Washington, D. C., was vacant in 1904, Professor Johnson was an unsuccessful candidate.

Professor Johnson had long been closely identified with the agricultural interests of New York and neighboring States. He enjoyed a peculiarity wide acquaintance among horticultural and agricultural leaders, and will be mourned by all who had been brought in contact with his cheerful, whole-souled personality. He leaves a widow and two children.

J. M. Gasser.

Joseph M. Gasser, florist, Cleveland, O., died last week at Flint, Mich., where he went three months ago for treatment. Death was due to heart failure. He had been in failing health for some time.

Mr. Gasser was born in Switzerland 67 years ago and went to Cleveland when a mere boy. After some years' service in the post office he engaged in the florist business and when he retired, several years ago, he had accumulated more than \$500,000, according to report.

Three months ago Mr. Gasser was taken to Mr. Clemens for treatment and later removed to Flint, Mich. His wife had been with him for the past two or three weeks and was at his bedside at the time of his death.

For years Mr. Gasser was known as one of Cleveland's prominent florists. He conducted several retail stores, a growing plant on Lake avenue, Lakewood, and another in Rocky River.

Mr. Gasser is survived by his widow and a daughter, Mrs. J. C. Potter.

When in good health Mr. Gasser took an active interest in the affairs of the American Carnation Society, of which organization he was vice-president in 1898, also in the S. A. F. O. H., whose members died at the Cleveland convention he entertained at his home. He had been a member of the Knights of Pythias for many years.

ties, as they are to be protected against "rotten" or doubtful seeds.

If permitted to do so, I would amend the sixth resolution of the Wholesale Seedsmen's League by adding after the words "full description and source of origin," the following:

"And in case the introducer be not the originator or discoverer of the said variety, then he must present a certified statement from the originator or discoverer of the same, that the name under which it is to be registered is its true name and title, and that it is not known by any other."

SEEDSMAN.

The "Snowball" Hydrangea.

Editor Florists' Exchange:

The controversy going on in the columns of your paper in regard to the hydrangea, so called "Snowball," etc., has been read with amusing interest. We have known this plant for a good many years, and to ascertain how long it has been grown in our city we called on a lady and asked how long she had had her "Snowball" hydrangea. She replied, "Thirteen years"; and on inquiry if hers was the first, she said, "No; a Mrs. Garris had one before I did." On asking where she obtained her plant, she said it came from the South. There are a good many specimens growing in our city, and I call to mind one that was ten feet through last year, with a hundred or more blooms—a beautiful sight.

We do not know as to its value as a cut flower, as we have never tried it in water to cure it; but have seen the flowers cut and used, and wilt right down. For this reason we have not paid any attention to it for cut flower use; but for yard planting it is all right and very desirable.

It seems strange that the wise ones should be so wrought up over a plant that seems to have been in cultivation for so many years and at so many different places.

L. E. HIRTZ.

Madison, Ind.

CLUB AND SOCIETY DOINGS

THE BALTIMORE (MD.) GARDENERS' CLUB held its meeting, election of officers and annual banquet last week. The attendance was the largest ever recorded in the history of the club, nearly 150 members being present. The election for president was extremely close between J. J. Perry and Thomas Patterson, both very prominent members. Mr. Perry was elected to the office of president; George Morrison, vice-president; N. F. Flitton, corresponding secretary; George Talbott, financial secretary; Charles Wagner, librarian.

The question of holding a Spring show in conjunction with the National Sculpture exhibition has been revived and will be pushed.

C. L. S.

ELBERON (N. J.) HORTICULTURAL SOCIETY.—The regular meeting was held on March 9. President H. Wood in the chair. There was a large attendance. Mr. Collins, florist, South Elberon, read a very interesting paper on "Landscape Gardening." A lively discussion followed. David McFarlane, White Plains, N. Y., was awarded the prize for exhibits scoring the highest number of points during 1907. A. Bauer staged a very fine vase of stock Queen Alexandra, which scored 95 points; J. Kennedy had a vase of Dutch hyacinths, blue, remarkably fine spikes, which scored 85 points. Among the exhibits was noticed a well-grown specimen of a large, single-flowering pelargonium Kingswood, grown by A. Bauer; he received the society's certificate of merit. G. Masson tendered his resignation as secretary on account of his leaving to take another position. The society thanked him for his able services during his term, and A. Bauer was elected to serve as secretary for the balance of the year. After the meeting adjourned a social time was enjoyed, to which the ladies were also invited. The next meeting will be held March 23, when W. Robertson will read a paper on "How to Make a Vegetable Garden."

A. B.

CONNECTICUT HORTICULTURAL SOCIETY.—The regular meeting of this society was held in Bardeck Hall, New Britain, Conn., Friday, March 13. The society usually conducts its meetings in County Building, Hartford, but on this occasion the entire body were the guests of the New Britain members. President Huss read an exhaustive paper on the rose, tracing its history from the remote ages to the present day, and included valuable cultural remarks.

John Gerard gave an interesting address on the privileges of the amateur and emphasized the value of membership in a live society.

Mr. Lorenzen gave an exceedingly interesting account of his recent trip through Central America. Alexander Cumming, city forester, Hartford, read a paper on the "Arrangement and Care of Shrubs," and pointed out how largely a tastefully arranged shrubbery added to the value of property.

Mr. Shultz read an amusing paper, prepared by a New Britain schoolgirl, on "The Trials of the Amateur Gardener."

A. C.

AMERICAN ROSE SOCIETY

The Annual Meeting.

The Chicago men certainly have acted in the spirit which has made theirs the Imperial City of the West. The beautiful Blackstone Hall in the Art Institute is to welcome next week the treasures of the best rose cultivators of the nation. The exhibition will be opened on Wednesday, March 25, at 5 p. m. The first session of the annual meeting will be called at 7:30 p. m. sharp; the second session at 2:30 p. m. of the 26th, and a third meeting will follow.

The headquarters of the society will be the Stratford Hotel, opposite the Art Institute on Jackson boulevard.

President Simpson will open the meeting with an address. Papers or addresses will be presented by J. A. Valentine, Denver, on "Roses in Colorado"; W. A. Manda, South Orange, N. J., on "Rose Gardens"; George A. Maynardier of the Department of Agriculture, Washington, D. C., on "Soils"; Robert Craig, Philadelphia, on "Roses in Pots for Easter"; W. H. Elliott, Brighton, Mass., on "The Proper Size of Greenhouses for Commercial Purposes." J. E. Sullivan, Detroit, on "Roses for Decorative Purposes."

There have been offered, by Peter Reinberg of Chicago, special growers' prizes for the men who actually grew the flowers—first prize, \$25; second, \$15, and third, \$10. A sweepstake has been offered by the Horticultural Society of Chicago—a silver medal. A. L. Ham-

Benjamin Hammond, Secretary

dall Company, Chicago, offers a prize of \$10 as a second for Ivory; and there was omitted from the list printed in the trade papers a prize by H. F. Mitchell Company, seedsmen, Philadelphia, for the best display of 50 Kate Moulton—a silver vase, valued at \$25.

The ladies' vote prize is a feature which seems to have elicited considerable attention, as it calls for personal interest in the actual show.

There has been mailed to each member of the society the final list of special premiums; members' admission tickets and a copy of the program.

It is hoped that we may receive a substantial addition to the membership. A. P. Boudlog has sent his check for a life membership.

During the meetings the secretary will lay before the convention a number of the Rose Journal as a quarterly report. One-third of the members required to start the year have enrolled.

George A. ... acting manager of the exhibition.

BENJAMIN HAMMOND,

Fishkill-on-Hudson, N. Y. Secretary.

Robert Simpson, President

Soil and the Florist.

BY PROFESSOR L. C. CORBETT.

(Continued from page 376.)

A Specially Constructed Sterilizing Box.

The specially constructed sterilizing box is undoubtedly the most satisfactory system of soil sterilization. The boxes, of which there should be two, can be constructed of such size as to enable the operation of filling and emptying to go on simultaneously; that is, while one is being sterilized the other can be emptied and refilled so that while the soil in one box is becoming thoroughly cooked the other will be ready for the admission of the steam. In the construction of boxes different plans have been followed and those best suited to the particular conditions will of course be adopted by the grower. In general, however, a box 2½ feet deep, 6 feet wide, and 12 to 16 feet in length will be found satisfactory. The steam can be admitted either through drain tiles laid in the bottom of the box, or perhaps better through 1½-inch pipes perforated 6 inches apart, with 3/16-inch holes. The holes in the pipes should all be made along one side and in line and when the pipes are placed in the manifold from which the steam is to be drawn the orifices should all look down; the pipes being arranged at intervals sufficiently wide apart to admit of the use of a standard size shovel or spade between, and the rows about 1 or 1½ inch from the bottom of the box. The object in placing the holes downward is to prevent them becoming clogged by earth packed about the pipes.

August Pochlmann, Vice-President

The customary method of determining the point to which sterilization should be carried is to place a medium size potato in the surface two inches of the soil and when it has become cooked by the heating, the soil is considered to be sufficiently sterilized. It is found that high pressure steam is more effective than low pressure steam for this work and the conditions usually recommended are 40 to 60 pounds pressure, which gives a drier steam and does the cooking more rapidly than does low pressure. In order that the work of sterilization may be thoroughly effective it is necessary to observe certain precautions. These organisms are of a low order and like all low forms of life multiply very rapidly. It, therefore, requires but a small number of nematodes to be introduced into a bench or greenhouse to thoroughly infest the entire bench or house. If it is found that the plant is infested by these enemies the precaution should be taken not only to sterilize the growing soil, but the potting soil and the sand in the propagating bench, as well, should all be thoroughly sterilized. If any one of these steps is omitted it becomes an easy matter for the nematodes to be introduced either from the sand adhering to the roots of the plants when they are transferred from the propagating bench or through the soil used in the first handling before the rooted cuttings are finally transferred to the field or growing bench.

In the northern portion of the United States there is comparatively little danger of contamination from field-grown plants unless the field be mulched or manured with compost or soil which has been removed in the

Harry O. May, Treasurer

Spring from infested greenhouses. Soil which has been exposed to repeated freezing during the Winter months can be counted upon as free from nematodes. In most instances potting soil and growing soil can be rendered free from nematodes by careful precautions during the composting period. This requires that the soil be composted at least ten months in advance of the time it is to be used in the house so that it may remain in the open throughout the entire Winter and the heap be made broad, flat, and shallow enough so that the action of the frost shall penetrate throughout the whole heap. Under ordinary conditions, however, the heaps are not made so that frost action will extend from top to bottom of them. It is necessary in the latitude of this city (New York) to make compost heaps that are to be exposed in this way not more than 12 or 15 inches in depth and 10 inches would be better. There is an objection to this; if the heaps are exposed to the weather more leaching takes place than in deeper and more compact heaps, so that it is undoubtedly a wise plan to follow the customary system of composting to make sure of freedom from nematodes by the use of steam sterilization. This of course can be carried on quite economically in greenhouses heated by steam, but where a supplemental boiler must be provided in order to secure steam at proper pressure a very considerable item of expense will be incurred. There is, however, an added advantage in sterilizing the soil over that of mere freedom from nematodes, weeds, and disease germs, all of which, or a large percentage of which, are destroyed by sterilization. Sterilized soil when steam is employed has been observed to produce a more luxuriant growth than similar soil not so treated. The process of sterili-

zation seems to hasten the liberation of plant foods and to render the physical condition of the soil better than that not so treated. The application of moist heat at a high temperature has the effect of digesting a considerable portion of the organic matter in the soil, rendering it more suitable for the action of the bacteria and the assimilation of plant foods so liberated by the plant. This is perhaps of sufficient importance in greenhouse operations to justify the use of the sterilizer even under conditions known to be free from nematodes and other soil troubles.

From what has been said some of the intricate work involved in the transformation of the crude materials of the soil, of plants and animal products into available food for our crops, can be conceived. The natural processes are going on constantly, and man, by a thorough understanding of them, can in a way supplement them and increase their activity. In a great majority of cases the natural processes are beneficial. Only when they become excessive in some particular do they delay or interfere with the preparation and liberation of plant food. The grower should be on the alert to take advantage of every opportunity offered him to supplement and to stimulate the work of nature for his own benefit.

AMONG THE GROWERS

Poehlmann Brothers Company, Morton Grove, Ill.

Anyone wishing to see a thoroughly up-to-date greenhouse establishment would find a visit to the two plants of the Poehlmann Brothers Company at Morton Grove, Ill., both entertaining and profitable, for here is to be seen what is generally conceded to be the best equipped establishment of its kind in America. Though not the largest establishment, even in its own section, the glass area approximates a million square feet, an expanse which may very properly be considered enormous.

Morton Grove is about 15 miles from the city of Chicago, on the Chicago, Milwaukee and St. Paul Railroad. On arrival at the station a visitor has only to cross the railroad tracks to enter the greenhouses. It is better, however, to make for the roadway, when a short walk to the right will bring one to the main entrance to the establishment or rather the part of it known as Plant A, the entrance being in a substantial building recently erected, of which mention will be made later. From this building entry is had to the carnation range which comprises 14 houses, each 600 feet long, and which carries 165,000 plants in the benches, exclusive of stock in course of propagation. The varieties of carnations grown are Enchantress, White and Rose Pink Enchantress, Winsor, Victory, Beacon, Pink, White, and Variegated Lawson, White Perfection, Mabelle, and a few Foreador. The range is at present showing the effect of the recent very heavy cut, but the flowering appearance of the houses is excellent. Winsor is a variety very much liked; Victory is highly esteemed for its vigorous growth and constant flowering qualities, and just now is simply grand. Beacon is benched near Victory, looks exceedingly well, and has yielded very heavily. It

Robert Craig, Essayist

does wonderfully well here and is a favorite. Mrs. T. W. Lawson as seen here is all that could be desired, and does not seem to bear out the views of many other growers this season that it has outlived its usefulness. White Perfection is splendidly grown and is still yielding heavily.

Among a few new varieties under trial this season are Sarah Hill and Winona, which bid fair for extensive benching later. New houses approximating 30,000 square feet are to be added to the range this year.

A view across the range as expressed in a photograph necessarily fails to give an idea of its vast extent, but a view shown of the center crosswalk furnishes an idea of its magnitude, and at the same time shows the pipe system of heating. All the main pipes are covered with magnesia covering and are brass bound, presenting a wonderfully neat and clean appearance.

There are 22 houses of American Beauty roses, the houses running in length from 185 to 400 feet. Many of the houses now show what may be expected in the way of long-stemmed flowers from this time until Easter. The houses containing advanced stock show stems running 8 feet long, and many longer. A view of a house is here presented, showing the great uniformity of growth apparent in all the houses. Within the range of the visitor's eyes is evidence of the removal of the heavy

batch of cutting taken for propagation. A crop of 500 in fair crop from 2-year-old stock has pointed out a selected lot clearing out within a few days, before many more such a large part of the growing policy of the Poehlmann Brothers, no American Beauty took whatever being grown longer than three years. As an evidence of the heavy cutting from the Beauty section the record of the establishment show that last year from March 25 to May 1 the daily cut of long-stemmed flowers, 48 inches and over from one and two-year-old plants, ran from 2,000 to 3,000. There is a house of young American Beauty stock in 3 and 3 1/2 inch pots just potted from 2 inch, and showing a fine healthy rooting; 27,500 rooted cuttings have been potted up to this size already. A 100-foot house of American Beauty roses will be in full crop during the week of the meeting of the American Rose Society in Chicago.

There are three 27x180 foot houses of lilies, multi-florum and giganteum, all in the pink of condition. A daily cut of giganteums is taken from a bench in one of the houses. About 60,000 lily blooms are produced every year from these houses.

In one of the houses used for chrysanthemums is a grand bench of antirrhinum, pink and yellow, now in cut. The stems are long and erect with perfectly formed flower heads.

A house of Asparagus plumosus is a pleasing sight. This house is 50 feet wide, 180 feet long, 24 feet to the ridge. Smilax is also grown extensively in a side house.

A lean-to house is used continuously for forcing lily of the valley. This house furnishes throughout the year a cut which averages 1,500 sprays per day. Other small houses are used for forcing tulips, narcissus, daffodils, and other bulbous stock, and at this time are furnishing some splendid cut flowers.

Plant A is heated by a vacuum system of steam heat. The boiler house is equipped with 9 boilers running from 150 to 200 h. p. A siding at the rear of the boiler house provides for the delivery of coal at the doors, and the storage is so arranged that there is very little handling of the coal from the bins to the boilers. From 2,000 to 3,000 tons of coal are continually in stock. An excellent supply of water is obtained from three wells, the water being blown by compressed air from the wells instead of pumped. A view from the rear of the compressor house and pump room is here shown. In this building is also located the new electric plant, designed to furnish light and power for the establishment. The plant consists of two 230 kw. Thompson-Ryan generators and two McEwan engines. Pipe cutting and fitting is also done in this building, power being used from a water motor which was in use before the electric installation was made.

The handling of manure, hitherto quite a problem here, has recently been satisfactorily solved, and a system installed which reduces the cost to the minimum of economy. The supply of manure comes mainly from the Chicago stockyards, and can only be received in April, May, June and July, mainly on account of a shortage of cars at other seasons, also owing to the yards being frozen up in winter. The weather is usually

THE FLORISTS' EXCHANGE

warm during the receiving season, and the work of handling the manure is not much appreciated by laborers when other work is available. The system now in use, therefore, was in a measure a born necessity. A crib about 150 feet long has been erected along the railroad spur, to keep the manure off the track and behind which the embanks of manure are discharged. A small power house containing a Flory hoisting engine is located on the other side of the track from which wire cables 100 feet long are strung. On these cables are trolleys carrying huge forks. These forks will pick up from 800 to 1,000 pounds manure at a time. All the laborers have to do is to push the forks into the carload, signal the power house, when the fork load is carried to the dump behind the crib and discharged. This is done at the rate of one fork load per minute. The system has proved a big money saver, eliminating much of the handling necessary when the loads were discharged by hand. Three men now discharge a car at a cost, for labor and steam power, of about \$3 per car, 2½ cars per day. The investment represents an outlay of about \$800. The crib will accommodate about 100 carloads. A view presented herewith shows the system, with the tork and trolley at the left.

14 Plant B. at Pochlmann's.

7. New office and service building just completed by Pochlmann Brothers Company, Plant A.

A glass house accommodates the manure water manufacturing plant. A cement tank 20 feet long, 11 feet wide and 7 feet high is used for mixing purposes. The tank contains three divisions. Manure is emptied into the first chamber and boiled. The contents screen themselves into the middle chamber, whence they again are screened into the third chamber. Here they are well stirred and then allowed to screen into the service vat. The tank is lined with flooring boards, because boiling manure is found to eat out a cement structure. The main object in boiling the manure is to destroy seeds and germs. The service vat is kept well stirred, and a ball valve steam pump nearby distributes the manure water to any desired quarter. All sediment is used in the field for top dressing.

Mention has been made of a new building forming the entrance to the establishment. This is a one-story main structure, with a two-story building at the end for a foreman's residence. It is of pressed Pompeian brick, very substantial, and quite pleasing to the eye in contrast with its surroundings of glass.

Adjacent to the business end of the building is the villa residence of August Pochlmann. The building contains a handsome suite of offices, with separate entrance, commodious vault, an employees' recreation room with lavatory, with other lavatories and shower baths, all fitted with open plumbing of the highest grade.

No other florist's establishment within the writer's knowledge possesses facilities for the comfort of its employees as are to be noticed here.

In the shipping room is to be seen the cold storage quarters. These are quite extensive, and are in a building within a building. The installation comprises three

flower storage rooms, each 20 by 18 feet; each has a large calcium tank suspended in the center, with cold pipe coils on the walls. In these rooms a temperature as low as 15 degrees below zero can be obtained if required. The refrigerating plant is contained in a separate apartment and has an ice-making capacity of 25 tons per day, besides taking care of the refrigeration in the cold storage rooms. The plant is operated by electric power obtained from the electric plant before described, the power coming over wires strung on poles.

In addition to the flower rooms there is a special cold storage vault for lily of the valley pips, with a storage capacity of 1,250,000 pips. At the present time there are about 540,000 pips in this vault.

At the time of the writer's visit the hands in the packing room were busy preparing a large shipment of young rose stock for transportation to California. All the flowers cut at Plant A are handled in this shipping

room, whence they go to the company's wholesale house in Chicago, at 33 East Randolph street, in charge of John Pochlmann, and from there are reshipped to the numerous out-of-town customers, and distributed to the local trade.

Plant B, which is in charge of Adolph Pochlmann, who originated the business, is located but a short distance from Plant A. In this plant there are seven 250-foot and twenty-five 350-foot houses, all 27 feet wide. These form two sections, with a continuous passage through the center of each. The houses, with the exception of one or two, are devoted exclusively to the culture of roses, the stock including American Beauty, Pride, Bridesmaid, Minc, Abel Chatteray, Golden Gate, Uncle John, Perle des Jardins, Richmond, Cardinal, Killarney, and Mrs. Potter Palmer. Considerable space is used for the propagation of cuttings, about 200,000 plants being brought to the benching stage every year. This year more grafting has been done than heretofore, but the majority of the young stock is on its own roots. In one of the houses containing young stock is a batch of 3,000 young plants of the new rose Rhea Reid, just received from the disseminators. With the exception of the American Beauty the benched stock runs in age from one to eight years. It is believed here that color can be kept a little better with the older stock. Killarney is seen here grown to perfection; it is liberally benched and several of the benches show the plants with well budded stout stems, five feet tall and more. It is grown from both grafted and own root stock, and while the former is liked the latter seems to do as well. Mrs. Potter Palmer is grown quite extensively, and the company's faith in it increases daily. One house of it presents a particularly fine appearance, and is coming nicely into crop.

March 21, 1908

There is a fine house of *Adiantum Crenatum* and *concoloratum*, which furnishes a continual cut of fronds.

A novel method of cleaning rose benches has been put into practice here. Compressed air is piped along the center walk and connections are made with the benches. An operator with hose and nozzle can stand at one end of a run and blow all dead leaves from the stock and loose straw from the manure, collecting all at the end of the run by a curtain of canvas stretched at the point beyond which it is not desired to go. A very little time is required to do the work, and the appearance of the houses is wonderfully improved. Views presented herewith show the cleaning of a bench of *American Beauty* and the collection of the leaves by blowing over the plants and under the benches.

The ranges are heated by steam under a high pressure system through 5-inch mains for high and 10-inch mains for low pressure, the latter reducing again to 6-inch. Seven tubular boilers are used, two 200, two 150 and three 100 horse power. Water is obtained from wells, and at certain seasons an auxiliary supply is secured from the river adjacent. The water, as at Plant A, is drawn by the use of compressed air. The distance from the railroad precludes the use of a spur, consequently coal is brought to the storage quarters by wagon. A wagon drives under a platform and the coal is elevated in tubs by a hydraulic crane and placed on tracks which run at the top of the storage bin. This bin is about 155 feet long, 28 feet wide, and 15 feet high. It holds about 1,800 tons of coal when full, as it is now.

There is a commodious packing room from which all stock is shipped, the product of Plant B being all shipped independently of that from Plant A. Near the packing room is a 5-ton ice machine, operated by a steam engine, which furnishes a supply of ice as well as refrigeration for the storage rooms.

PAMPHLETS RECEIVED.

FOREST PLANTING IN VERMONT is the title of bulletin 132 issued by the Agricultural Experiment Station at Burlington, Vt. The white pine, either in pure plantation or mixed with hard woods such as the hard maple and white ash, is, it is said, the most promising tree for general planting in Vermont. Of the other coniferous trees the red pine, Scotch pine, Norway spruce, European larch, and "white cedar" (*Arbor vitae*) deserve attention. The common locust is recommended as the most promising tree to plant for growing stakes and fence posts; the only serious question is as to possible damage from the borer.

The State Nursery, "in compliance with the law," offers for sale a list of forest tree seedlings. White

seed is also offered. The bulletin states that the sales last Spring exceeded all work then available for distribution and the same amount of sale indicates a good condition for 1908. Arrangements are being contemplated by which the orders for stock of seed and seedlings of larger amounts than the State Nursery can supply are to be referred to commercial nurserymen. The instructions are given as to planting, starting trees from seeds, etc.

It will be seen that the State Nursery, "in compliance with the law," is doing a good business; and at the outset to the unfair competition it creates, it will

some consolation to the nursery trade to learn that, among others, orders for "larger amounts than the State Nursery can supply" are to be referred to commercial nurserymen.

It does seem anomalous that State Experiment Stations should engage in any commercial enterprise; and as the practice may in time become general, and to the detriment of a legitimate industry, nurserymen would do well to give the matter some attention, and take the steps necessary in the premises.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

DINNER TABLE DECORATIONS. A correspondent writes to me from Washington, D. C., asking what are the fashions in floral decorations for dinner tables on special festive occasions. As a few notes may be of interest to other readers of *The Florists' Exchange* I will answer through that medium.

In the first place I may state that some changes take place from year to year, yet one rule that has been followed for some time is the avoidance of a great mixture of different colors. Some particular color is selected. I think taking any one particular color pink has been the greatest favorite, and perhaps yellow of a bronzy shade comes next; but of course these two colors are never used in association with each other.

My correspondent has been informed that pelargoniums (geraniums) are extensively used. This is only partly correct. I have known the ivy-leaved Madame Croisse to be almost exclusively used for extensive decorations, and the soft pink has a very pretty effect. Some of the other soft shades are also in demand for the purpose. Recently when Sir Trevor Lawrence's son was married the bridesmaids carried bouquets consisting chiefly of flowers of zonal pelargoniums, the varieties being King of Denmark and Mrs. H. Cannell. These were the only flowers that could be found to match the dresses and other adornments. On the occasion of the marriage of Miss Botha (sister to General Botha of South African fame) the bride's bouquet was composed chiefly of South African heather, and Ornithogalum lacteum, the latter being imported from the Cape specially for the purpose, and after being cut for four weeks was found to have kept well, and lasted some weeks longer. R. F. Felton, who made the bouquets, tells me that he has kept the ornithogalum for fully ten weeks from the time it was cut. White heather, I may add, has come much into use for wedding bouquets.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

I have got a little away from table decorations; to return to the subject. Sweet peas were very popular last season, sometimes used in two colors. Miss Willmott and the Hon. Mrs. Kenyon formed a favorite blend where two colors were used. The Iceland poppies, in various shades, from pale yellow to deep orange, was one of the few mixtures that found favor. For many of the most important functions pink roses were exclusively used, the varieties Mrs. John Laing, Mme. Caroline Testout, La France, and Mrs. Sharman-Crawford.

Pink Malmaison carnations have been very popular and have often made from 9 to 12 shillings per dozen blooms. Of the American varieties Françoise and Winsor are favorite colors. Other colors, are, of course, used, but not so extensively.

Just now daffodils are much in demand. Yellow roses are often extensively employed, and, of course, the yellow and bronze chrysanthemums serve their turn. At the great exhibition last Autumn the judges showed such a decided preference for the arrangements composed of these colors, that the committee has deemed it advisable to make a separate class for any other colors.

I may here add that where other foliage is allowed, gypsophila, statice and Saponaria vicaria will also be admissible. These small flowers are now so generally used among large ones that many have been led into the error of using them when in competition, where it has been stated that any foliage but no other flowers should be used; and the exhibits have consequently been disqualified, much to the chagrin of the exhibitors.

The tall flower stands are now quite out of fashion, and very few pot plants are placed on tables. Most of the arrangements consist of long-stemmed flowers standing up in shallow bowls or short vases.

Several useful wire arrangements for holding the flowers in position are now on the market. "The Corona" flower holder has wires fixed in a heavy base. The flowers can be arranged in this before being placed in a bowl of water, and it can be lifted out when the water requires changing without disarranging the blooms. We also have tubes arranged in clusters to fit into bowls, and circular glass blocks about 1½ to 2 feet thick with numerous holes; these are hardly visible in glass bowls and hold the flowers in position well. They are known as "Japana" flower holders.

For flower show work most of the regular exhibitors have their own particular make of stands. Bamboo stands in various designs are popular. We also have some very neat pot stands for elevating plants. Those of the telescope pattern allow of the plants being adjusted at the exact height required without looking clumsy.

A St. Patrick's Day Window.

St. Patrick's Day is the topic for the window display at the retail flower store of H. R. Hughes, 690 West Van Buren street, Chicago, this week. The large scenic windows carry a design presenting a vista essentially Irish, with green flags upon which harp and shamrock are figured. In the foreground is the figure of a handsome Irish colleen playing a harp. All around and practically framing the vista is a painted setting of shamrocks, exaggerated in size, of course, but admirably adapting itself to the general scheme. In the four store windows, in line with the scenic windows, there is a pretty Spring garden setting, of hyacinths, tulips, daffodils, narcissus, primulas and flowering plants, cork bark being used for the borders of the flower beds.

St. Patrick's Day Window and Store Decoration by H. R. Hughes, Chicago

ROSES

Commercial Rose Growing.

Paper read by Eber Holmes, before Gardeners and Florists' Club of Boston, Tuesday, March 17, 1908.

Let us look for a moment at the rose growing industry twenty years ago that we may better appreciate the situation to-day. We had then such varieties as Papa Gontier, Bennett, Bon Silence, Safrano, Catherine Mermet and other good ones. It cannot be said that these have run out or have deteriorated; they have simply been superseded by better varieties. We had an illustration of this recently in the Safrano exhibited by Mr. Elliott at the Boston show. At that time also we had the old style house, 100 feet long and about 18 feet wide, with wooden walls and benches built up high to bring the plants up to the light. Now we build glass walls and keep the plants nearer the ground.

Factors Making for Improvement.

The question might naturally be asked, to what do you attribute the advance in the quality of roses produced to-day over those of that period? The reply is, first of all, the modern house. If I had to follow the rating given to flowers in the exhibitions, taking 100 as a total, I would give the modern house 40 points. The other 60 I would divide equally among the use of grafted stock, improved methods of growing, and new and better varieties in cultivation to-day.

The Best Style of House.

Taking these points in this order, What is the best house? And another question often asked is, What is the limit of size? We have a house 500x32 feet, even span, continuous ventilation at the top on both sides, containing five benches, which I like very much. It is a very easy house to build and maintain. The width could be increased to 34 or 36 feet at a slight additional cost, and the extra space obtained would be of great value for an extra bench or wider walks. It is an old saying that the best roses grow in the walks, for the more air and light the plants get the better the results.

We have another house 300x54 feet, which I like better, with the possible exception that it is not so easy to make repairs on a high roof as on a lower one. These large houses are easier to heat than the smaller ones. They catch every ray of sunlight in winter, fires can be banked earlier, and started up later than in the small houses. It is no experiment now, but it is a fact that with the larger body of air the temperature does not fluctuate as it does in a small house. We find that our large house runs even on cold nights, with less trouble than smaller ones. With ventilation at the top on both sides, and front ventilators hinged at the bottom so that the air strikes upward instead of directly on the plants, the temperature in warm weather can be controlled in spite of the long stretch of roof. It costs a little more proportionately to build the larger house, for it must be made stronger and braced to withstand any gale that may blow. The steeper the pitch, the greater the resistance, and the large houses are triumphs of the builder's skill.

I think that 60 feet is wide enough for any rose house. The only limits to the length are the size of the field and the purse of the builder. I believe that the largest houses produce the largest flowers, everything else being equal, and no man needs any better argument in favor of this type of house than the fact that men like Elliott and Montgomery, who are the most conservative, and at the same time the most progressive, rose growers we have, after years of experience with large houses, erect larger ones.

Grafting.

Our next consideration is the practice of grafting, so common now in the place of using own root plants. I cannot do better than recommend Montgomery's treatise on grafting to anyone wanting

the subject explained in a digestible manner. I might say, however, buy the best stock obtainable. As soon as received, we unpack and bury in a cold cellar away from frost, first a layer of loam, then one of stock until all are covered, taking it out as required for potting; or it can be heeled in in a cold greenhouse if there is room, and no cellar or shed is available. If you have no cold house in which to start the stock, clean out a part of the benches on the north side in the coldest part of your house and hang up burlap to keep out the sun, but not so as to exclude the air. Keep well damped down and syringed, being careful not to get the roots too wet.

The grafting case, also, if it has to be built in a rose house, should be on the north side or it will be difficult to keep the heat down as the season advances. Cheese cloth makes a good shade for the grafting case; and under these same conditions a cloudy day is to be preferred to a sunny one for this operation. We prefer standing up to a table about the height of a potting bench when grafting. It is as comfortable as the position you must assume when sitting down to this work, and a man can work faster when he does not have to keep changing his position. A good man will graft from 150 to 175 an hour. It is important that the grafts should not be allowed to wilt, but should be placed in the case as quickly as possible, which should be as

others tied down giving an abundance of magnificent flowers. All this goes to show that it is not so much how it is done, as who is doing it. The greatest discoveries of science and manufacturing are sometimes the result of an accident, and this is no less true of some secrets in rose growing to-day. The observant man, in addition to experimenting, will note every detail in the working of his place, and out of some misadventure or disaster to-day will possibly see the way to success later. All men make mistakes; the ones who make the least are the most successful.

There are laws governing plant life and growth which must be obeyed, but the man growing roses for profit, who can distinguish between the superfluous and fundamental, and produce good stock with economy, which is the key-note of commercial success, is well on his way to the top of the ladder.

Soil.

We have used loam for planting after being piled up one, and two years, and have also used it plowed and chopped up in the field one day, and in the house planted the next without any different results. I would, however, prefer four to six inches of sod rotted and chopped up with cow manure. If this has been put together the previous Fall, so much the better, for it is easier to plant in. On large places the old method of piling

It will take one or two men to pile up the plants and knock them out into flour, one with a wagon to cart to the house, where they are to be planted, a couple to dig holes, two good men to plant, and one at least to pound down. Six or eight men working well together will plant 1,000 young plants in a day if the beds are already prepared. In planting, it is well to grade the plants as they are set out of the flats, placing the larger ones in the back row and the smallest in the front. I would not leave too much dish around each plant, as with the frequent syringings necessary at this time, they collect too much water.

Replanting.

In replanting one year or older stock, we use no line or marker, but commence on one end of the house digging up, cleaning out old loam, throwing in new and resetting at one time. We do not like to do more of this than is necessary, for it takes five men a month to go through 10,000 square feet of bench and thoroughly overhaul it, and costs \$1,000. Three years seems to be about the limit of age for profit. It has been said that Richmond should be replanted every year; this is not necessary with us, and others report the same. A feature of Richmond is that while grafted stock makes a larger plant in the Fall, giving one or two crops before the own root plants come into bearing, in the middle of winter the self-rooted stock is livelier than the grafted, and will throw up long shoots from the bottom four to six weeks earlier than the grafted.

(To be continued)

The Illinois Self-Watering Flower Box
Illinois Heater & Mfg. Co., Makers.

air-tight as it can be made, and closed up at once. More plants are killed, perhaps, by improper treatment in the case than in any other way, and there is a good deal in knowing enough to let them alone for the first five days or so if the thermometer reads aright, and the plants look fresh and moist. If, however, the case should be too hot, or dry, or seem too full of moisture, I would not hesitate (with the ventilators in the house closed) to open the case for a few minutes and remedy the defect.

It is important to keep water out of the cut until it has healed thoroughly. We find when buying young stock of new varieties that we often get more than we pay for in the shape of red spider, etc. In this case we always dip small lots as soon as received in tobacco water, or syringe with whale oil soap to which a little nicotine has been added.

Planting.

In regard to the time of planting, I have seen roses successfully transplanted at any time of the year, the earlier the better for young stock. It is simply a question of money and convenience, and on large places the planting covers several months.

It is not necessary for two men to copy each other too closely for each to obtain good results. In fact, this may have been some men's undoing before this. When we find several kinds of loam in one field, what shall we expect in a country as large as this? Remarks written on watering are often misleading, for one soil will use up two or three times more water than another; so in other ways. Take Richmond for example. I have seen it cut down in the summer with splendid results, and thought that was the proper way to treat it after the first year. I have seen the plants left without pruning, standing to the top of the stakes, and also tied down, doing absolutely nothing. I have seen

up soil ahead has given place to the horses and disc harrow in the Spring. The large houses are easier to fill than the old style ones, where a man pushed a wheelbarrow 100 feet or more. A house up to 10 feet wide can easily be filled by removing glass or sash in the sides and driving teams alongside with the loam. Five or six men make a good gang for operating these houses when tilling. With two or three men outdoors loading and unloading the carts, and three or four inside, placing, treading and leveling, good progress will be made. Before tilling, all woodwork should be white-washed, or receive a dusting of air-slacked lime. We also use lime mixed with the soil for planting, and particularly in loam and manure for top dressing. It is a very good and cheap fertilizer and sweetener of the ground, and might be used a great deal more freely than it is.

Before commencing to plant, if the weather is hot, we use a light shade of whitening, syringed on the glass. It is cheap, quick to apply, good for the men and plants, while the work is being done, and can be washed off with the hose if rain does not come in time to take it off.

I do not like a line for planting young stock, as it is in the way and takes too long to move around. We use a marker made of light strips of wood with pegs fastened on. One man can handle it, or two men, one on either side, may work quicker. Being the same width as the bench boards it cannot get out of line, and the distance in the row is obtained by following the end mark every time it is moved. It will make twenty holes every time it is moved and enables a bed to be carried through at once. Team work comes in to good advantage in planting where it is important to transfer them quickly. A good man should be detailed to pick out the stock, for it is useless to waste time on poor plants.

A Self-Watering Flower Box.

Florists generally will be interested in the self-watering flower box which the Illinois Heater and Manufacturing Company, 3916 Wentworth avenue, Chicago, are offering. As the name implies, the box is provided with a self-watering device, which renders attention unnecessary, except at intervals of from ten to twenty days, according to the size of box and atmospheric conditions prevailing during the periods named. The box is made of heavy galvanized iron, pressed and corrugated at the seams, and so carefully soldered that leakage is absolutely impossible a fact which makes the box very desirable for use in the windows of flat buildings and apartment houses, doing away with the usual objections emanating from owners. The top edges are made extra strong by forming them in the shape of a hollow square, and then reinforcing the corners by a patented device. The box for window use is made with the front sloping outward and the back straight, so that it may be accommodated on any ordinary window sill, and a window screen may be raised or lowered without disturbance. It is provided with heavy brass eyelets, for easy and secure attachment in a required position.

The box is finished in a hard and durable enamel of dark green, but is finished in any other color when specially ordered, at a slight extra cost.

The operation is simple. A metal tube in the corner of a box extends from a water reservoir in the bottom upward through the soil to the top of the box. Through this tube water is poured into the reservoir underneath a false bottom (d in cut) which supports the soil. Inserted in holes in the false bottom are sponges (e, e, e) which touch the extreme bottom of the box and extend upward into the soil in which the flowers are planted. The water is drawn upward through these sponges in sufficient quantities to maintain a uniform moisture in the soil, and at the same time sufficient air is supplied with the water to insure to the plants a thrifty and healthy growth.

The box has been in use in different parts of the country for a season or two, and a large and growing business has already been built up. It has been the experience of users that the soil surface never becomes hardened or baked in the slightest degree, and in the construction of the box is a perfect application of the principle and advantage of sub-irrigation. The box is made in a variety of sizes for window use, and is also made in styles suitable for porches, and ornamental purposes. Hanging baskets, flower pots, and jardiniere pans are also made embodying the same principles. The box is a seasonable article, just now, and florists are recommended to write for the illustrated catalogue which the makers are sending out.

CLASSIFIED ADVERTISEMENTS

Cash with order.

PREPARE FOR EASTER

An immense stock of choice Easter Plants, blooming Easter week or earlier if desired, are now ready for immediate shipment.

Never mind about that nonsense hard time talk. Everybody wants plants for Easter. Wake up; open your eyes; success sure to come. Come and see our activity in shipping azaleas and other plants. Will you follow? Now is the time to order while our stock is large. All get served alike—the man who comes right here to the spot or the party who buys by mail. Don't forget, we have the best Azaleas and Lilies this year in the market, and no joke about it. Our reputation from Atlantic to Pacific in shipping Easter plants for the wholesale market the last twenty years is sufficient ground that we mean business, and have what we advertise.

Have Azalea India to beat the band. We take the lead in the American market for them. We never see a new one this year good foliage well leaved. We make a specialty of importing every year an immense stock of the choicest varieties popular in America, grown under contract for us by an azalea specialist in Ghent, Belgium. If you need azaleas, do not look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable for the American market, in medium sizes, full of buds, in good healthy condition, right for Easter.

All our azaleas are planted in 6 and 7 in. pots as soon as they arrive in October from Belgium. In justice to all our azalea buyers, we do not sell any in the Fall having the best picked out for Fall trade, but keep them all for Christmas and Easter orders. We have a whole house full of Mme. Van der Cruyssen (best double pink) that makes your mouth water, all as round as an apple, covered with buds, 50c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 and \$2.00 each. Next we have Simon Mardner (double pink), Veraneana (rose variegated double), Deutsche Perle (white), Niebe (double white), Bernard Andrew alba (double white), Prof. Wolters, Empress of India (double variegated), Apollo (red), and about 6 more varieties. Price: 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 and \$2.00 each. Only large sizes of Bernard Andrew alba, in 60c. size and upward, we can only supply Van der Cruyssen, Veraneana, Deutsche Perle and Simon Mardner; other varieties 75c., \$1.00, \$1.25, \$1.50 to \$2.00.

All goods must travel at purchaser's risk. To save express charges, please mention if plants are to be shipped in or out of pots, cash with order please. Strictly no return cases can be investigated in such busy shipping seasons.

Easter Lilies, for a Multi-bloomed variety, their buds to be in bud in a single day. Have you bought any yet?

Chloranthus Hyb. Grandiflora, the improved strain, \$2.00 per 100, 6 in. pots, \$4.00, \$5.00 per doz. Right for Easter. In bud, partly open, \$2.00 per doz. pots.

Hyacinths of my own importation, raised from the 1850s, early King of the Blues, Earl King, Giant Mastro, lavender blue, Gertrude, pink, La Grandis, white, 1 in. pots, \$12.00 per 100. My hyacinths cannot be compared with those raised from poor, cheap bulbs flooding the market.

Tounezel Tulips. This variety is the best double red and yellow variegated, and sells at sight. It is valuable because it will remain open in good condition for 10 days. Price: 3 in. pots, \$1.50 per doz.; 4 in. pots, \$2.00 per doz.

Van Zee Daffodils. This is the best double yellow narcissus on the market good yellow double nosed bulbs planted in 4 in. pots, 7, 5, 6 in. pots, price \$2.00, \$2.50 to \$3.00 per dozen pots.

Moon Vines, or the well-known Ipomoea Moltiflora, which produces flowers as big as a saucer, free bloomer, very fragrant, and for which I have a reputation as grower and shipper all over the country for the last twenty years, now ready, 2 1/2 in. pots, \$5.00 per 100.

Araucaria Robusta, Compacta, and Excelsa. A perfect model of nature. We are one of the best importers and growers of this beautiful decorative plant in the Aracaria. Price: 6 1/2 in. pots, 6 year old, 14 1/2 lbs., 28 to 40 in. in height, the same in width only \$1.00; 6 1/2 in. pots, 6 year old, 14 1/2 lbs., 25 to 28 in. in height, \$2.00 and \$2.50; 6 1/2 in. pots, 5 year old, 7-8 lbs., 18 to 25 in. in height, \$1.50 to \$1.75; Excelsa, 6 in. pots, 5 year old, 7 lbs., 22 to 25 in. in height, \$1.00; 6 in. pots, 1 1/2 years old, 1 1/2 lbs., 18 to 22 in. in height, 75c.; 2 year old, 1 1/2 lbs., nice little plants, 68 in. in height, 40c.; 2 1/2 in. pots, 3 to 4 lbs., \$1.00 in. in height, 40c. and 50c. each.

Ferns. Raised in pots, not lifted from benches. Nephrolepis Scottii, 6 in. pots, 50c. to 75c.; 7 in. pots, \$1.00 each.

Nephrolepis Piersoni, 5 1/2, 6 in. pots, 25c. to 50c.

Nephrolepis Bostoniensis, 8 in. pots, made up of three plants as big as a washpot, \$1.25 to \$1.50; 7 in. pots, 75c. to \$1.00; 6 in. pots, 50c. to 75c. in pots, 50c. to 75c.

Nephrolepis Whitmani, 8 in. pots, as big as a washpot, \$1.25 to \$1.50; 6 in. pots, 50c. to 75c.; 4 in. pots, 25c.

Ferns for Dishes, 3 in. pots, 7c. each. Amerpelli, the new fern, 5 1/2 in. pots, 50c. and 60c.

Kentia Fosteriana and Belmoreana, 4 in. pots, 8 to 20 in. high, 35c. to 50c.; 5 1/2 in. and 6 in. pots, bushy, stocky plants, 50c., 60c., and 75c.

Lantana Borbonica, 5 in. pots, 30c.

Coccoloba Weddelliana, 3 in. pots, 10 to 12 1/2 in. high, 35c.

Ficus Elastica or Rubber Plants, home grown and Belgium stock, 18 to 20 in. in height, 50c. to 6 in. pots, 25c., 35c., 40c., 50c., 60c., each; 7 in. pots, 75c.

Begonia Flambeau, sells at sight, 5 1/2 in. pots, 25c.

Begonia, new improved Erfordi, 1 in. strong 20c., 3 in. 25c. each.

Primula abconica, in bloom, 7 1/2 in. pots, 25c. each.

Cyclamen giganteum, in bud and bloom, 1 in. pots, 25c. to 35c. each.

Hydrangea Otakisa. This is the best pink variety, already in bud, just right for Easter, 6 to 7 in. pots, 25c., 50c., 75c., \$1.00 each.

Spirea Gladstone. We offer only large stock our own importation, 6 1/2 in. pots, in bud now, just right for Easter, 50c. to 75c. each.

GODFREY ASCHMANN

House of Cheerful Pink Rose, WYNDMOOR, that blooms Spring, Summer, Autumn and Winter. To be exhibited at the Chicago Rose Show, Grown by MYERS & SAMTMAN, CHESTNUT HILL, PA.

WINONA

The True Pink Carnation, for 1908.

A color that attracts attention.
Once seen, always wanted

Comes nearest to Flancee, but is a different type flower. Never Bursts—Every Calyx Perfect. Good, shapely, active growth. Blooms early and in quantity. A grand commercial variety. Give it a trial and compare the returns. We have a large stock, clean and healthy. Will guarantee every cutting to be first-class. Order now for early delivery. Price, \$12.00 per 100; \$100.00 per 1000. Larger lots, prices on application. With our additional glass we have more than doubled our stock our stock of Carnation plants, and can fill orders for rooted cuttings to even better satisfaction than in past years.

F. DORNER & SONS CO., Lafayette, Ind.

THE NEW LIGHT PINK CARNATION MAY

You will find in this variety one which you will want to grow in large quantity after you give it a trial. It is one of the few varieties when come in early and keep continually at it until transplanting time. The color is better than Enchantress and the bloom is better than Fair Maid and it is freer than either of them.

We are now seeding out fine strong, well-rooted cuttings. Let's have your order now. \$12.00 per 100; \$100.00 per 1000.

Also other new and standard sorts. All the best varieties at current prices. Our stock is in prime condition.

ANNOUNCEMENT

Our new seedling carnation TOREADOR will not be disseminated until January, 1909. For further particulars address

The H. Weber & Sons Co., OAKLAND, MD.

FIRES.

NORWOOD, R. I.—Early in the morning of Tuesday, March 3, fire completely destroyed the office and heating plant of the Norwood Floral Company's greenhouses on Pawtuxet avenue. An alarm was sounded on the church bell that brought out a large number of men with buckets and a few hand chemical extinguishers. The village has no fire apparatus. The fire had gained considerable headway before it was discovered. All that could be done by the volunteer firemen was to prevent the flames from spreading to the greenhouses adjoining the office on either side. The loss on the flowers will be heavy, as the heat and smoke killed most of the contents of the two houses. Two other houses that were out of danger from the fire are left without means to heat them.

Nathao D. Pierce, agent of the Norwood Floral Company, could not say what the loss would be. He had a large number of cut carnations ready for marketing; these were all destroyed. The loss on the building, which is owned by Louis D. Pierce, is about \$1,000.

It is not known how the fire originated, but it is thought to have started from the boiler leaking dry and becoming overheated, setting fire to the woodwork overhead.

ASBURY PARK, N. J.—John Bennett, a florist at Hillside, a small village just outside of Atlantic Highlands, escaped death Friday night, March 6, by a narrow margin. He was fighting a fire in his greenhouse plant and had just left the place when an explosion occurred that wrecked the buildings and shattered all that was fragile in the residence near at hand. It was in the basement, near the boiler room that the fire broke out. Over the boiler room is the office and in this was a box containing somewhat less than 50 pounds of dynamite, which Mr. Bennett had tried to use in work in a gravel pit and in uprooting stumps of trees. He had never been able to explode any of it and thought that it was worthless, so it was laid away in the office. He had forgotten about it and at the time the explosion occurred he thought it was the bursting of the boiler. The greenhouses are a total wreck. The loss, according to Mr. Bennett's computation, will be over \$5,000.

PROVIDENCE, R. I.—On Tuesday, March 10, a fire was discovered in the cellar of the florist establishment of T. F. Keller, 190 Mathewson street. The fire appeared to have started near the furnace. The damage to the store will amount to several hundred dollars.

CHICAGO.—On March 10, fire at the greenhouse plant of Jacob Phillips, Tonby and Northwestern avenues, did damage to the extent of \$10,000.

Cincinnati.

News Notes.

The past week has certainly been slow, until Saturday, the 14th inst., when it took a turn for the better and the wholesale men were enabled to unload a large quantity of stock to the street vendors. No use talking, they are a godsend at times and a nuisance at other times. It now looks as if the worst of the glut was over. St. Patrick's Day added a little stimulus to trade, and all carnations of March 16 were cleaned up, especially Enchantress and white, as both "green up" splendidly.

C. E. Weltz, Wilmington, O., and J. T. Hardegen, Aurora, Ind., were callers.

I was out at Eden Park Greenhouses with Superintendent Rodgers on the 11th inst., and must say I never before saw stock of all kinds in so good a condition. David Knott certainly is the right man in the right place. E. G. G.

Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

REVIEW OF THE MARKET

NEW YORK. The cut flower market shows no improvement over last week. In fact, the rose end of the business is a little worse...

CHICAGO.—The state of the market during the first half of the present week beggars description. Full counters and loaded iceboxes long after midday tell the story in a mute way.

BOSTON.—During the past week there has been very little change in business. Conditions are now more favorable than they have been.

INDIANAPOLIS, IND.—The result of a week's business in which funeral work, counter trade and decorating were equally divided, was satisfactory.

WASHINGTON, D. C.—But little can be said concerning the market. With the second week in Lent prices went down all along the lines.

WASHINGTON, D. C.—But little can be said concerning the market. With the second week in Lent prices went down all along the lines.

WASHINGTON, D. C.—But little can be said concerning the market. With the second week in Lent prices went down all along the lines.

ST. LOUIS.—Market conditions the past week can be called the "worst ever," and it seems that Lent has made itself felt this year.

ST. PATRICK. The market still contains much more stock than the demand is using up.

PHILADELPHIA.—The market still contains much more stock than the demand is using up. We give here a few quotations for the very choicest flowers.

BOSTON.—During the past week there has been very little change in business. Conditions are now more favorable than they have been.

NEW BEDFORD, MASS.—There has been a decided improvement in the cut flower trade the past week.

WASHINGTON, D. C.—But little can be said concerning the market. With the second week in Lent prices went down all along the lines.

DETROIT.—Counter trade is none too brisk, with stock more than enough, a good deal of it is sold by street vendors on Woodward avenue.

WEST MILAN, N. Y.—W. H. Yates contemplates building an addition to his violet house in the Spring.

MONTROSE, PA.—W. W. Nash, South View Gardens, is building an addition to his greenhouse plant.

HENDERSON, KY.—The Morgan Floral Company will begin operations at once on a new plant which will be modern in every respect.

FRANKLIN, MASS.—Walter Slade, florist, has sold his greenhouse to William Stewart of Mt. Vernon, N. Y.

LONG BRANCH, N. J.—Louis Sickler will establish a greenhouse at the corner of High street and Norwood avenue.

JANESVILLE, WIS.—Dr. C. G. Dwight will build three large greenhouses and enter the florist business.

YOUNGSTOWN, O.—John Walker will open a large retail store on West Federal street.

CONNELLSVILLE, PA.—R. Marshall, florist, Johnstown, Pa., has purchased two lots at Race street and Newmyer avenue.

WILKESBARRE, PA.—W. M. Eldridge & Company, florists of this city, who have maintained a business here for the past twenty-five years.

HAMPTON, VA.—The Curtis Floral Company has opened a downtown office and will occupy the south side of the store room in which Paatz's shoe store is located.

BANNERS ELK, N. C.—The firm of F. W. Richards & Company, dealers in galax, ferns, leucodoe sprays, etc., will in future be known as the North Carolina Evergreen Company.

WESTBORO, MASS.—A. O. Tufts and R. O. Stockbridge have purchased the greenhouses on the N. P. Brown place on Lyman street.

GRAND FORKS, N. D.—Superintendent E. C. Hilborn, of the Enderlin schools, formerly a student of the North Dakota university, is organizing a new nursery company.

Morris County (N. J.) Society. The meeting on March 11 was carnation night and it proved successful in every way.

The following awards were made: Carnation Bay State from A. Roper, Tewksbury, Mass., scored 90 points and got a certificate of merit.

Three vases of carnations from John E. Haines, Bethlehem, Pa., in the varieties Imperial, Pink Imperial and John E. Haines put up by O. A. Mills, Orange, N. J., were in excellent condition.

Harvard, from James D. Cockroft, Northport, L. I., scored 85 points and was awarded a certificate of merit.

May from Baur & Smith, Indianapolis, Ind., was awarded honorable mention. Afterglow from Dailedouze Brothers, Flatbush, L. I., was again shown in excellent condition.

Red seedling Number 1 and white seedling Number 2 from John Green, Morristown, N. J., the Judges would like to see each again in larger numbers.

Four vases of carnations from Florham Farms (A. Herrington, superintendent), in the following varieties, Beacon, Robert Craig, White Perfection and Eucharistess, were shown in excellent condition.

Vase of mixed roses from A. C. Van Gansbeek, Orange, N. J. (John Dervan, gardener), was a splendid exhibit, receiving a cultural certificate.

From Florham Farms other exhibits were as follows: Five vases of stock Queen Alexandra, shown in fine condition, a cultural certificate; one vase Anemone St. Bridget, several dishes of dwarf Erfurt cauliflower, and a vase of Cattleya Triana, showing some exceptionally fine types for which a cultural certificate was given.

Next meeting, April 8, will be rose night. John R. Mitchell will read an essay on the subject. Mr. Mitchell is well known as an able grower and anything he may say will be sure to carry weight with it.

BUSINESS DIFFICULTIES.

NEW YORK.—Alfred M. Van Praeg, dealer in cut flowers at 1297 Broadway, has filed a petition in bankruptcy, with liabilities of \$3,986 and nominal assets of \$985.

JACKSONVILLE, FLA.—On March 9 burglars entered the store of C. D. Miles, florist, but only secured about \$5 in silver, which had been left in the cash register.

LENOX, MASS.—John O'Brien, tree warden, who has been seriously ill at his West street home for some time, is in a serious condition.

CONSIGNMENTS OF CHOICE CUT FLOWERS SOLICITED. PROMPT PAYMENTS. GIVE US A TRIAL

(51) **Worms.** We have some rubbers in 7-inch pots, the surface of the soil being covered with tiny worms. Can you give us a remedy? A. A. H. New York.

—To get rid of the worms in the pots containing rubber plants, apply lime water. If the first watering does not kill them all, repeat in three or four days.

(52) **Violets in Frames.**—I intend growing some double violet plants outside in frames to flower next Fall and Winter. Kindly state the best method to proceed for outside violets and the time to start same; also, the most profitable varieties. A. A. H. New York

—To grow double violets in frames we would procure young stock in April or May and plant direct into the frames. Use four or five inches of good new soil, with about one-fifth well decomposed barnyard manure. Let the sash remain on the frames for a few days until the young plants are established (though air must be given each day), after which the sash must be removed entirely and only used again during protracted spells of wet weather, or on a night when frost is expected. The best variety is Marie Louise.

(53) **White Fly.** Please give a remedy for the white fly. We are troubled very badly with it on our fuchsias and heliotrope this season. We fumigate every week and also use several other remedies, but cannot kill the fly. Ontario. F. L. S.

—The white fly is a very troublesome pest when once established in a greenhouse, and the most persistent efforts are required to keep it in check. A very good remedy has been found by taking a pound of common laundry soap dissolved in eight gallons of water and spraying the plants, particularly the under sides of the leaves, washing off the soap again in a few days, repeating the remedy, if necessary.

(54) **Carnation Buds not Opening.** I send you samples of my carnation Genevieve Lord which I planted the last week in July and which have done very well until the new year. They are now loaded with buds, which will not open. I applied nitrate of soda about Thanksgiving and top dressing about New Year's (plain horse manure), treating them all alike. Victory, Governor Wilson and Mrs. Lawson are doing well yet. W. & D. New York.

Without a doubt it is on account of too much nitrate of soda having been used that the buds remain tight. We have seen this same trouble

Do Not Order Your Easter Advertising Matter Until You Have Examined Our Original

EASTER Announcements

Successful BUSINESS cannot be obtained without special endeavor. One's own personal efforts need backing and the most helpful backer is WELL-DIRECTED ADVERTISING, carefully selected and freely used.

For those florists who cater to the EASTERTIDE TRADE, we have prepared six graceful and attractive designs which we offer at a price that appeals to the user of good printing. We furnish THESE EASTER ADVERTISING ATTRACTIONS in the shape of small oblong four-page folders, printed in the finest style and on the best heavy enamel paper, with the engraving covering the front page and the advertisement on the third page. A fine quality baronial envelope is included in the price.

Delivery is F. O. B. New York at the following prices:

100 Folders and	100 Envelopes.....	\$3.50
250 Folders and	250 Envelopes.....	6.00
500 Folders and	500 Envelopes.....	10.00
1000 Folders and	1000 Envelopes.....	18.00
Each additional 1000,	at same order.....	15.00

On orders for 500 or over customer may select two or more styles without extra charge. If interested, send at once for a sample set of these Announcements. They are original designs, made expressly for the season of 1908, and will interest you. It only costs one cent to look them over.

We expect lots of orders for these Announcements, so would advise you to act promptly if you wish yours filled in good time. Address

☐ Special Easter Advertising literature made to order. Let us know what you want and we will be glad to quote you. Time is passing; write now.

arise from the use of nitrate before. It seems strange that all the other varieties mentioned are not affected in the same way, unless they did not receive such a liberal application of the fertilizer as did Genevieve Lord. We would advise cutting away all the buds that do not develop, and giving the bench an occasional watering with lime water. The next crop of buds will then most likely come along in good shape and develop all right.

New York.
News of the Week.
Secretary Young of the New York Florists' Club informs us that the old meeting room in the Grand Opera House Building, corner Twenty-third street and Eighth avenue, has again been secured as a meeting place, and the next gathering of the club will be held there. This will certainly be good news to the members, as the place at Thirty-fourth street and Third avenue has been a most uncomfortable one, particularly so on nights when the weather was cold. W. E. Marshall, chairman of the bowling club organized at the last Florists' Club meeting, wishes us to announce that a meeting is to be held at his store, 46 West Twenty-third street, at 7 p. m. Friday, and that bowling will be practiced every Friday evening at 8 o'clock in the Albin alleys, 117 West Twenty-third street. On Saturday last, March 14, a meeting of orchid growers and enthusiasts was held in the rooms of the American Institute, West Forty-fourth street. The object of the meeting was the forming of an orchid society. Clements Moore of Hackensack, N. J., was voted to the chair, and a committee of nine was appointed to make arrangements for the permanent organization of the society. Several nice exhibits of orchids were shown, and among those showing flowers or plants were Lager & Hurrell, Summit, N. J.; Carrillo & Baldwin, Scarsdale, N. J.; Joseph A. Manda, West Orange, N. J.; Seth Borden, Fall River, Mass.; Clements Moore, Hackensack, N. J.; and Julius Roehrs Company, Rutherford, N. J. So far as we can learn, it is the object of the society to hold monthly meetings and shows, and the orchid, unlike the carnation and chrysanthemum, for instance, has to

special season, it will not be such a difficult matter to have exhibitions at these monthly meetings. It is also desired to enlist as members the private gardeners throughout the country and make the society a national one.

A number of carnation growers held a meeting on Saturday last with the object of forming an association and electing officers. The aims of the society have as yet not been made public.

The Plant Growers' Market, 43 West Twenty-seventh street, will vacate these premises on May 1.

Anton Schultheis, College Point, N. Y., has several novelties in climbing and polyantha roses that will prove welcome additions to the commercial list of varieties for pot purposes when they are disseminated.

Mixed and diseased bulbs among long-florum lilies that have been grown for Easter are as common again this year as ever before. Growers in some instances have had to throw out half of

April 1, and will have sales daily thereafter.

Business at A. T. Boddington's, 342 West Fourteenth street, is of such a heavy nature that the staff has to work four nights a week in order to keep up with the orders.

J. K. Allen, wholesale florist at 106 West Twenty-eighth street, is receiving a nice line of cut sprays of bougainvillea.

John Tarkazikes and John Chirano, who did business as the Olympia Florists at 57 West Forty-second street up to May 1, 1905, have filed a petition in bankruptcy, with liabilities of \$2,512 and no assets. They filed a petition on June 2, 1905, which was closed up without a discharge.

Joseph S. Fenrich made a trip to Atlantic City this week.

Among the visitors in town were Thomas J. Grey, seedsman, Boston; Miss Celia Murray, Montreal, Can., and John Joyce, carnation grower, Congers, N. Y.

Philadelphia.

Trade Notes.

Trade continues very quiet. Many stores offered inducements on Tuesday in the way of dyed tulips, carnations and roses; some of the commission men even had lots of flowers dyed, but the demand was not extra good. It is estimated that over 60,000 2-inch pots of shamrock (trifolium) were sold in this city, principally to department stores.

From growers of lilies we hear that there are many cases in which losses of 50 per cent. have occurred; one grower puts his loss at 80 per cent. There are yet among the plants left many with only two buds to a stalk.

One of our retail stores tried advertising in the evening papers the past week, and on Saturday last sold over 5,000 daffodils put up in bunches of 25 at 50c. per bunch.

We learn from some of the Holland bulb men, who were here last week, that they are not meeting with much encouragement in orders for bulbs.

Arthur Niessen, of Leo Niessen Company, who has been ill with fever, is now improving. DAVID RUST.

Madison, N. J.

A Tour Among Growers.

Barton & Richter have the neatest place around here; their cut is not heavy at present.

M. Ladew is cutting some nice flowers. A. P. Smith has not done so well this season—too much heat and the plants look very weak.

Henry Hentz has a fine range of houses and keeps them in good shape; he is now making large repairs to his boiler room and ice plant.

Villa Lorraine Roseries have the best looking roses I have seen in many a day; the bushes are in perfect health and the cut is large.

Charles H. Totty is kept busy with his novelties; he is now propagating and shipping in large quantities.

Robert Schultze has Richmond in good shape. CYCLAMEN.

BEVERLY, MASS.—John E. Mitchell, florist, died here on March 3, 1905, aged 71 years. He was a native of Huntly, Scotland. He is survived by a widow, daughter, and son, who have been associated with him in business.

their bulbs, which, to say the least, is very discouraging.

St. Patrick's Day brought with it quite a demand for shamrocks, green carnations, etc. We noticed among some of the things that sold well, leaves of a giant oxalis. These leaves were all of two inches across, and those who had them in stock found no difficulty in disposing of them. They were used chiefly as boutonnières. Evidently several kinds of dye were used for making green carnations, as these flowers were seen in several shades of that color.

Wm. Elliott & Sons commenced their auction season on Tuesday with a sale of roses, evergreens, etc.

The Fruit Auction Company expects to begin its plant sales on Wednesday,

Chicago. News Notes. While the weather has been extremely favorable for business, retail florists complain, generally, of poor trade. Funeral work is keeping many stores going to an appreciable extent, but where transient business is mainly depended upon trade is unusually slow. Considerable preparation was made for St. Patrick's Day, and the green carnation and pots of so-called shamrocks were seen everywhere. The committee of the Chicago Florists' Club having in charge the details connected with the meeting and exhibition of the American Rose Society next week had a meeting on Monday and concluded its plans for the advertising of the exhibition. Handsome show cards for window and store display are in the printer's hands. These cards bear a pleasing three color half-tone picture of roses from a set of plates kindly loaned by the McCray Refrigerator Company, Kendallville, Ind. Posters are also to be used wherever an opportunity for display can be found. Admission tickets are already in the secretary's hands. Entries for the exhibition are coming in rapidly, and with the more than usually extensive prize list the exhibition should be the largest in the history of the society. The rules governing entries are to be strictly enforced, so it behooves all those intending to exhibit to have their entries in by the date specified in the schedules. Louis Winterston, who has been sojourning in Tacoma, Wash., is again prominent on the staff at Winterston's Seed Store. Frank Vogt has opened a florists' store at 4138 Cottage Grove avenue. C. Fraunfelder & Company, retail florists, 1602 Madison street, have made an important addition to their store, by taking in the adjoining quarters.

St. Louis. Florists' Club Meeting. The regular monthly meeting of the club was held last Thursday in the Burlington Building, 810 Olive street. This was our annual rose exhibition, but it was only a small one owing to the fact that the Spring flower show was holding at the same time. In the absence of President Young, Vice-President George Augermuller presided. The trustees reported that they had selected a new meeting place at the corner of Eleventh and Locust streets, known as Bowman's Hall. The members decided that this was a good location and voted to meet there in the future. The Pottery Committee reported that very few new subscriptions are coming in and that those desiring stock can subscribe until the May meeting, when the subscription must reach \$10,000 or the subject be dropped. J. F. Ammann reported for the committee.

A letter from W. A. Manda, South Orange, N. J., asking the club to subscribe to the Guarantors' sweepstake prize for the National Flower Show, Chicago, was read, and the subject will come up again at the next meeting. The chair appointed Messrs. Fillmore, Dunford and Halsted to pass on the merits of the roses on exhibition; they reported that the flowers were of the best quality. Mr. Ammann's exhibit consisted of Ivory, Bridesmaid, Bride, Richmond, Kate Moulton and Mme. Abel Chatenay. Mr. Guy showed an extra fine vase of Ivory with stems a yard long and excellent blooms. Discussions were then called for the good of the club which were of an interesting nature, every one of the twenty members in attendance taking part. Flower show matters will be taken up at the next meeting, at which time the National Flower Show will come in for its share of attention. There was a great deal of talk on holding a flower show next Fall; this subject will also be considered at the next meeting, which will take place Thursday afternoon, April 9, at 2 o'clock in the new meeting hall.

Spring Flower Show. The St. Louis Horticultural Society held its second Spring flower show last week in the Masonic Temple Building, Grand avenue. The exhibition this year was not so large as the last one, and the attendance was smaller, owing to the fact that admission was charged, whereas last year it was free. The bad weather also had an effect on the attendance. The exhibition itself was neatly arranged by the executive committee, with plenty of room for all exhibits, except the nursery display, which was crowded into a small side room. This latter exhibit was made by C. C. Sanders, H. Weber & Sons and Emil Rotenboer. Other displays for which no prizes were offered were made by Charles Beyer, who had a fine group of decorative and blooming plants; Fred, C. Weber and Theo. Miller, who also staged decorative stock; J. F. Ammann took all the first prizes on roses, and exhibited the new varieties Alice Roosevelt and Rhea Reid. The Chicago Carnation Company, Joliet, Ill., swept the boards on carnations. Peter Reinberg, Chicago, sent a fine lot of roses, which arrived on the second day, too late for competition. Vaughan's Seed Store, Chicago, had a large showing of plants. George A. Kuhl, Peoria, Ill., also exhibited well grown plants. Visitors to the show were as numerous as last year. When Writing Please Mention THE FLORISTS' EXCHANGE.

Ever Ready Flower Pot Cover Co., 146 Hedges Ave., Buffalo, N. Y.

THE BEST WAY to collect an account is to place it with the National Florists' Board of Trade

56 Pine St., New York

WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

THE "JAPANA" Cut Flower Holder

A handy article for florists. Sells to the trade on sight. Made of glass in three sizes. The "Anglais" Table Decoration, something entirely new, long needed. The florist and housewife will appreciate this article, as it simplifies the art of table decorating. Ask for catalog.

M. V. GARNSEY, 132 M. Waiola Ave., La Grange,

ained by the society at a banquet on Wednesday night. Among them were J. S. Wilson, Chicago, Ill.; George A. Kuhl, Pekin, Ill.; H. Blixen, Edwardsville, Ill.; A. T. Hey, Springfield, Ill.; A. S. Halsted, Belleville, Ill.; A. T. Tyler and P. Olsem, Joliet, Ill.; C. Wiley, Murphysboro, Ill.; Ed. Easterday, Kokomo, Ind.; J. F. Ammann, Edwardsville, Ill.

The judges of the exhibition were Andrew Meyer, Sr.; Alexander Waldhart and Robert P. Tesson, who placed the prizes as follows:

Collection of bulbous plants in bloom—Wm. Schray & Sons, first; Koening Floral Company, second; G. B. Windler, third. Fifty foliage and blooming plants—Wm. Schray & Sons, first; C. Young & Sons, second; Koening Floral Company, third. Ten geraniums in bloom—Koening Floral Company, twenty mimonefts—John Held. Twelve cyclamen—same exhibitor. Specimen plants in bloom—Wm. Schray & Sons, first; Koening Floral Company, second. Lily of the valley—Wm. Schray & Sons, first; George B. Windler, second. Violets—Wm. Schray & Sons, first; Koening Floral Company, second.

Display of carnation blooms—Chicago Carnation Company, first with White Perfection, Enchantress, Aristocrat and Winsor; Wieland & Olinger, second; J. W. Dunford, third. Ballous cut flowers—Wieland & Olinger, first; no second.

Fifty white carnations—Chicago Carnation Company, first and second with White Perfection; J. W. Dunford, third with same variety. Fifty light pink—Chicago Carnation Company, first with Enchantress; J. W. Dunford, second, and J. F. Ammann, third with same variety. Fifty dark pink—Chicago Carnation Company, first with Aristocrat; J. F. Ammann, second; J. W. Dunford, third. Fifty red—Chicago Carnation Company, first with Andrew Carnegie; no second. Fifty any other color—J. F. Ammann, first with Rose Pink Enchantress; J. W. Dunford, second with Harlowarden.

Four vases of roses, four varieties—Koening Floral Company, first; Fred H. Meinhardt, second. Twenty-five American Beauty—Koening Floral Company, first; Wieland & Olinger, second. Twenty-five white roses—J. F. Ammann, first with Ivory; Wieland & Olinger, second with Bride. Twenty-five pink roses—J. F. Ammann, first with Mme. Abel Chateaux; Wieland & Olinger, second with Bridesmaid. Twenty-five red roses—J. F. Ammann, first with Richmond; no second.

Display of lily of the valley—Fred H. Meinhardt, first; no second. Display of violets—Koening Floral Company, first; no second.

Floral basket in this class the only exhibitor was Fred H. Weber who showed three baskets, one of Richmond roses, one of Killarney and one of primroses. The judges awarded him all three prizes. Display of cut flowers in vases—Wm. Schray & Sons Company, first; Koening Floral Company, second.

News Notes.

Harry Rieman, who of late has worked for several florists throughout the city, and who was some years back of the firm of Rieman and Chandler, has come to grief. The police arrested him last week for passing forged checks. C. Bergestermann and George Waldhart are among the victims, and a number of others who are as yet not known.

James S. Wilson, during his recent visit here, made it known that in four months he will leave the employ of Vaughan's Greenhouses at Western Springs and open up for himself in Des Moines, Ia. He has already started the place and his son is running it. His host of friends in the trade here extended him the glad hand and wished him well.

Frank Kuhle, late with Fleischman, Chicago, has taken a position with Mrs. M. M. Ayers. ST. PATRICK.

March 21, 1908

Baltimore.

News Notes.

At the Hotel Rennert, on March 8, 1908, a meeting of the executive board of the Maryland Horticultural Society was held. Arrangements were made for the Summer meeting which will be held at White Marsh, Md., September 22, upon invitation of R. Vincent, who was present at the meeting. The Winter meeting and exhibition will be held December 1, 2, and 3 at the Fifth Regiment armory in Baltimore. The president was instructed to order two silver medals, suitably engraved for the two new roses, My Maryland and Queen Beatrice, exhibited at last show by John Cook, F. H. Kramer, Washington, respectively; each was awarded a medal. An extensive floral and agricultural exhibition is assured for the Winter meeting.

Mr. Vincent announced that he is about to make a two months' tour of the flower raising and horticultural sections of England, France, Belgium and Holland. Mr. Vincent will be accompanied by his wife and two grandchildren and will leave New York on April 4 for Glasgow.

An additional 152 acres of land have been purchased for park purposes in northeast Baltimore. The present board has acquired seven additional parks in three years, each park from 60 to 248 acres in area, aggregating 950 acres of land. C. L. S.

Kalamazoo, Mich.

State of Trade.

Leat appears to have had more effect in further diminishing business than usual. Trade is reported very quiet just now and not much prospect of increase till the annual Easter openings commence. From all indications this season will be an off one so far as profits are concerned, and those who will come out even at the end should be satisfied.

Your esteemed Cincinnati correspondent's remarks in last issue sum up the situation very nicely, but I am afraid his advice is far too sensible for the average grower to appreciate, let alone follow.

I am glad to be able to notice a more Spring-like feeling in the weather which reduces the strain on the coal bill quite largely, besides strengthening the transient sales somewhat.

The melting of the snows caused the Kalamazoo river to overflow its bed and did a considerable amount of damage in Kalamazoo, and Battle Creek as well as the villages around. While one or two florists were on the anxious seat for a few days the floods subsided without causing any more than a little extra trouble, and no damage to speak of has been suffered by the Kalamazoo growers.

Truck gardening seems to be having a boom here this year. I presume largely on account of the industrial situation remaining dull; therefore "back to the land" appears to be the motto of some of the workers of the city.

The nurserymen are getting ready for the Spring rush and consider the orders received will be most satisfactory, some claiming a goodly increase of trade over last year's. S. B.

Washington, D. C.

News Notes.

Mrs. Mary Elizabeth Shaffer, mother of George C. Shaffer, the well-known retail florist, died at her home in this city on the morning of March 16. The sympathies of florists generally are extended to the bereaved family.

The ladies' auxiliary of the florists' bowling team is scheduled to play the Department of Agriculture team on the night of the 19th. J. L. C.

ALBANY, N. Y. Among Albany's florists Amos F. Balfourt might be considered its youngest. Mr. Balfourt, while only 26 years of age, not alone is an artist in floral work, but also a practical florist, having followed up the business since a boy. Several years were spent in the employ of L. Menand, florist, Cemetery avenue, during which time he gained a practical knowledge of floriculture. At the present time Mr. Balfourt's establishment numbers three greenhouses, and a store located at 121 Northern boulevard, corner Clinton avenue.

The Week's News.

Professor H. S. Jackson of the Delaware Experiment Station was the speaker at the weekly meeting of the Massachusetts Horticultural Society on Saturday. His subject was "Disease Resisting Varieties of Plants and their Development." There will be no lecture to-day on account of the Spring show, and on the 28th inst. there will be a conference on grape growing.

The New England Dahlia Society will hold an exhibition in this city September 17, 18 and 19 next. As a central location was deemed necessary for successfully holding a dahlia show Lorimer Hall and Gilbert Hall of Tremont Temple have been secured. Over \$500 will be offered in prizes, and the schedule, which is now in preparation, will appear in the April issue of the Dahlia News. The March Dahlia News will be a double number containing the classification of the dahlia.

Penn. the Bromfield street florist, is handling some superb plants of cyclamen, grown by G. M. Anderson, Milton, Mass.

Hoffman has an artistic store in the fashionable Back Bay district; he has some very fine forced rhododendrons and lilacs as a specialty.

Houghton & Clark have a well established trade and their store is at all times a place of activity.

The new Boylston street store mentioned last week is known as the Kensington Flower Shop, and as it is in a fine location its success is assured.

The Rosary, since its enlargement, is one of the finest stores in the Back Bay district. The firm has now ample room for the handling of its ever increasing trade.

H. M. Robinson & Company report business much better than expected, and showing a considerable increase over the corresponding season last year.

Paine Brothers, Randolph, Mass., are cutting some excellent narcissus at present.

Violets have been very plentiful during the past week.

John J. Fee, Jamaica Plain, has a fine lot of tulips, Murillo, Rose Hawk and Flamingo being superb varieties.

Shamrocks have been very popular in Boston this season, the total sales having exceeded by many thousands those of any previous year.

J. W. DUNCAN.

DAVENPORT, IA.—The Tri-City Florists' Club met and elected officers last week at the home of Harry Bills on Brown street, and changed the place of their annual banquet from Moline to Rock Island on March 19. The officers elected are: President, Wm. Knees, Moline; vice-president, Harry Bills, Davenport; Henry Gaethje, Rock Island, and Mr. Becker, Moline; secretary, J. T. Temple, Davenport; financial secretary, Theo. Ewaldt, treasurer, C. O. E. Boehm, Davenport; executive committee, E. Anderson, Moline, Henry Pauli, Davenport, and H. Meyer, Rock Island.

News Items.

Wholesale trade is very good and retail trade is not to be complained of; so say the growers, though much of their stock is lost, as the production is far greater than the most sanguine would expect to dispose of.

John Hartje has bought ten acres of ground south of the city. Mr. Hartje expects to have an up-to-date range of glass on it before Fall.

Quite a number of local florists expect to attend the Chicago rose show.

Paul Brandlein is cutting from a house of extra fine Ten-Week stocks.

The executive committee of the State Florists' Association held a meeting last week to dispose of important business matters.

Visitors: J. S. Stuart, Anderson, Ind.; G. Reising, Chicago, Ill.; Mr. Hall, with Reed & Keller, New York.

1170 Broadway, New York

Heating.

Growers' Problems Solved by U. G. Scollay.

Please give size of supply pipe for steam for the following houses: Number 1, 56x100 feet, 20 feet high to ridge, 4 feet glass on one side only, glass ends; number 2, 33x150 feet, no glass on sides, glass on ends, 16 feet to ridge. What is a safe distance to take steam away from the boiler in greenhouse work, pressure five pounds? Should returns for steam be as large as supply pipes? F. R. Penna.

—You do not state the temperature at which you desire to keep these houses, so I will assume about 60 degrees in zero weather. The main steam line from the boiler should be not less than 5-inch, the main steam line for the 56x100 foot house 4-inch, and the 33x150 foot house 3½-inch. If you desire to use more than one main, which you probably will, in each of these houses you can distribute the mains with smaller sizes, only be sure to have the aggregate area of these mains equal the sizes mentioned above. The main return at the boiler should be not less than 2½, and you will be safe if you have the return for each house equal 2½-inch. The above calculations are based on the boiler being within a reasonable distance, say 25 feet, of the greenhouses. If you are compelled to run in any great length between the boiler room and the greenhouses, underground, I shall require more definite particulars. With steam at 5 pounds pressure, the boiler can be placed at a considerable distance from the structure to be heated, provided the capacity of the mains will allow for the distance, and the boiler power is sufficient. In your case, since you ask the question as to how far it will run, I would state that I would not like to give any set distance, for it might mislead others. It would be best for me to study each individual case, and then increase my mains as the conditions call for. In any event, in case you use a series of smaller mains than those specified, do not use anything smaller than 2-inch. U. G. SCOLLAY.

WORCESTER, MASS.—On Wednesday, March 11, 1908, the Worcester County Horticultural Society held its annual banquet and reunion in Horticultural Hall, about 250 people attending. John B. Bowler was toastmaster and among those who spoke of their work, and told entertaining stories were: C. S. Gold, president of the Connecticut Pomological Society; I. L. Harvey, vice-president of the New Hampshire Horticultural Society; J. W. Clark, the new president of the Massachusetts Fruit Growers' Association; Prof. F. C. Sears of the Massachusetts Agricultural College; Edwin H. Burlingame, secretary of the Rhode Island Horticultural Society; Dr. George M. Twitshell of Augusta, Me.; A. Warren Patch of Boston, and Joseph K. Greene. The Midgley quartet, composed of Edward C. Midgley, Mrs. Harry Hildreth, and Mr. and Mrs. Percy G. Forbes, sang selections, while Mr. Forbes and Mr. Midgley sang two duets. The exercises closed with a selection by the quartet. The guests adjourned to the main hall, where the Light Infantry orchestra played for dancing until 12 o'clock.

BROOKLINE, MASS.—Robert B. Leachars, whose death was recorded in last week's issue, was born in Dundee, Scotland, in 1823, his ancestors being gardeners and nurserymen. He came to this country at the age of twenty-five. He worked at a greenhouse in New Haven and studied chemistry at Yale, forming a friendship with Professors Siliman and Dana. He established a large nursery at Wollaston, which place has taken his name from his estate near Quincy. In 1851 Mr. Leachars published "A Practical Treatise on the Construction, Heating and Ventilation of Hot-houses," the introduction to which was written by Professor Benjamin Siliman and James D. Dana.

ST. JOSEPH, MO. The florists of this city were victimized by a swindler who appeared before them "cum magna fletu" and told about his child dying and wanted flowers. In payment he presented a check which was cashed, then vanished. D. M. Reichard, Stuppy Floral Company and Ed. V. Myers are losers on checks.

Superior Merit
in all and every way over any and every other heating boiler is the claim we make and will prove for the
NEW DUNNING BOILER
Easiest to set up, connect, operate, regulate, clean and pay fuel bills for. Smallest fuel expense with largest heating results.
New Dunning Portable Water Boiler
Specified for Thirty Years by U. S. Government for its Army Posts and Many P. O. Buildings.
BEST FOR YOUR GREENHOUSE
Large fire box with high crown sheet makes a perfect oxygen-and-coal-gas mixture. This burns at high temperature and flame travels twice the boiler length through three vertical channels—not Tubes—which completely encircle inner and outer shells and give immense vertical heating surface. **No efficient heat goes up smoke pipe—the water absorbs it all.**

ICE COVERED EAVES

Here is what happens in the winter to the southern eave of Mr. S. Goddard's wooden plate house at Framingham, Mass.

And here is the north eave of one of our Ice-Clearing Eave Plate houses, erected for Mr. Goddard, right next to the one above. No backed up snow—no curtain of icicles. The Ice-Clearing Eave Plate does it.

Not only does this Eave Plate of ours, with sash bar clasps attached, free the ice, but it adds tremendously to the strength, endurance and lightness of your house. It is used on all our houses. Sold separately if you wish it. Send for circular and prices.

We make every part of a greenhouse but the glass. We sell any part

FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 13

NEW YORK AND CHICAGO, MARCH 28, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress

the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,
BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also

VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$5.00 per 100, \$45.00 per 1000.

VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.

We can supply, also,
WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Vaughan's Asparagus Plumosus Nanus

We handle this Asparagus both in seeds and plants of all sizes in very large quantities and make any close price on larger amounts on application. Our seed is pure, fresh, of best commanding quality and extra-sharp, etc.

Northern Greenhouse-Grown Seed.
Per 100 seeds \$1.00; 1000 seeds \$10.00; 10,000 seeds \$87.50. Price for larger lots on application.

TUBEROSES

True Dwarf "EXCELSIOR" Strain.

Our stock of Excelsior Pearl has been bred up by many years of careful selection from bulbs producing the shortest stalks with full heads of double flowers. But two or three firms can supply this extra dwarf "Excelsior" strain. First size bulbs, 100 \$1.00, 1000 \$9.00.

TUBEROUS BEGONIA

Single white, yellow, pink and scarlet 35c. per doz. \$4.50 per 100; single mixed 30c. per doz. \$2.25 per 100; double white, yellow, pink and scarlet 50c. per doz. \$4.50 per 100; double mixed 50c. per doz. \$4.00 per 100.

S. & W. CO.'s FERTILIZED FLOWER POTS

For Growing and Shipping Plants

Made of Extra Heavy Manila Waterproof Cardboard, Fertilized, Wire Stitched Seams, Perfect Drainage and Shipped Flat.

If you grow Tomatoes or Pot Plants you cannot afford to pass over this.

These square pots economize space, give more room to the roots than the tapering round pots. In setting out plants the pots are not removed. Simply unlock the bottom flaps and turn them up (see cut), allowing the roots to grow down.

Size: Gross Wght. pr 1000 Pr 250 Pr 1000
 2 1/2 in. about 30 lbs. \$0.75 \$2.25
 3 in. about 40 lbs. 1.00 3.50

In setting out plants unlock the bottom, pull pot up one inch, and you have a wall to protect the roots against Grubs and Worms.

STUMPP & WALTER CO.

You Know

that a handsome bow of ribbon adds wonderfully to the effectiveness of your flowers. Here comes Easter with your sales of plants and flowers. That big bow must look right. The color must harmonize, the ribbon must be lustrous.

And yet—not too expensive, and just here **Pine Tree Ribbons** come in. Pine Tree Ribbons harmonize. Pine Tree Ribbons are lustrous. Pine Tree Ribbons are not expensive. Not expensive, because with your supply house and jobber's profit cut out, you.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendal, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

ROCHESTER, N. Y.—Report has it that a New York seedsman and florist is looking for a location in this city.

WASHINGTON, D. C.—On March 20, 1908, a bill reported to the house from the committee on interstate and foreign commerce makes it a misdemeanor to carry on interstate or foreign commerce in any seeds or bulbs which are adulterated or misbranded. For example, if seed purporting to be Kentucky blue grass contained seed of Canada blue grass, such mixture, under the proposed law, would be regarded as an adulteration.

The report on this measure declares that the United States has become the dumping ground for all the worthless seed of the world. All seed looks alike to the average man, says the report. He doesn't know the difference between turnip seed at 40 cents a pound, cabbage seed worth \$2 a pound, and cauliflower seed sold at \$10 a pound.

The report says: "The frightful extent to which adulteration of seed has grown in our country is a menace to the interests of the farmer, the gardener, the horticulturist and the honest seedsman. Seed that is held over until the germ is dead and the vital force entirely gone is mixed with fresh seed of the same kind and the mixture sold as fresh seed."

NEW BUILDING OF DEPARTMENT OF AGRICULTURE, Washington, D. C.—The new structure for the department is now complete, and the work of moving the various bureaus that are to have quarters in the two wings began last week. The central structure, which is designed to connect the two wings, will be erected as soon as Congress makes an appropriation for the purpose. Senator Dooliver has already introduced a resolution in the Senate providing for the erection of the main building. It is thought that the appropriation will be voted at the present session of Congress. The Bureau of Plant Industry, the Bureau of Animal Industry, the Office of Experiment Stations, and the library have been assigned quarters in the new structures. The department has been greatly handicapped in its work by being so widely scattered, and it is thought the business will be greatly assisted by the improved quarters.

IMPORTS OF SEEDS, ETC.—March 19.—J. M. Thorburn & Company, 15 bags grass seed; McLutchison & Company, 29 cases plants; F. B. Vandegriff & Company, nine cases plants, March 20. S. S. Thorburn & Company, one bag seed; C. C. Abel & Company, three cases live plants; Schulz & Ruckgaber, 17 bags seed, 151 bags clover seed.

Seed Trade Notes.

The splendid manner in which trade has developed during the past week has surprised most seedsmen as much as it has delighted them; and when it is carefully considered that the steady daily volume of increasing orders has materialized in the face of much colder and not at all Springlike weather, it surely means that after all we are to have a very active and lucrative season. It has been too cold on an average the past fortnight to do a really great cash-over-the-counter business, but so many large orders from market gardeners, institutions, and other large planters have been placed that the full capacity (including night work) of all our seed houses will not again be able to catch up with the orders until the end of the season of 1908. I think that a fair average of the orders now being received each day would take at least two days to fill them, so to speak. Trade has certainly very suddenly assumed enormous proportions for the month of March. Stocks are short enough to make buyers anxious, and prices are good.

It is to be regretted that already many varieties of popular garden seeds have been practically disposed of, that is, as far as the wholesale seedsmen are concerned. Such items as White Globe Southport onion; Stowell's Evergreen, and Country Gentleman sweet corn, Chinese giant pepper, New York Improved egg plant, certain sorts of muskmelons, and Lima beans are mostly in planters' hands; for this year is no exception to the well fixed rule that it is always the scarce things that everybody wants, asks for first, and insists upon having while obtainable. Of course, many customers will be much disappointed when they come for their seed supplies later in the season, only to find that many of their favorite sorts are unobtainable; but there are seeds of good and desirable varieties enough for all, and being obliged to use other varieties than usual may result in much good to the planter and seedsman as well, by influencing a wider use of our many fine, but somewhat neglected, vegetables.

It is now perfectly evident to all well informed members of the seed trade that while onion seed may be somewhat lower in price next season than present rates, still no great price reduction is expected. There are several valid reasons for such a conclusion; in the first place, the onion bulbs themselves for this season's setting are far from plenty, and as a consequence are held at high rates. Again, so large have been the losses of the onion seed growers last season and for some years previously that only at stiff prices will they accept contracts for onion seed for the sales of 1909.

All indications, carefully considered from every section of the country, now point to about an average early planting season; surely this outlook gives the greatest satisfaction everywhere.

W. ATLEE BURPEE writes, under date of March 16: "My present intention is to get back from my Spring trip to California in time for the American Seed Trade Association convention in Detroit, June 22, and then a week after my return sail with my family July 4 for London to see the sweet peas in England. It requires considerable attention just now to keep track of all the numerous seedlings of Countess Spencer."

European Notes.

At last the supply of overhead moisture appears to be exhausted and drier although very gloomy conditions prevail. In spite of this the plants of florists' flowers continue to make remarkable progress.

During the present week the writer has had the pleasure of seeing James's strain of giant cinerarias which are now at their best. Quite a large number of the flowers are from 4 to 5 inches in diameter and of elegant form and good substance, while the colors are simply splendid. Acting on the advice of his friends Mr. James has introduced a much larger proportion of ringed flowers; i. e., flowers with white centers. This has considerably enlivened the effect of the strain, and as the ringed flowers are some of the largest there is no diminution in size. The results have been most satisfactory, for while the 1907 crop was a record one, the stock is quite exhausted and many recent orders cannot be filled until the new crop seed is ready.

A good article easily sells itself if it is what the public requires.

As regards calcularias, Mr. James has at last decided to discontinue growing the immense plants which used to delight visitors to the May exhibitions in London and is now only growing plants in 32's. Calcularias are such delicate subjects to handle that the loss of one exhibition plant is a serious matter. The demand, which was rather slack a few years back, has now revived and continues to increase.

For bedding purposes, the French variety which E. Benary has introduced this season under the name "Triumph of the North" cannot be too strongly recommended. It also makes a very elegant pot plant.

By the way, growers who wish to obtain blooms of the mammoth proportions of those exhibited by James should follow his example and grow them close up to the glass.

The one aim of the Dutch grower appears to be to kill the goose that lays the golden eggs. Peas, pole beans, Windsor beans and nasturtiums are cases in point. As regards the latter article the following extract from the special offer of a large grower is very interesting: "For your government we can tell you some growers have lost the fancy for this article, so we expect only a small acreage to be grown this year." *Verb. sap. sat.*

PLANTERS' SEED CO.
SPRINGFIELD, MO.

DREER'S HARDY PERENNIALS

Largest assortment of desirable varieties. Plants of proper size to give best immediate results.
For complete list of varieties see our current wholesale list.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns for the season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

Mahonia Aquifolium.

Editor Florists' Exchange:

I am much interested in Mr. Meehan's comments on *Mahonia aquifolium* in *The Florists' Exchange* of February 22, 1908. We seem to have two varieties of Oregon grape here, one the low growing sort, ordinarily known as Oregon grape, and the other more of a shrubby form, reaching a height of six feet. Can you tell me the name of the tall growing sort? ROLAND G. GAMWELL.

Bellingham, Wash.

—The taller one is called *Mahonia aquifolium*; the low grower, *M. repens*. The latter is classed as a variety of the former. J. M.

Horticultural Notes.

Evergreens are sometimes ruined by too close pruning. Some kinds do not mind pruning below their green foliage, but others do, and it is safer not to risk it. Early Spring is the time to prune.

A profitable business for the florist and nurseryman is the growing of vines in pots. These plants are called for all Summer long. Situations for planting them, forgetfulness and many other causes create a demand after it is too late to dig them. Honeysuckles and ampelopsis lead all others, though since the *Clematis paniculata* has proved itself so desirable it, too, is in great demand. Pot them now.

Of the two native rhododendrons, *R. maximum* and *R. catawbiense*, the former is later in flowering than the other. *R. catawbiense* blooms when almost all the others do; *R. maximum* not until the close of June or later. It may suit some persons to plant sorts that all flower at about the same time; others may think the later one, *R. maximum*, the better.

The calycanthus now common in all collections is not floridus, but one not nearly as sweetly perfumed, the *laevigatus*. The true floridus rarely seeds; *laevigatus* seeds freely, hence its abundance in nurseries. It has some odor, but not the equal of that of the floridus.

It cannot be repeated too often that oaks of good size should be root pruned a year or two in advance of being transplanted or they are not likely to live. After sales are over, go over a block and sever some of the stronger roots; and do the same with all large trees. Add the cost to the price of the trees, and still the purchaser will gain by the operation.

Kalmia latifolia does not like to be in the full sun. Like the rhododendron, it is naturally a shade lover. A situation affording it the morning sun only is right for the plant, and in addition it prefers a light loamy soil, well drained.

Puddling the roots of trees before packing them is practiced now by almost all nurserymen. It helps wonderfully in preserving the life of those so treated. A large tub or box is sunk in the ground and filled with liquid mud, into which the roots are dipped before packing is done. It is a good plan for those to follow who have a number of trees to plant and have to set them one by one, moisture being preserved.

Florists can recommend no single shrub that will please more than the Japanese snowball, *Viburnum plicatum*. This for a Spring-blooming shrub, and the *Hydrangea paniculata grandiflora* for an Autumn-flowering one.

The Himalayan pine, *P. excelsa*, is one of the grandest of lawn trees, its vigorous growth, spreading habit and its long, drooping, silvery colored needles entitling it to be called this. As with the common white pine, it transplants with more safety than many other kinds. Its long cones, on mature trees, are considered ornamental.

In their wild state all grapes do not bear fruit, some being sterile. The one called "flowering grape" is a sterile form of *Vitis riparia*. Some folks like such a vine near their dwelling. They get the perfume of the flowers and not any fruit, which meets their wishes.

Plant crepe myrtle on high ground where ground will cease early in Autumn, and they will often survive the Winter without protection. In ordinary situations they get killed back partly in Winter.

City florists are continually asked for evergreen for small yards, vases and cemeteries, and they would find it to their advantage to have a small plot of these and such shrubs as are often asked for.

Borers often attack the trunk of English hawthorns, sometimes to the destruction of the bushes. For this reason pink, red and other varieties of this tree are better budded on the native stocks, say, *coccinea*, *cordata* or *Corn Gall*, as these seem immune from borer attacks.

Yucca gloriosa recurvifolia.

Wintering English Hollies.

There must be some mistake in the general idea prevailing that the English holly is not hardy here. This idea is entertained too in spite of the fact that there have been one or two fine large specimens in our cemeteries in times past, as there may be yet. Both Woodlands and Laurel Hill had one each, that must have stood in their positions twenty years. Two years ago the writer set one in his garden, which has just passed through its second Winter without the damage of a leaf. Both Winters have been favorable to it, having seen abundant rains and snows, and no hard freezings until after New Year's. The mercury has been as low as between 10 and 5 degrees above zero a half dozen times. The holly is about 5 feet in height. It is in a place free from sun or nearly so in Winter and well sheltered by houses near it, but it is no more sheltered than thousands of similar spots in this city.

It is probable that in Winters where the mercury would register zero night after night with high winds the leaves of this holly would suffer, but even then it would be no more than what happens to our native holly, our native rhododendron and other evergreens. It is within the experience of all of us that our native deciduous trees even have suffered in peculiar Winters.

If our nurserymen and florists would keep in mind that this holly is hardy, they could recommend it to many who would be very glad to have it. It is far prettier than our native one, *I. opaca*, in foliage, not to speak of its berries. The one spoken of as being in the writer's garden is of the fertile kind. No other holly is near it, yet it sets its berries; and at this writing, March 12, the berries are as bright and fresh as they were at Christmas.

Arsenate of Lead.

Experiments on the past two years and more have demonstrated that arsenate of lead is a better insect destroyer than any other article in fact than any other article that has been employed. The reason is, that it sticks to the foliage better, and does not wash off in rains as quickly as other articles do. This adhesive quality is very much in its favor, saving repeated sprayings which have been found necessary when Paris green and other substances have been used. It has been found that the ready made arsenate of lead employed at the rate of one pound to fifty gallons of water is the right proportion to use.

As is well known to those interested in the subject, the worm of the codlin moth enters at the apex of the embryo apple, just as the flowers fade, developing from eggs which are laid in the tender leaves just as they unfold. No time is to be lost in having the mixture ready to spray just as the flowers fade, for within a very short time thereafter the worm will have entered the tiny apple, and the spraying must be done before the worm moves. If done at the right time, practically every worm will be killed, and this would end the business of spraying for the season, for it is those that escape from the first brood that parent what is called the second crop. The worms that reach the ground from the fallen apples go into the soil under the trees, and passing through their stages to the moth form attack the apple again, except the last brood of worms, which remain in the ground all Winter, emerging at the time the foliage is appearing on the apple trees.

More than usual care is required when spraying for this moth. It is different spraying a tree in leaf from one bare of foliage. In the case of the apple the spray must enter the apex of the flowers as well as reach all parts of the foliage. There must be force enough to the stream to cause it to reach higher than the tree that it may reach the upper part of both leaf and flower as it descends. A nozzle with a bend to it is sometimes used, as it throws the spray downward with some force, reaching more insects than side streams do.

Not only should one spray his trees but every effort should be put forth to persuade neighbors to treat their trees as well, to prevent moths flying from their trees to his, which often happens, though it is believed that the codlin moth does not fly a great distance.

Yucca Gloriosa Recurvifolia.

It is with much satisfaction we are able to present to the readers of *The Florists' Exchange* a picture of *Yucca gloriosa recurvifolia* taken from a plant growing outdoors, in a position it had occupied for several years. It is strange that an opinion prevails the plant is not hardy, when, inasmuch as concerns Philadelphia, Pa., it has never been injured when in the most exposed places for the many years it has been under our observation. Were its hardiness more generally understood it would be in great demand, for is it not one of the most beautiful of yuccas?

There seems to be some confusion regarding the correct names of yuccas. The one illustrated in many respects seems correctly classed as being a variety of *Y. gloriosa*. Its hardy character and its trunk making habit call for its relationship to it. On the other hand, its Spring-blooming and its flagid, recurved leaves are the opposite of those of *Y. gloriosa*. In the case of the plant photographed it flowered earlier in June than did *Y. angustifolia* and *filamentosa*, while, as is known to those who have observed *Y. gloriosa*, it does not bloom until October.

Whatever the proper name for it—and there seems no ground to dispute the one it has—it is a plant we all want for its exceeding beauty. It is more beautiful than any other hardy yucca we have. The clustered panicle of flowers rising from its base of recurved leaves produces a picture of surpassing loveliness. Neither of the other Spring-blooming sorts, *angustifolia* (glauca) and *filamentosa*, has the dense, clustered panicle of this.

This yucca is common in greenhouses and conservatories, being used as a decorative plant on lawns in Summer. Those who have them should plant them out permanently, and give their tub room to some other worthy plant that is not hardy.

The producing of seeds by yuccas is almost or quite dependent on the insect problem, known as the yucca moth, and as this insect appears but at a later date than when this yucca (the *recurvifolia*) flowers, its production depends on root cuttings. The fleshy roots are cut up into inch lengths, or a little longer; and if the work be done in early Spring, the pieces set, indoors preferably, though outdoors will do, there should be a small plant from every piece by Fall. Probably the insect would arrive in time to fertilize the flowers in some seasons. JOSEPH MEEHAN.

Trees, Shrubs, Roses, Vines

Our Annual Special Offer. Note the Prices and Sizes of Stock.

Specimen Trees and Shrubs. Something seldom if ever found in nurseries. Large specimen shrubs grown regardless of cost by a private estate. Anyone desiring to make immediate effect can find nothing in this country equal to these shrubs and trees. They are growing 4 feet apart each way and have been transplanted several times. Write us for full particulars regarding this special stock.

Send for our wholesale list in which we list thousands of varieties not mentioned below.

HARDY PERENNIALS

OUR collection of varieties is the largest in this country. Our plants are all field grown except such as do not lift well from the field. We can also supply nearly all of the varieties in pot grown plants when such are desired. These will be strong, well established plants from 3, 4, and 5 inch pots. For complete list of varieties see our wholesale list.

THE ALPHA AND OMEGA OF SWEET PEAS.

BY S. B. DICKS, F. R. H. S.

The Alpha.

In the hope that the continued and increasing interest in sweet peas in Britain is also maintained in America I have the pleasure to present to the readers of The Florists' Exchange a photograph of what is probably the oldest flower of the sweet pea in existence in the world at the present time. It is preserved in Leonard Pluknet's Herbarium which forms part of the Hans Sloane collection in the Natural History department of the British Museum, which is located in a magnificent pile of new buildings at South Kensington, London.

S. B. Dicks, F. R. H. S.

Dr. A. B. Rendle, M. A., Keeper of Botany at the British Museum Department of Botany, was kind enough to allow me to photograph the specimen with a view to its being published in the Annual of the National Sweet Pea Society, and The Florists' Exchange.

As the flower is not reproduced at its full natural size the following exact measurements may be of service. Standard $1\frac{1}{8}$ inch deep and $1\frac{3}{8}$ inch wide; width of leaf, 1.5-3.2 inch.

The standard of each flower shows only an insignificant notch and is in other respects well formed; the wings and keel are very small in the fully opened flowers, but more prominent in the buds.

The descriptive name first applied to the plant (*Lathyrus* with two opposite broad leaves and two flowers on a stem) is very accurate, as a glance at the illustration will show.

The following description of the herbarium and its owners may be of interest. Leonard Pluknet was born 1642 and died 1706. He practiced as an apothecary at Westminster where he had a botanic garden in which he no doubt cultivated some of the herbs valued by those who practiced the art of healing. The greater part of his life was spent in struggling against adversity, but he was ultimately appointed superintendent of the gardens at Hampton Court Palace and Royal Professor of Botany. His principal botanical works were "Phytographia," 1691-2; "Almagestum Botanicum," 1696; "Almagesti Botanici Mantissa," 1700; and "Amaltheum Botanicum," 1703, all in folio size. The engravings which constitute the Phytographia are simply splendid, while the care and ability displayed in his other works are remarkable.

The sweet pea is not illustrated in the Phytographia, but is first mentioned in the "Almagesti Botanici Mantissa" as "the greater Sicilian Lathyrus with red stand-

Fig. 3. Caspar Commelin's Drawing in the Horti-Medici Amstelodamensis, 1697-1701.

ard and blue wings, sweet-scented and floriferous, with seed pod like a pea"; from Dr. Uvedale's garden. Cupani's descriptive name is added.

Sir Hans Sloane, who no doubt purchased Pluknet's herbarium after his death, was a distinguished physician and naturalist practicing in Loudon. He formed a valuable museum of the rarest productions of nature and art, which, with his library of 50,000 volumes and 3,566 MSS. were purchased for the nation by Act of Parliament for £20,000 (\$100,000) and made part of the British Museum. The collection is fittingly housed in the museum at South Kensington and is in a perfect state of preservation.

(The accompanying illustration shows the full page of the book in which the specimen shown above is mounted.)

It is customary now to speak of the parent variety as purple, but it will be noted that Pluknet describes it as red, and the flower preserved in his herbarium is of that color. Commelin, however, in the "Horti-Medici-Amstelodamensis" distinctly describes it as purple. From this I infer that there have been variations in color from the beginning (the existence of the white is mentioned in Ruppil's Flora Jenensis, 1718) and that the vagaries of the Countess type are simply the outcome of original tendencies. This is in strict accordance with the views entertained by the late Henry Eckford.

The difference between nature and its artificial representation may easily be seen by comparing Commelin's drawing (Fig. 3) with Pluknet's specimen. It is amusing to note that while some unopened buds are portrayed at the base of the plant, a fully developed seed pod appears at the third joint.

This sketch would be incomplete without a few partic-

ulars respecting the man to whom Cupani sent the first sweet pea seeds that were grown in Britain.

Robert Uvedale, LL.D., was born in London, 1642, and received a good education at Westminster and Cambridge. He was not only an eminent botanist but also a good classical scholar, and he became Master of the Foundation School at Enfield, where his world-famous botanical garden was cultivated with great care and contained a number of choice exotics. He was one of those who assisted the poet Dryden in translating "Plutarch's Lives."

Cupani also was the possessor of a highly cultured mind and it is not surprising that he should send seed of his newly found treasure to a brother scholar.

So much for the "Alpha" of Sweet Peas.

The Omega

as known to us to-day is surely to be found in Burpee's White Spencer, of which an illustration is presented for comparison. (Fig. 4.) In this, and similar varieties, the standards measure fully two inches across and one and a half inches deep; the wings are fully an inch wide and nearly as deep as the standard.

The developments and improvements of the flower during the past 208 years are simply marvelous and the end is not yet in sight. Were Linnaeus now living he would recognize the fact that the section "bifloris," in which he placed it, is no longer the correct classification of a plant that produces from four to six flowers

Fig. 4. Burpee's White Spencer Sweet Pea. Courtesy W. Atlee Burpee & Co.

on a stem. The endless variety of colors now in existence is simply bewildering and the most enthusiastic expert is fain to cry "Hold, enough!" But a fiery scarlet, a true blue, and a pure yellow, have yet to be produced.

S. B. Dicks, F. R. H. S.

CHINESE PRIMULAS.—Messrs. Carter & Company of Holborn, London, have long been celebrated for their fine strain of the various types of *Primula sinensis*, and when recently visiting their nursery at Forest Hill I found that they are still working for further improvement, one house being devoted to plants for cross-fertilization, and a few specially selected plants of the very finest forms of the various colors. The houses filled with the main stock were an interesting sight. In some the plants were in full bloom, but in others seedling had commenced, and it was evident that there will be a good crop of seed later on. All the flowers are carefully fertilized by the aid of a small camel's hair brush, a separate brush being kept for each color. The advantage of this is evident from the fact that each large batch is perfectly true to type. I noted numerous distinct varieties. In whites King Edward was one of the finest types; Holborn Queen, a pure white fern-leaved, and Flame, pure white with dark leaf-stalks; Snowflake, semi-double white; Holborn Coral, clear coral pink; Princess May, clear blush, the bright red, carmine, vermilion, and numerous other shades were seen with flowers of good substance. The semi-doubles included all the most desirable shades of color. The stellata type were also of the best quality in many shades of color. Holborn Blue was the first of the blue shade seen; this is now considerably improved, and the same color is seen in the other distinct types. *Cinerarias*, *calceolarias*, *gloxinias*, and *begonias* are also extensively grown for seed, and will fill up the houses after the primulas have yielded their harvest.

Burpee's Two "Unique" New Vegetables of Unequaled Value for Market Gardeners

"Fordhook"

Three Pods, natural size, reproduced from Photograph of the Unique FORDHOOK BUSH LIMA

Fordhook Bush Lima Bean

The only stiffly erect Bush form of the popular "Potato" Lima! Both pods and beans are more than half again as large as the Challenger Pole Lima.

Fordhook Bush Lima is of stiffly erect habit, branching freely but with all the branches held upright. This ideal bush growth is strikingly in contrast to the low spreading growth of the *Kumero* or *Dreer's Bush Lima*.

Fordhook Bush Lima has foliage like that of the large pole Limas. The leaves are large, smooth and a dark rich green, identical with the leaves of *Burpee's Bush Lima*, as contrasted with the smaller pale green leaves of the *Kumero* or *Dreer's Bush*.

Fordhook Bush Lima bears tremendous crops! The beans are ready for use as early as those of *Burpee's Bush Lima*, which furnishes fine Lima beans for the table three to four weeks earlier than they can be had from the earliest pole varieties. The plump well-filled pods are twice as large as those of the *Kumero* or *Dreer's Bush*, while the individual beans are also fully twice the size. The pods measure four to five inches in length, containing four to five large beans each.

Fordhook Bush Lima produces such large "Potato Limas" that visitors to our "Fordhook and SUNNYBROOK FARMS" have been astounded! The beans are very "fat" and lie so closely together in the pod that they are flattened on the ends. The pods are so closely filled that the beans are very easily shelled.

Fordhook Bush Lima has an additional merit over all other varieties of the "Potato Lima" type. The green beans, even when of full size, are tender, juicy and sweet in flavor when cooked, resembling the flavor of the finer varieties of large flat Lima,—as distinct from the rather dry and mealy character of all other varieties of the *Potato*, *Challenger* or *Dreer's Lima* type.

Fordhook Bush Lima under widely varied conditions during the past season (1907), has fully justified all claims made in our introductory announcement last year. Indeed, in habit of growth, great productiveness and fine table quality, it has even surpassed our own expectations.

Per pkt. 10 cts. (net.), 1/4 pint 30 cts., 1/2 pint 55 cts., per pint \$1.00.

"What's in a Name?"

The Name—**Fordhook**—is known to planters everywhere as that of our Pennsylvania Farms, so famous as the home of the largest Trial Grounds in America. The name **Fordhook** is widely known also, as that of the finest extra long *Cucumber*,—the best all-the-year-round *Squash*,—the earliest large *Watermelon*,—and the most unique *New Bush Lima*. With such a record, our friends will readily understand that when we have a new muskmelon, of most unusual merit,—upon which we willingly stake our reputation,—we naturally give it

The Name "Fordhook"

NEW MUSKMELON—BURPEE'S "FORDHOOK" (See from a Photograph)

Burpee's New "Fordhook" Muskmelon

Fully equals our *Emerald Gem* in delicious flavor. So firm is the rough-netted skin, and so solid the thick salmon flesh, that the melons carry to market even better than do *Burpee's Netted Gem*,—the famous "Rocky Ford" Melon.

Fordhook Melon is the result of a cross between *Burpee's Emerald Gem* and the *Improved Jenny Lind*. As shown by the illustration, it resembles the "Improved Jenny Lind" in form; it is equally as roughly netted, while the skin, showing between the netting, is emerald-green. The flesh is very thick, of an attractive deep salmon color and surpassingly sweet to the very rind. It is fully equal in flavor to the *Emerald Gem*. The beautiful salmon flesh, while so surpassingly luscious, is not only very thick, but also extremely solid. The rind, although thin, is unusually firm, so that the fruits carry well to market. There are no muskmelons (or cantaloupes) that are better shippers.

Fordhook Melon is most vigorous in growth, very early and extremely prolific. The fruits are ready for market fully as early as the green-fleshed *Early Jenny Lind*. The vines grow vigorously and each vine sets from five to nine melons immediately around the stem; frequently the fruits touch one another. The melons are remarkably even in size, weighing from 1 lb. 8 oz. to two pounds each. "Fordhook" is so "thoroughbred" that there are practically no fruits unfit for market. We print letters from the originator and several other growers, all uniting to prove that this unequaled new melon is well worthy of the name **FORDHOOK** to emphasize that it is

"Burpee's Best" Cantaloupe.

Per pkt. 10 cts. (net.), 1/4 oz. 25 cts., 1/2 oz. 40 cts., per oz. 75 cts., postpaid.

BEGONIAS

Single-Flowering Tuberos-Rooted

For planting in beds and where color effect is desired. Our stock of these bulbs will be found true to color and free from mixture.

Crimson	Rose	Salmon
Scarlet	Pink, Light	Orange
White, Pure	Yellow	Copper

Large bulbs measuring 1 1/4 inches and upward, separate colors or all colors mixed, doz. 35c., 100 \$2.25, 1000 \$20.00.

Double-Flowering Tuberos-Rooted

These can be depended upon producing 100 per cent. double flowers and contain very large and choice varieties.

Crimson	White, Pure	Yellow
Scarlet	Copper Bronze	Orange
Rose	Salmon	Light Pink

Large bulbs measuring 1 1/4 inches and upward, separate colors or all colors mixed, doz. 55c., 100 \$4.00, 1000 \$35.00.

CALADIUM

Caladium Esculentum—(Elephant's Ear)

Bulbs measuring 6 to 8 inches in circumference, 25c. per doz., \$1.50 per 100, \$10.00 per 1000.
 Bulbs measuring 8 to 10 inches in circumference, 50c. per doz., \$3.50 per 100, \$30.00 per 1000.
 Bulbs measuring 10 to 12 inches in circumference, 75c. per doz., \$5.50 per 100, \$50.00 per 1000.
 Bulbs measuring 12 to 13 inches in circumference, \$1.00 per doz., \$8.00 per 100, \$75.00 per 1000.
 Monster bulbs measuring 13 inches and upward in circumference, \$1.50 per doz., \$12.00 per 100.

Cinnamon Vine

Large size bulbs, 50c. per doz., \$3.00 per 100.

Callas, Spotted Leaf—Richardia albomaculata
 Very free Summer blooming variety, \$3.00 per 100, \$25.00 per 1000.

Hyacinthus Candicans—(Cape Hyacinth)

Large bulbs, \$1.50 per 100, \$12.00 per 1000.

DAHLIAS

The Leading Varieties for Florists

Price of named varieties of Dahlias, large divided clumps or roots, 10c. each, \$1.00 per doz., \$3.00 per 100, \$75.00 per 1000.

We can also furnish, without names, in mixture, all colors separate, or all colors mixed, as follows:

Mixed Pinks	Mixed Reds
Mixed Whites	Mixed Yellows

8c. each, 75c. per doz., \$6.00 per 100, \$55.00 per 1000.

Mixed, all colors.
 60c. per doz., \$5.00 per 100, \$45.00 per 1000.

Boddington's Quality GLOXINIAS

This popular flowering plant is coming into greater vogue than ever, not only as a pot-plant for house decoration, but also for cut-flower purposes. Our strains of Gloxinias are the true erect flowering type, grown by a specialist in Europe.

Blanche de Vera. White, rose-bordered.
 De fiance. Glittering crimson.
 Emperor William. Blue, white border.
 Etoile de Feu. Carmine-red.
 Kaiser Frederick. Scarlet, white margin.
 King of the Reds. Dark scarlet.
 Madame Helene. White, with violet crown.
 Marquise de Peralta. White, red-bordered.
 Mont Blanc. Snow white.
 Prince Albert. Deep purple.
 Princess Elizabeth. White, bordered blue.
 Princess Mathilde. White, with rose crown.
 Queen Wilhelmina. Dark rose.

Above named sorts, 65c. per doz., \$4.50 per 100, \$40.00 per 1000.

Boddington's Spotted Varieties, 75c. per doz., \$5.50 per 100, \$50.00 per 1000.

All Colors Mixed, 50c. per doz., \$4.00 per 100, \$35.00 per 1000.

Ismene Calathina—(Pencostium)

A grand Summer-flowering bulb, producing throughout the season large Amaryllis-like, pure white, fragrant blossoms. 75c. per doz., \$6.00 per 100.

GLADIOLUS

The Grand New Giant Gladiolus, **HOLLANDIA** (The Pink Branchleyensis). Flowers well arranged on a spike which attains a height of about 4 feet. Often as many as 30 blooms of a charming pink shade tinted yellow are open at one time. 50c. per doz., \$3.00 per 100, \$25.00 per 1000.

AMERICA. This beautiful new Gladiolus is likely to produce as great a sensation as the now famous Princeps. The flowers, which are of immense size, are of the most beautiful flesh-pink color, and as a florist who saw it said, it is "fine enough for a bride's bouquet." \$1.00 per doz., \$6.50 per 100, \$60.00 per 1000.

Augusta. The florists' best white Gladiolus in existence. First size bulbs, 1 3/4 inches and up..... \$2.00 \$18.00
 Bulbs 1 1/2 to 1 3/4 inches..... 1.75 16.00

1900. Nothing finer for florists' use. Flower is of a rich shade of red with very prominent white spots on three lower petals..... 2.00 15.00

Mrs. Francis King. One of the newer varieties of merit. Color of flowers is a light scarlet of a pleasing shade which attracts attention at once. Flowers are large and are borne on long spikes..... per doz. 75c. 4.50

Princeps. Color rich crimson, with broad white blotches across the lower petals. Flowers can be grown to nearly 8 in. in diameter under stimulating culture..... doz. \$1.50. 12.00

Groff's Hybrids (originator's strain). Extra-selected bulbs..... 1.50 12.00

Shakespeare. White and rose..... 4.75 45.00

May. Pure white, flaked, rosy crimson, the best forcer, selected bulbs..... 1.75 15.00

Branchleyensis (true). Piery scarlet, selected bulbs..... 1.50 13.00

(true). First size bulbs..... 1.25 10.00

Boddington's White and Light. Extra-selected bulbs, 1 3/4 inches and up.... 1.50 14.00

Bulbs 1 1/2 to 1 3/4 inches..... 1.25 10.00

American Hybrids. A mixture of the choicest varieties of Gladiolus in cultivation; very fine..... 1.00 9.00

Striped and Variegated..... 2.25 20.00

Pink and Rose shades..... 1.50 12.00

Orange and Yellow shades..... 4.00 35.00

Scarlet and Red shades..... 1.25 10.00

Lemoine's Hybrids..... 1.50 12.00

Childsii..... 2.00 18.00

Finest all colors mixed..... 75 7.00

Lily of the Valley

Large clumps of Lily-of-the-Valley for outside planting. These clumps will throw from 20 to 25 spikes of flowers. \$2.50 per doz., \$20.00 per 100. Cold storage valley all the year round, \$15 per 1000.

Dielytra Spectabilis—(Bleeding Heart)

Piety-grown, 75c. per doz., \$6.00 per 100.

JAPANESE IRIS

(Iris Kaempferi)

The collections which we offer are American grown, thoroughly acclimated and hardy and true to color and name, which is rarely evident in the imported Japanese stock. The Japan Iris will succeed anywhere in a good rich soil, though a moist position is preferable.

We offer 20 named single and double varieties.
 Price \$1.25 per doz., \$10.00 per 100, \$75.00 per 1000.
 25 at 100 rate, 250 at 1000 rate.

GERMAN IRIS

Named in the following eight varieties.

Africa. Dark blue.	Spectabilis. An early and free variety; deep blue.
Dr. Glock. Yellow.	
Helen. Blue.	
Henriette. Yellow.	Stella. Light blue.
Mme. Chereau. Pearly white, daintly edged lavender.	Velveten. Light yellow, lower petals purple-black.

75c. per doz., \$6.00 per 100.

HARDY JAPANESE LILIES

For Outdoor Planting, or Growing in Pots for Summer Flowering.

Lilium Auratum—(Golden-Rayed Lily of Japan)

Monstrous pure white flowers, thickly studded with crimson spots, each petal marked with a wide gold band. A good forcer and excellent for outdoor effect, being perfectly hardy.

8 to 9-inch, 225 in a case, 80c. per doz., \$5.00 per 100, \$45.00 per 1000.

9 to 11-inch, 125 in a case, \$1.00 per doz., \$8.50 per 100, \$80.00 per 1000.

11 to 13-inch, 100 in a case, \$1.75 per doz., \$14.00 per 100, \$130.00 per 1000.

Lilium Speciosum

Lilium speciosum album. Pure white; a grand variety. 8 to 9-inch bulbs, 225 in a case, \$1.00 per doz., \$7.50 per 100, \$70.00 per 1000.

9 to 11-inch bulbs, 125 in a case, \$1.75 per doz., \$12.50 per 100, \$120.00 per 1000.

11-inch and over, 100 in a case, \$2.50 per doz., \$20.50 per 100, \$200.00 per 1000.

Lilium speciosum Melpomene. Very rich crimson. 8 to 9-inch bulbs, 225 in a case, 75c. per doz., \$6.00 per 100, \$55.00 per 1000.

9 to 11-inch bulbs, 125 in a case, \$1.25 per doz., \$9.00 per 100, \$85.00 per 1000.

Lilium speciosum rubrum. White ground, spotted rose on each petal; very handsome. 8 to 9-inch bulbs, 225 in a case, 75c. per doz., \$5.75 per 100, \$55.00 per 1000.

9 to 11-inch bulbs, 125 in a case, \$1.25 per doz., \$8.50 per 100, \$80.00 per 1000.

11-inch and over, 100 in a case, \$1.75 per doz., \$12.50 per 100, \$120.00 per 1000.

PEONIES

The roots offered below are extra strong pieces, having 3 to 5 eyes each

Paeonia Officinalis Doz. 100

Rubra. Deep crimson; can be forced for Easter.....	\$0.75	\$6.00
Alba. White.....	1.25	10.00
Rosea. Rose; also a good forcer.....	1.00	7.50

Paeonia Chinensis—Double to Color

White Varieties.....	1.25	10.00
Pink Varieties.....	1.00	8.00
Red Varieties.....	1.00	7.50

Case containing 67 Double White, 66 Double Red, 67 Double Pink Peonias, very strong roots, 3 to 5 eyes, 200 in all, \$17.50 per case, 3 cases for \$50.00.

CANNAS, Our Selection

\$15.00 per 1000; \$1.75 per 100.

For your selection. Write for prices or see our recent advertisements in The Florists' Exchange, March 21, 1908, page 374.

TUBEROSES

Double Pearl. Red seal brand, selected bulbs, 4 to 6 inches in circumference, \$1.00 per 100, \$9.00 per 1000; 3 to 4 inch in circumference, 75c. per 100, \$6.00 per 1000.

Madeira Vines

Large bulbs, \$1.25 per 100, \$10.00 per 1000.

LENOX LAWN GRASS SEED

Absolutely free from all noxious weed seeds

This mixture is composed of fine-leaved dwarf-growing grasses, all of the highest quality re-cleaned seed. With proper preparation of the soil before sowing, it will produce a rich, velvety lawn, in six weeks, which will remain green throughout the year. This mixture has produced some of the most famous lawns in Lenox, Mass. We recommend sowing five bushels of seed to the acre. One quart of seed will sow 15x20 feet (300 square feet), one bushel 100x108 feet (10,800 square feet). Price, put up in handsome packages for store trade, \$10.00 per 100 qts. 75c. per pk., \$3.00 per bu. of 20 lbs.

For other varieties of Seeds, Bulbs or Plants, see our Wholesale and Retail Catalogue, from which latter a liberal discount is allowed. Mailed Free on application.

Arthur T. Boddington, 342 West 14th St. New York City

SPRING OFFER

Remember you may deduct 5% Discount if Cash accompanies Order

HARDY HYBRID PERPETUAL, CRIMSON RAMBLER and Other Roses

The right time to buy Roses is when they are fresh and well ripened. Roses potted up for Easter and Decoration Day are always good sellers.

Prices on Hardy Hybrid Perpetual Roses 75c. for 5, \$12.00 per 100, \$110.00 per 1000.

Hardy Perpetual Roses

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties true to name:

- Alfred Colomb. Carmine.
- Anne de Diesbach. Bright carmine.
- Ball of Snow. Pure white.
- Baron de Bonstetten. Dark crimson shaded.
- Baroness Rothschild. Satiny pink; extra.
- Captain Christy. Delicate flesh-color.
- Duke of Edinburgh. Bright vermillion.
- Fisher Holmes. Dark rich scarlet.
- Frau Karl Druschki. The finest white in existence.
- General Jacqueminot. Rich velvety crimson.
- John Hopper. Beautiful rose-pink.
- General Washington. Beautiful red, shaded carmine.
- La France. The finest light pink.
- Margaret Dickson. White, pale flesh center.
- Magna Charta. Clear rosy pink.
- Mme. Gabriel Luizet. Light, satiny pink.
- Mme. Plantier. White.
- Mrs. John Laing. Soft pink; most desirable variety.
- Paul Neyron. Beautiful dark pink.
- Prince Camille de Bohan. Velvety crimson.
- Ulrich Brunner. Cherry-red.

We also carry about 25 other varieties. Write for list and price.

The Grand Pink Rose, Mrs. Sharman Crawford

One of the finest Roses grown. Deep rosy pink, the outer petals shaded with pale flesh-color, white at base of petals, and distinct from all other Hybrid Perpetual Roses. 20c. each, 85c. for bundle of 5, \$15.00 per 100.

Baby Ramblers

The Tree Baby Rambler. Grown as a Standard.

The popularity of the Baby Rambler has suggested the growing of it as a tree or standard. The variety is too well known for description; enough to say, it retains all its characteristics of free-blooming qualities, etc. 35c. each, \$3.50 per doz., \$25 per 100.

THE BABY RAMBLER, Mme. Norbert Levassieur. Strong field-grown plants, \$1.25 for 10, \$12.00 per 100.

CATHERINE SEIMETH. A very important novelty. A White Baby Rambler Rose, larger and better flowers than the type. White with yellowish center. It has the true rose perfume in a high degree. 45c. each, \$4.50 per doz., \$35.00 per 100; extra strong, 60c. each, \$6 per doz., \$45.00 per 100.

ANNY MULLER. The Pink Baby Rambler, and bound to find favor where the Baby Ramblers are popular. 45c. each, \$4.50 per doz., \$35.00 per 100.

MRS. WM. H. CUTBUSH. A grand acquisition to the Baby Rambler class. Color intense crimson, and exceptionally free-flowering. 25c. each, \$1.00 for 5, \$18.00 per 100.

BABY DOROTHY. The same in habit as Baby Rambler, but the color of the flowers is similar to Dorothy Perkins. This variety has created quite a sensation when exhibited at the English National Rose Society and other shows. "Baby Dorothy," when planted out, flowers perpetually from Spring until Autumn. It makes an excellent pot plant for forcing. Price for strong, field-grown plants, 50c. each, \$2.00 for bundle of 5, \$35.00 per 100.

English Moss Roses

Assorted, White, Pink, Red. Large dormant plants, from open ground. 10c. each, 85c. for 5, \$12.00 per 100.

Standard, or Tree Roses (Grafted on Rosa Canina or Rugosa Stock)

Large, well-grown, selected plants in the best and most serviceable varieties. 35c. each, \$3.25 for 10, \$25.00 per 100.

Manetti Stocks for Grafting

Selected English stock, best quality, \$1.50 per 100, \$12.00 per 1000.

HYBRID TEA, or Everblooming Roses

Hybrid Tea, or Everblooming Roses are becoming more popular every year. As hardy as the perpetuals, with slight protection in Winter, they give a wealth of bloom all through the Summer months and late in the Fall till frost checks them.

THE GRAND NEW ROSE LYON. Originated by the raiser of Etoile de France. Perpetual flowering. Vigorous grower. The blooms are very large, with broad petals, full and globular in form; shrimp-pink at the ends of the petals, center coral red or salmon-pink shaded with chrome-yellow. Very fragrant. \$1.25 each, \$6.00 for bundle of 5, \$12.00 for 10.

THE KILLARNEY ROSE. This is a grand Rose for either indoor or outdoor cultivation; is a strong grower, and the blooms, which are of a beautiful pink, are borne in great profusion. Strong, 2-year-old field-grown stock. 25c. each, \$1.00 for bundle of 5, \$18.00 per 100.

MAMAN COCHET ROSES. The best of all Roses for Summer-flowering and cutting.

Maman Cochet (Pink). Color a clear, rich pink changing to silvery rose; very double and fragrant.

Maman Cochet (White). A sport from the above, with all its characteristics; color a beautiful snow-white, at times tinted with the faintest suggestion of blush, the same as is often found in the Bride. 25c. each, 75c. for bundle of 5, \$12.00 per 100.

ROSE, ETOILE DE FRANCE. Flower large, possessing petals of very good substance; magnificent cupped form. Superb crimson-red velvet, the center of the bloom vivid cerise-red. The flowers are very fragrant and last very long. **The Queen of the Everblooming Red Roses.** The most free-blooming and vigorous Red Rose ever introduced. Strong 2-year-old plants, field grown, 25c. each, \$1 for bundle of 5, \$18.00 per 100.

GRUSS AN TEPLITZ. No Rose in commerce can compare with Gruss an Teplitz as a bedder. It is a perfect sheet of richest crimson-scarlet all Summer. A strong, vigorous grower. Hardy. 20c. each, \$1.50 per 10, \$12.00 per 100.

Popular Hybrid Tea Roses

American Beauty, Kaiserin Augusta Victoria, Clothilde Souper, Caroline Testout, Hermosa. 20c. each, 75c. for bundle of 5, \$12.00 per 100.

RAMBLERS and other Climbing Roses

HIAWATHA. A seedling from Crimson Rambler. The flowers are single, and are of a deep, intense crimson shade with the petals shading to a pure white base. Foliage dark glossy green. Flowers very freely. It is an excellent plant for forcing. Extra strong, 3-year-old field-grown, flowering plants, \$1.00 each, \$5.00 for 5; 2-year-old, strong plants, each 50c., \$2.00 for bundle of 5.

WEDDING BELLS. A seedling of the Crimson Rambler. The most floriferous Rose yet produced. The color is white with the upper half of the petals soft pink. Fine for forcing. Perfectly hardy. Extra strong 3-year field-grown flowering plants, \$1.00 each, \$5.00 for 5.

LADY GAY. Cherry-pink, fading to a soft white. Each 25c., \$1.00 for 5, \$18.00 per 100; extra strong, 3-year plants, each 75c., \$3.50 for bundle of 5.

NEW CLIMBING ROSE, TAUSENDSCHON ("A thousand blooms.") Result of crosses between Crimson Rambler with Tea and Polyantha Roses. Soft pink, 50c. each, \$2.50 for 5.

CRIMSON RAMBLER ROSE. American-grown. We can supply extra-strong 2-year-old plants grown on their own roots, at the following prices: 3 to 4 ft., 15c. each, 65c. for bundle of 5, \$12.00 per 100; 4 to 5 ft. long, 20c. each, \$1.00 for 5, \$15.00 per 100; 4 to 6 ft. long, 25c. each, \$1.15 for 5, \$18.00 per 100.

DOROTHY PERKINS. Resembles the Crimson Rambler, except in color, which is a lovely shell-pink. 15c. each, 65c. for 5, \$12.00 per 100.

NEW CLIMBING ROSE, CLIMBING FRAU KARL DRUSCHKI. This is a climbing sport from the well-known snow-white, Frau Karl Druschki, and should become very popular. Good, strong plants are offered as follows: \$1.00 each, \$5.00 for 5.

Other Climbing Roses of Merit

PAUL'S CARMINE PILLAE. Flowers large and free; color rosy carmine. Two-year-old, field-grown, 15c. each, 65c. for 5, \$12.00 per 100.

MARECHAL NIEL. Color bright, rich golden yellow. Field-grown, 15c. each, 65c. for 5, \$12.00 per 100.

OLOIBE DE DIJON. Color buff, orange center, very sweet-scented. Field-grown, 15c. each, 65c. for 5, \$12.00 per 100.

Well-Known Climbers

Mme. Plantier. White.
Baltimore Belle. Pale blush color.
Prairie Queen. Red, changing to pink.
Seven Sisters. Clear pink.
15c. each, 65c. for 5, \$12.00 per 100.

White Rambler (Thalia)
Pink Rambler (Euphrosyne)
Yellow Rambler (Agla)
Similar to Crimson Rambler, except in color.
Extra-strong 2-year-old plants, 20c. each, 90c. for 5, \$15.00 per 100.

HARDY SHRUBS and CLIMBERS, etc.

Ampelopsis—Strong Dutch-Grown

Ampelopsis Veitchii (Boston Ivy). Extra strong imported vines, 3-year-old, \$2.00 per doz., \$15 per 100.

Ampelopsis muralis. More rapid grower than the foregoing; large foliage, \$2.50 per doz., \$18.00 per 100.

Quinquefolia (American Ivy, or Virginia Creeper). Good for covering walls, verandas, or trunks of trees; affords shade quickly, 25c. each, \$2.50 per doz., \$18.00 per 100.

Clematis

Henryi. Pure white; extra large.
Jackmani. Purple.
Alba. White.
Sieboldii. Lavender.
Ville de Lyon. The finest of all reds; flowers brilliant carmine-red. It is equally as good as Mme. Edouard Andre, but contrary to this one, is a very free-growing variety.
All the above Clematis in extra-strong plants, 30c. each, \$3.00 per doz., \$20.00 per 100.
Clematis paniculata. Strong 2-year-old plants, \$1.50 per doz., \$12.00 per 100.

Azalea Mollis

Most attractive in the shrubbery; also extensively forced on account of the brilliancy of colors. \$4.00 per doz., \$30.00 per 100.

Japanese Fern Balls—Immediate delivery.

Fern Balls. 7 to 9 inches in diameter, \$2.50 per doz., \$20.00 per 100.

Aristolochia Sippo

Dutchman's Pipe. Strong field-grown, each 45c. \$4.50 per doz., \$35.00 per 100.

Wistaria Sinensis—Extra strong field-grown plants

Blue. \$5.00 per doz., \$40.00 per 100.
White. \$5.00 per doz., \$40.00 per 100.

Honeysuckle

Very extra-strong, Holland field-grown plants. 5 to 6 feet long, many branches.
Coccineum. Scarlet.
Halliana. Yellow.
Periclymenum. White.
Serotinum Belgica (Monthly Dutch). Red.
75c. per doz., \$30.00 per 100.

Kudzu Vine

The quickest climber known in horticulture grows 1 to 2 feet per day. Invaluable for quickly covering unsightly objects. Strong roots, 15c. each, \$1.25 per doz., \$10.00 per 100.

Hydrangea Paniculata Grandiflora

Two-year-old, 3 to 4 branches. Bushy. \$1.50 per doz., \$10.00 per 100.

Tritoma Pfitzerii

This is one of the best herbaceous plants for Summer cutting, an everblooming type of the old "Red-Hot Poker." Cut blooms displayed in a florist's window never fail to attract the attention and admiration of the general public. Blooms freely from July until frost. Field-grown roots, \$1.25 per doz., \$9.00 per 100.

Arthur T. Boddington, 342 West 14th St. New York City

Yucca Aloifolia and Other Matters.

Editor Florists' Exchange:

Referring to Mr. Mehan's notes in regard to yuccas, page 239, I would suggest that atmospheric influences have a great deal to do with the hardiness of certain plants. The yuccas native to dry hills are less hardy in the humid air of the salt water sections than on the hills of the southern interior, while plants like figs are far more hardy near the salt water than in the interior much farther South. Figs will get hurt at Raleigh, N. C., when they are not at all injured at Old Point Comfort, Va.; and right across the Chesapeake from your St. Mary's County correspondent I have seen fig

and the roots of *Plumbago capensis*, covered with snow, escaped and grew and bloomed finely the next season. *Metrosideros* also survived, and *Oleo fragrans* hardly lost a leaf. I saw this bush of *Oleo fragrans* recently, and it is still flourishing, directly exposed to the north-west winds, but screened from the morning sun, and is now partly shaded by a large plant of *Photinia serrulata*, which was in bloom when I saw it in early December. It never fruits there of course, but makes a very handsome broad-leaved evergreen.

The tall yuccas about Norfolk, Va., are usually *hacata*. *Gloriosa* and *recurvifolia* should be hardy with your Maryland friend, but I doubt the hardiness of *aloiifolia*. I had the variegated form of this at Raleigh,

northern natural limit at Old Point Comfort, Va.; and in the shrubbery sheltered from Winter sun he could grow well some of the more hardy Chinese azaleas such as *alba* and *Phenicia*. In Central North Carolina *Gardenia florida* flourishes finely on the northeast front of a building, but loses its leaves and often gets cut down if exposed to the morning sun. All the more tender broad-leaved evergreens are better sheltered from the morning sun.

W. F. MASSEY.

Our London Letter.

THE ROYAL GARDENS, KEW.—I have paid periodical visits to Kew for the past 30 years, and during this time I have seen many alterations and improvements. At one time trade growers looked upon Kew Gardens as affording but little help or instruction to those who grow for commercial purposes, yet to those who cared to investigate there was always something to learn; at least I found it so. And of recent years much of the work done there has led to owners of private gardens following the example and has created trade. The grouping of plants which under natural conditions are found growing together has been made a great feature. The bamboo garden, with all the species arranged together, is far more interesting than if they were dotted about among other subjects. The illustration gives some idea of the effect of these graceful plants grouped together. It was from seeing the bamboo garden at Kew that induced Leopold de Rothschild to have the beautiful Japanese garden made at Gunnersbury House. Here not only bamboos but many other Japanese shrubs, bulbs, etc., are grown and all visitors admire this more than any other part of the well-kept gardens. Others have also planted bamboos extensively and growers who were fortunate enough to have a good stock have done a good trade.

The rock garden is another great feature, and since its formation the example has been followed in many private gardens. Messrs. Backhouse & Sons' fine rockery was an earlier example, but where one saw it hundreds have seen the Kew rockery. No garden of any size is now complete without a rockery, and those who have taken up the culture of alpine have found it a profitable enterprise.

Rock gardens have become quite an important feature at our flower show. At the Temple show last year there were rockeries of all sizes, from those which might be arranged in quite small gardens, to the large pile arranged in the open by Messrs. Cutbush & Sons. This had a large pond for aquatics at its base and the effect was quite unique. In fact the rock gardens attracted as much attention as did the grand exhibits of orchids and quite a good business was done by the exhibitors.

GLOXINIAS.—Considerable improvement has been made in gloxinias during the last few years, and it is now no longer necessary to trouble about named varieties, for from carefully selecting the seed plants for a number of years we get equally good flowers and a great variety of the best colors from seed, and the seedlings make better plants than those propagated from leaves or cuttings. We do occasionally see some at exhibitions that have been grown under shade and too much heat, but most growers now expose them more to the sun and give them less heat, with the result that the plants make sturdy growth and the flowers are of better substance. More loam and manure are used, instead of so much peat and leaf mold. The illustration represents plants as grown by Messrs. Peed & Son, who have shown them well during the season.

A. HEMSLEY.

Gloxinias as grown by Messrs. Peed & Son, Norwood, England.

trees on the shores of Tangier Sound into which two of us climbed, while I never saw a fig tree in the central part of North Carolina which would be strong enough for any one to climb up in.

Yucca Treuleana is hardy at Raleigh when the stem is allowed to be clothed with dead leaves; but I once stripped the stem of a plant bare; the Winter following was the unusually severe one of 1893-4, and the plant was frozen off at the ground, while the top seemed unhurt and made a strong cutting, and the plant again started from the root and never was hurt afterward, for I let the old leaves remain to protect the stem.

In all the upper South certain plants may be considered hardy, and yet there will come an occasional Winter, or spell such as that which destroyed the orange trees in Florida, when these plants will get killed. I had in Raleigh plants of *Pittosporum tobira* six feet high and on the same lawn oleanders. The Winter of 1893-4 killed the *pittosporums* entirely, while the oleanders were killed to the ground, but grew strongly the next season. What struck me as odd was that the variegated form of *pittosporum* was not killed, only singed,

sheltered from the north and west by a brick building; but I doubt its hardiness there if fully exposed to sun and wind.

I expect that your Maryland correspondent will find that his pomegranates have been cut by the cold snap we had some time ago. They are cut here, in a similar and rather milder climate, for the climate east of the bay is generally much milder than in the same latitude west of it. At Raleigh I had a *justicia* planted just outside of the brick wall of the cellar where the big boiler was located that heated the greenhouses, and, of course, that wall was always warm and tempered the ground outside so that it never froze. That *justicia* grew in the Spring from the roots, but it would not do for me to say that *justicias* are hardy there, for they are far from being so.

I do not believe that Mr. Hodgson can grow *Yucca Treuleana* in his location. The humidity of the air would make it more susceptible to the cold. I believe he can grow the *photinia*, *Ilex Cassine* and *glabra* and, perhaps, *Oleo fragrans* and a few other broad-leaved evergreens, such as *Ligustrum lucidum* and *ibota*, *Magnolia grandiflora* and the live oak, which last reaches its

Entrance to Rock Garden.

At Kew Gardens, London, England.

The Bamboo Garden.

Hardy Perennial Plants

All the following, and many others, are fully described in my special List of Hardy Perennial Plants. It is an elegant, richly illustrated book of 60 pages—mailed free. Send for special trade list giving details. Write for 1000 rates of any variety wanted in quantity. Where no size is stated, they are first class field-grown stuff.

ACHILLEA Millefolium roseum ... 10 100	HEMEROCALLIS flava, Lemon Lily ... 10 50	PHYSTOCODON virginica and alba ... 10 50

ROSES

THE RECENT DECISION ON ROSE CUTTINGS.—With reference to the recent decision of the United States court of appeals, second circuit (suit 1800), United States v. American Express Company, involving the classification of rose cuttings, the Treasury Department has written to the Collector of Customs at Buffalo, N. Y., as follows:

"The Department is in receipt of a letter from the Attorney-General in which he states that no further steps will be directed in suit 1800, United States v. American Express Company, which was recently decided by the United States circuit court of appeals for the second circuit adversely to the Government.

"The merchandise in suit consisted of certain rose cuttings that had been put in sand in preparation for shipment. They were assessed with duty under paragraph 252 of the tariff act as rose plants, and were held by the Board, the circuit court, and the circuit court of appeals to be properly dutiable under the said paragraph at the rate of 25 per cent. ad valorem.

"In view of the foregoing, you are hereby authorized to forward the usual certified statement for the refund of duties exacted in excess in settlement of this case."

Commercial Rose Growing.

BY EBER HOLMES.

(Concluded from page 385.)

After planting we give a thorough watering around the plant without wetting the whole bed, and after that we give no more water for from one to three weeks, as the case may require, but rely on syringing and cultivating to keep things moving. Keep the soil stirred once a week among newly planted stock; it can be done quicker than the weeds can be pulled out, which come if the soil is not scratched over, and is of incalculable benefit to the plants. As soon as the planting is finished, all left-over stock can be planted out in the field where it will take care of itself, and unless required, it can be left there until just before the ground freezes in the Fall, when it can be brought in and potted or planted thickly on a bench in a cool house, where they will make good plants for Easter or Memorial Day. If lifted about the first of September they will make acceptable plants in pots for Christmas. Liberty makes a splendid rose for this purpose. If established in pots in the Summer, treated as a hybrid in early Fall, it can be well flowered for Christmas.

If needing room now for replanting, any healthy plants to be dug up, if potted, will be fine for Memorial Day. Last year we had 800 plants of Liberty in a house with Bride and Bridesmaid; they did well up to Christmas, after that they refused to work. About the first of March we trimmed the weak wood out of them, and as they grew kept them pinched back until the 15th of April. Between the 15th of May and the 15th of June we cut over 10,000 good flowers from these plants. About eight weeks before Christmas is late enough for the final pinching back for Christmas flowers. This method of holding back flowers is not so new as some may imagine, as it was practiced in the Middle West twenty years ago.

Carrying over plants.

In regard to drying off plants to be carried over to another year, it seems as if more harm is done by too much drying off, than otherwise. The beds will dry naturally in the heat of the Summer, the wood should never shrivel and foliage should be syringed enough to keep down spider. This Summer treatment is where local conditions and soils call for different treatment.

Syringing.

Syringing is another operation which calls for discretion. Is it paradoxical when we read, "do not let roses get soft," and "do not let them get hard," in notes written on the subject? The softness to

Hardy Roses

American Grown—Superior to Imported

We have unsold at the present time the following varieties—all field grown plants, grown in our nurseries at Rochester, N. Y.:

- Anne de Blesbach

Vines var., strong and prime, R. C., \$1.00 per 100; \$9.00 per 1000; 2 1/2-in., \$2.50 per 100; \$22.50 per 1000; 3 in., \$4.00 per 100; 4 in., \$6.00 per 100.

LEEDLE FLORAL COMPANY, SPRINGFIELD OHIO

be avoided is of the foliage and young shoots caused by insufficient air, too much fire and syringing; the hardness to be guarded against is of the older wood caused by a too low temperature and not enough syringing. How this operation varies with the seasons! Commencing now with the increasing sun and still lots of fire heat at night, evaporation is rapid and good heavy syringings are in order to keep the foliage clean and large. Special attention should be given to the ends of the benches where pipes may be nearer the plants, and dry walks should be damped down every day. If a general syringing is not given every day, the plants should at least get a spraying through the bottom from every other walk. I believe in afternoon syringing in the Summer time, especially for young and replanted stock. I would not do this later than four o'clock, and not on cold or wet days, and would discontinue it as soon as the nights get cool. As the Fall approaches, it must be done early in the morning, so that the plants can dry off before night, or mildew and black spot will soon make their appearance. In the Winter when the plants will not dry, the syringings have to be cut down to about one a week, and even then some varieties have to be shaken to remove the surplus moisture, or they remain wet over night. At this time we rely on frequent damping down of the walks and boards, combined with spraying through the bottom of the plants, to keep the wood soft and induce it to break.

Disbudding and Mulching.

Disbudding is another thing which must be done at the right time. When the plants are growing fast, they should be gone over at least every other day.

Mulching is another important matter; right now is the time to apply a coating if not already done, if good flowers are wanted for the next three months. I believe that September 1 is late enough to mulch for Christmas flowers. If applied later when the days are shortening, it is difficult to dry out the plants and make them break properly. We apply a light dusting of bone flour, about 100 pounds to 2,000 square feet of bench surface, and then for the same space, from one-half to three-quarters of a cord of good cow manure chopped up with dry loam and a little lime. In a few weeks this becomes a part of the bed, as it will crumble and can be leveled down and is in good condition later to receive liquid manure. If top dressing has to be done later, I would lay it in ridges rather than blanket the whole bench with it. We find pails of wood or zinc the handiest things to use for applying top dressing. Here again, five or six men can work together to good advantage, and will cover about 5,000 square feet in a day.

Fumigation and Ventilation.

Fumigation must be attended to regularly, and the proprietary articles sold are cheaper in the end than the old-fashioned tobacco stems. A little sulphur should always be kept on the pipes to keep down mildew, always remembering that prevention is better than cure. When flowers are not selling well, the plants require particular attention, as poor stock is of no value in a falling market.

Ventilation is of the utmost importance in rose growing. Commencing now with the warm Spring days approaching, a little air should be given early in the morning. Soon the temperature will begin to rise before 7 o'clock, and if air has not been carried all night, the night man can put on a little on his last round. I like to anticipate the rise, and by frequently raising the ventilators a little, always keep ahead of the game, and by this method, the houses never get so hot in the Springtime and the plants are kept healthy and clean.

It is important that the houses be kept clean at all times, with no muddy places or water standing in the walks, especially when the firing is reduced to a minimum.

Cutting the Flowers.

The flowers should be cut as early as possible in hot weather and be placed at once in clean water. It is noticeable that every man's stamp is on his own products. A man handling roses in a store can tell you without any distinguishing mark who grew this lot, or where these flowers came from.

New Varieties.

In conclusion, a few words about the new varieties. It is the part of wis-

5000 CANNAS

LOUISIANA, beautiful dark red, orchid-flowering, strong roots, with 2 and 3 eyes, \$6.00 per 100; 200 for \$10.00.

20,000 DWARF BOXWOOD for borders.

10,000 MAHONIA AQUIFOLIA, 3 year old.

Also fine lot of small shrubs; a real occasion for landscape gardeners.

For particulars write to

THE CEDAR HILL GARDENS SEA CLIFF, L. I., N. Y.

dom to go slow unless you know what they are. Descriptions are often misleading, and the only way to find out is by experience. Take No. 1 for instance. A friend writes me, I intend to plant 5,000 plants of this, and by the way, I have not heard of any fault which this rose has. No. 2 on the list he thinks enough of to put in 2,000 plants. I saw this exhibited some time ago and remarked to a friend that the flowers did not look perfect. He thought that this rose would produce a large percentage of deformed flowers. Speaking to another man who had seen the flowers, and asking his opinion, he said the flowers looked as if they had been fumigated. Take No. 3, which I picked out for a winner; looking over a large place recently, I had pointed out to me two plants growing on the end of a bench, and was asked why they did not grow like the others which were a standard kind, and growing luxuriantly. I could not tell why; they all looked exactly alike, the chances were in favor of the two plants doing nothing; the answer was, "Those are No. 3." I said things then which I will not repeat here, for I had ordered a few of that kind. Take No. 4, condemned by several good growers. I asked one large grower what he thought of it, and he said, "I have ordered it and wish that I had not." The next man says, "Don't believe all he tells you."

I think that undoubtedly, when White Killarney comes on the market, if it proves to be a good shipper, it will be an acquisition, as it possesses the good growing qualities of its sister, Killarney.

In seeking information, after asking several questions of a friend, I finally asked him one, and I think that he truthfully replied, "That's what I am trying to find out;" so with us all. If I have helped anyone here with these few remarks, I am thankful, and hope to hear something from others of benefit to myself.

NEW CANNAS 1908

ROSEA GIGANTEA

This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2 1/2 inches across, color, a deep rich rose, almost a coral carnation. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. A great favorite with visitors to our trial grounds. Strong plants, \$2.00 each, prepaid, \$18.00 per doz. by express, not prepaid.

GLADIO-FLORA

Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS

(1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze.

60 other Varieties. Send for list and prices

THE CONARD & JONES CO., West Grove, Pa.

each other thus that a very attractive appearance to the flowers. Color is cream, changing to carnation rose with an intense edge of gold to each petal. Height 3 1/2 feet. Fine, strong plants, \$2.00 each, prepaid, \$18.00 per doz. by express, not prepaid.

CANNA METEOR

Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich, each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Fine, plants of dormant roots, 75c. each, prepaid, \$6.00 per doz., by express, not prepaid.

Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. Those who tried Wm. Saunders in 1907 say it cannot be excelled. We offer plants only: 60c. each, prepaid; \$5.00 per doz., \$35.00 per 100, by express, not prepaid.

J. P. CANNATA, MT. FREEDOM, N. J.

Plant Notes.

SHOW POLARONIUMS.—Large, well-grown plants of show polaroniums make a striking display when in full bloom. Small and medium size plants, although as decorative subjects not so desirable as much larger specimens, are nevertheless very useful because of the bright effects they are capable of producing when numbers of them are made the most of possible. Cuttings of show polaroniums taken off plants that have bloomed and inserted singly in 2½ or 3-inch pots which had previously been filled with loam and old rotted manure, will root freely in a temperature of 60 degrees. When inserting the cuttings it will be well to put a little sand at the base of each. When the cuttings are rooted and proceed to grow freely the tops should be pinched. Later, when they have made further growth and filled their pots with roots, they should be shifted into pots at least two sizes larger; the soil at this stage should consist of loam and a small proportion of well rotted manure, with the addition of a sprinkling of bone meal. The potting should be done firmly. The plants should be given a light, airy situation close to the glass, in frames where in Summer the lights may be removed, but remain at hand to be put on again for the protection of the plants from chilly night air and cold rains. By early Fall, and perhaps before, the flower trusses will be noticeable in the points of the shoots, and a crop of bloom can be had from these early plants by placing them in heat near the glass in a light, airy position. These plants worked in this way may be made to yield a succession of flowers all through the Winter. When the stems of old plants have turned yellow cuttings should be taken off them for later bloom, and by this means have these beautiful plants flowering in succession all through the Winter and into the early Summer.

SWAINSONA GALEGIFOLIA ALBA is an exceedingly serviceable plant, but it is perhaps more emphatically so to retail florists. This plant thrives well in a moderately warm greenhouse. When grown in pots of any size or when planted out in benches, it flowers freely, even in small pots. The graceful and delicate green foliage of the swainsona along with and in contrast to the pure white flowers makes it very desirable for various florist uses. Cuttings may still be rooted and grown into serviceable plants before much of the Summer is gone. When the plants are in 3-inch pots they may be planted in frames outdoors, where with some little protection from high winds they will yield an abundant supply of flowers until cold weather sets in in the Fall.

BOUGAINVILLEAS are easily propagated and easily grown into very useful stock. They are not at all particular in regard to conditions of soil or temperature. They can be brought into bloom easily and without much preliminary preparation, such as is necessary in the cases of many things of less merit as far as satisfactory results are concerned. Bougainvillea cuttings may be struck in April from half-ripened wood. The wood should be cut up into 6-inch lengths, placed in sand over bottom heat and given a good watering; afterward frequent sprinkling or syringing will afford the necessary moisture. The cuttings should be shaded from the sun during the time of each day when its rays would injuriously affect them. The cuttings will under ordinary conditions have rooted in about three weeks, when they should be taken out of the sand and placed in small pots filled with good loam containing a liberal sprinkling of clear sand. After the first potting it will be well not to give them very much water at the root for a week, but instead, to syringe them twice daily, and protect them from the sun by some shading. When the young plants get established they grow and make roots rapidly, and should therefore be shifted just as frequently as the condition of the roots require it. They should be continually kept in full sunlight, regularly syringed and supplied with abundance of water, and in order that the roots may be always healthy plenty of drainage should be placed in the pots. Plants of every kind placed closely together on benches are benefited by occasionally turning them around, or, to admit every branch or member to get the advantage thereby afforded of light; this is especially the case with bougainvilleas, because of the necessity of having wood of sufficient substance and ripeness for flowering.

Good plants with well ripened wood can be had by the latter end of October; then by a gradual withholding of water they can be rested for a brief period and then started into growth for Winter bloom. The plants may be treated to rest in batches in order to have bloom continuously after a certain time.

STEPHANOTIS FLORIBUNDA.—Like many other beautiful flowering plants which have for years suffered more or less neglect, *Stephanotis floribunda* is now commencing to receive the recognition its merits deserve. This plant is not at all hard to grow, neither is it such a cumbersome addition to the interior of a greenhouse as seemed to be commonly supposed, even when grown in the way in which it thrives most satisfactorily; i. e., on a roof. Guided along on wires attached to a roof it does not obstruct the light greatly, because its characteristics of growth in foliage and stem are such that a great deal of space is not occupied by it.

Stephanotis thrives best when planted in a border and the growth trained along close to the glass, but it will grow and flower freely when planted in a bench, tub, or pot and the wood disposed of as circumstances in the case allow. The really exquisite odor and snowy whiteness of the flowers, along with their attractive shape and large size, will compensate for the labor necessary to produce them.

This plant is quite easily propagated by means of cuttings from last season's growth. When the cuttings are in course of preparation a clean cut should be made just below a pair of leaves, but these leaves should not be removed. Each cutting should then be inserted in a small pot containing sand and leaf mold, or sand and peat in equal proportions. The pots with the cuttings should be plunged in the sand in the propagating bench over a good bottom heat, well watered about the second or third day after they are put in, and kept shaded until they begin to root. A humid atmosphere will keep the cuttings from wilting during the day or two water is withheld. As soon as the pots are fairly well filled with roots a shift into larger pots will be necessary. A good compost at this stage will be one containing good fibrous loam two parts, one part coarse sand and one of charcoal, with the addition of a little bone meal. At all times when repotting the plants it will be well to supply the pots with ample drainage and make the newly added soil quite firm around that in which the roots are already. When the plants are in active growth, after being repotted the points should be pinched in order to induce the plants to push out a few shoots from near their base. Repotting and stopping, as growth warrants, should be continued all through the first Summer, but not later. The second year the plants may be repotted twice—in February and June or July. After the second year one repotting when growth begins in Spring will be sufficient, and then later, when they have increased enough in size, they will remain in a healthy condition indefinitely if given an annual topdressing with matter containing nutriment.

DRACAENAS.—In the early days of Spring young dracaenas make rapid growth, when in addition to the forces of nature they are helped along with the artificial heat in the greenhouses. I do not know of many other plants that respond so readily to the proper degree of bottom heat and a moist atmosphere as dracaenas do, nor do I know of many plants that fail so utterly as the finer colored dracaenas when subjected for an extended period while young to dry atmospheric conditions and a low temperature, especially when bottom heat is lacking.

Young dracaenas should be kept growing and given more pot room when their roots show the need of it until they have attained the stage when a larger size is undesirable for reasons of commercial policy. The plants should be syringed frequently, and to make the work as effective as possible it will be well so to manipulate that the force of the water will reach the foliage from underneath as well as over the top. An occasional sponging is without question of much benefit to the plants at all stages of their growth. D. M.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6½ inch pots at 75 cents each, 25 or more at 70 cents each.

This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kiff Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

FERNS

MY SPECIALTY

I have an immense stock of assorted ferns for jardinières, healthy and bushy, none better; in 15 of the best market varieties, including *Cyrtomium Falcatum*, *Aspidium Tsussemense*, *Pteris Wimsettii* and *Mayii*, in good proportion, from 2½ in. pots, \$3.00 per 100; \$25.00 per 1000; 500 at 1000 rate.

PLANT CULTURE Price \$1.00

The best book for the Plant Grower.

A. T. DE LA MARE PTG. & PUB. CO. LTD. 2 to 8 Duane St., NEW YORK

LIST OF ADVERTISERS

Table listing various advertisers including florists, nurseries, and suppliers from different locations. Includes names like 'Alpena Plant Home', 'Aurora Nursery', and 'Harris, Ernest'.

Table listing florists and suppliers with their addresses and phone numbers. Includes 'Good Geo.', 'Hennrich & Son', and 'Harris, Ernest'.

INDEX TO STOCK ADVERTISED

Index listing various types of plants and their prices. Categories include 'Nursery Stock', 'Orchids', 'Palms', 'Pansies', and 'Petunias'.

CARNATIONS

Table listing carnation varieties such as 'Ruffled Cutting', 'Elate Healthy', and 'READY NOW!' with their respective prices.

CHRYSANTHEMUMS

Table listing chrysanthemum varieties like 'A. J. Balfour', 'Autumn Glory', and 'Ada Smoulding' with prices.

ASPARAGUS

Table listing asparagus varieties such as 'Sprengeri' and 'Plumose Nanus' with prices.

VERBENAS

Table listing verbena varieties like 'Best Mammoth' with prices.

WOOD BROTHERS, Fishkill, N. Y.

Contents

Table of contents listing various articles and topics such as 'American Rose Society Proceedings', 'Nursery Department (Illus.)', and 'Retailer's List'.

GERANIUMS

Table listing geranium varieties like 'Ruffled Cuttings', 'TREGO, CASTELLANE', and 'VIAUD, CHARLOTTE'.

PETER BROWN, Lancaster, Pa.

CLEAR'S HORTICULTURAL CO.

Text for CLEAR'S HORTICULTURAL CO. listing products like 'Wholesale, Jobbing, Contracting' and 'Auction, Horticultural Products'.

CANNAS

Text for CANNAS section mentioning 'Strong Dominant Roots' and 'GRAFTED ROSES'.

OWN ROOTS

Text for OWN ROOTS section listing various rose varieties and their prices.

MISCELLANEOUS

Table listing miscellaneous plants and supplies like 'Ageratum', 'Cope's Pet.', 'White Cap', 'P. Pauline', etc.

FRINGED Double Petunias

Text for FRINGED Double Petunias section, mentioning 'GEO. J. HUGHES, Berlin, N. J.' and 'Cash with order, please.'.

GERANIUMS

Text for GERANIUMS section mentioning 'Small, thrifty, from pots.' and 'DANIEL K. HERR, LANCASTER, PA.'.

GERANIUMS

Text for GERANIUMS section mentioning 'Heteranthe', 'Grant', and 'Nutt, strong'.

TAKE NOTICE

Text for TAKE NOTICE section mentioning 'CARNATIONS' and 'NEW YORK, Henry Nungesser'.

FOUNDED IN 1888

Weekly Medium of Interchange for Florists, Nurserymen
Seedsman and the Trade in General

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president; Jas. H. Griffith, secretary; David Touzeau, treasurer; Alex. Wallace, editor. The address of the officers is the address of this paper.

P. O. Box 1697, NEW YORK. Telephone 3765-6 Beckman.

CHICAGO OFFICE: 4543 Cottage Grove Avenue.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Price on application.

YEARLY SUBSCRIPTIONS.

United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by express Money Order, Draft on New York, Post Office Money Order or Registered Letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

REGISTERED CABLE ADDRESS:

Flores, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25; special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. U., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

Addresses Wanted.

We have on hand a check, dated February 25, 1908, for one dollar on the First National Bank, Mamaroneck, N. Y., signed by Mills & Co. Will the senders of the check kindly communicate with us and state the purpose to which the dollar is to be applied.

We should be pleased to be informed of the present address of A. L. Poundstone, formerly of San Francisco, Cal. He was last heard from in Oakland, Cal.

At the Spring show of the Massachusetts Horticultural Society last week, an expert gardener was in constant attendance to answer questions and furnish information to visitors concerning exhibits. This is an excellent plan, which should be put in operation at all flower shows. Too much indifference along this line has been exhibited in the past, to the disadvantage of all concerned. The seekers after information at our exhibitions are numerous and their requests for knowledge should certainly be satisfied as far as possible. Particularly should the representatives of the daily newspapers receive all consideration in this respect; in many instances these parties are completely ignored, with the result that their efforts as printed are often the subject of adverse criticism by the practical reader, for which flower show authorities and not the press men and women are solely responsible, on account of the inattention the latter receive. Our exhibitions will only reach their highest educational value when those in charge of such exhibitions see to it that the largest amount of a correct information concerning the subjects displayed is cheerfully, willingly and fully given to all who desire it.

The Rose Society's Membership.

In his address before the American Rose Society at its annual convention this week President Robert Simpson of Clifton, N. J., made the following frank statement: "Practically every grower of repute who has had his attention called to the aims and purposes of this organization has become a member of it; and if we give the matter a very little thought we will find that, with a few exceptions, the men who hold aloof are back numbers in the trade. You will find that the brainiest and most progressive men in the business to-day are members of the rose, carnation, chrysanthemum or some other society devoted to their speciality."

There is a good deal of truth in what President Simpson says, but it would be unfortunate for the trade itself, we think, if all the men who hold aloof from becoming members of the special societies were "back numbers." Secretary Hammond's report states that the total annual membership of the Rose Society is 110, the life membership 50 and the associate membership 10. It will thus be seen that a very large number of the rose growers of America are still outside the pale of the American Rose Society. Very many of these men, we venture to remark, are not "back numbers" in the trade; but, unfortunately, they have evidently not seen the advantage of affiliating themselves with what can safely be called the most progressive men in the rose business, and at the same time supporting the society, from the work of which they share in common with those who are accomplishing that work. Any society devoted to the advancement of any branch of horticulture must first demonstrate to those engaged in that particular branch of the business its helpfulness to them, and conclusively its *raison d'être*, before they are likely to become interested in it. We think the American Rose Society has done all this very decidedly, and it is certainly much to be regretted that a large majority of the men engaged in rose growing in America still refrain from joining its ranks. However, we do not think that the words of the president uttered at Chicago are calculated to win new members, but rather to antagonize those who are still outside the fold. His remarks must not be taken altogether in their literal sense, as, no doubt, on reconsideration Mr. Simpson would modify his characterization, which was undoubtedly made in the heat of enthusiasm for the society, of which he has been the honored and able head for the past two years.

We are glad to note that the Rose Society has decided to join the Horticultural Society of New York in giving a show of roses in June of this year at the Bronx Park, New York City, at which certificates, bronze and silver medals for new varieties only will be given by the American Rose Society. Every effort should be made to bring out an extensive exhibition of garden roses at that time, and the nurserymen should aid the Rose Society and the local organization in effecting this. As we have pointed out on several occasions, the American Rose Society can only look most largely for increased membership from the ranks of the amateur rose growers. The association has been long enough in existence now, we believe, to test the interest of the commercial men, both in itself and in its operations. We are, therefore, pleased to observe that Mr. Simpson in his address is in favor of opening wide the door of the society and "seeking the co-operation of every man and woman in this broad land who has roses in his heart and in his garden." To this end, both as regards augmentation of membership and helping toward a complete and representative exhibition of garden roses, the nurserymen could render great assistance, and we hope to see this done. We understand that several very instructive lectures will be delivered in connection with the June exhibition, and if the weather is at all favorable and the necessary effort put forth, there is no reason why a magnificent show of garden roses should not be forthcoming.

In this week's issue we present a partial report of the proceedings of the American Rose Society, as well as of the exhibition at Chicago at which some good work was done and very informative papers submitted. The report will be continued in our next number.

PUBLICATIONS RECEIVED.

TWENTY-FIFTH ANNUAL REPORT OF BOARD OF PARK COMMISSIONERS, Minneapolis, Minn.—An interesting, well printed and handsomely illustrated publication. In the report of President Northrup special reference is made to the extensive rose gardens now building at Lyndale Park, as "marking our first ambitious effort in floriculture." The president also alludes to the meeting of the American Association of Park Superintendents which is to be held in Minneapolis in August of this year. "Probably this organization as represented by its different members, contributes more largely, in the fruits of its labors, to the health and happiness of their fellows, than any other body of men who assemble to promote the interest of their craft." Mr. Northrup also pays the following high tribute to Theodore Wirth: "Of Superintendent Wirth it is impossible to speak too highly; his energy is unbounded, and his work stamps him as one of the foremost park superintendents of this or any other country."

An American Critic on American Roses

Two new (?) roses, named after prominent American ladies, the Mrs. Potter Palmer and Mrs. Marshall Field. It is a pity our growers did not wait until they had really good American kinds to name after American ladies, for the first is simply a color sport from Mme. Abel Chateau, and precisely similar in every respect, while the other is an European variety, picked out from a number of others that reached this side without label or history. But these names have only been bestowed by market growers, and as real American rosarians, such as Mr. E. G. Hill of Richmond, Mr. John Cook of Baltimore, and others are working along legitimate lines, there are great hopes that this re-naming of old roses—so long a feature—will cease.—American Notes in Gardeners' Chronicle, London, Eng., March 14, 1908.

The foregoing article, which is unsigned, appears, as stated, in the Gardeners' Chronicle, London, England, issue of March 14, 1908. It is unfortunate, we think, that the critic did not, in this case, verify his statements before publication; and, in any event, his hyper-criticism is hardly worth notice, save to enlighten him on a few points whereof he appears to be ignorant.

His insinuation is, that both Mrs. Potter Palmer and Mrs. Marshall Field roses have been "renamed"; and are unworthy of the titles that have been bestowed upon them. He is, of course, quite entitled to his opinion as regards the latter phase of the subject; but it is another matter when he unjustly maligns two prominent American firms by accusing them of "renaming old roses."

Granted for the sake of argument (we are unfamiliar with the history) that Mrs. Potter Palmer "is simply a color sport from Mme. Abel Chateau," is it anything unusual to bestow new names on such sports? For instance, Bride and Bridesmaid are color sports of Catherine Mermet; Mrs. Oliver Ames and Mrs. Pierpont Morgan, color sports of Mme. Cusin, and no exception, so far as we know, has ever been taken to the naming of these varieties as such. There are other similar cases that could be cited, but the foregoing will suffice.

With respect to Mrs. Marshall Field, our information is that this variety is the result of a cross between Mme. Abel Chateau and Mme. Caroline Testout, effected in the United States. The critic's statement that this rose is "an European variety, picked out from a number of others that reached this side without label or history," is one, we think, that requires some corroborative proof before it will be accepted by American rosarians, and in justice to the originator of this rose it is to be hoped that such proof will be forthcoming.

W. H. Spooner.

William Heath Spooner, one of the oldest horticulturists in the vicinity of Boston, Mass., died at the Emerson hospital, Jamaica Plain, on Saturday, March 21, 1908, where he was taken to undergo an operation for intestinal trouble. He failed to come out of the other after the operation.

Mr. Spooner was born in Jamaica Plain, Mass., April 2, 1823. His early life was spent on his grandfather's farm, or perhaps more properly a market garden. At the age of seventeen he went to New York City, where he was employed in the wholesale iron and nail business; the close confinement impaired his health so much that at the end of two years he returned to Jamaica Plain, and when his health was renewed, started in the nursery business in which he had since continued. He was for many years a famous rose grower. Garden roses were his specialty and he was one of the first to import varieties extensively into this country and publish a catalogue of the same. He had been an active member of the Massachusetts Horticultural Society, since 1855, was president of the society for two years, 1889 and 1890, had been a member of the board of trustees, served on many of the committees, and only last week he presided at the lecture meeting. He was for several years delegate to the State Board of Agriculture.

Mr. Spooner was a representative in the State Legislature for 1881-5 of the ward in which he lives, was a member of the Committee on Agriculture and House Chairman of that committee in 1885. He was one of the best known men about Horticultural Hall, and was much loved by all who came in contact with him. He is survived by a widow and one daughter, Mrs. B. Bettee of Concord, Mass. Funeral services were held Tuesday afternoon at his late residence, the body being cremated at Forest Hills.

J. W. D.

E. D. Darlington.

At the moment of going to press we hear with profound regret of the death of E. D. Darlington, superintendent of the Fordhook Seed Farms of W. Atlee Burpee & Company, Philadelphia, Pa., which occurred Thursday morning, March 26, 1908, of pneumonia.

March 28, 1908

OUR READERS' VIEWS

The Brazilian Melon Fruit.

Editor Florists' Exchange:

In your issue of February 8, P. B. told us about his "melon fruit" and said he would send me a plant; I should be pleased to have one. By his description, I saw at once it was not the plant the description of which I sent you, which was cut from a catalogue for the year 1897 and which you published in the issue of January 25, 1908. P. D. Barnhart tells of his experience in the number for March 7. It is about the same as my own, although the plant never fruited with me.

Now I must try once more to set P. B. of New York right on the name of his plant. I am inclined to think it is the pawpaw; not the pawpaw of the Western and Southern States, which is a hardwooded deciduous tree (*Asimina triloba*), but the tropical pawpaw (*Carica Papaya*).

With this I am sending you clippings from catalogues that describe, as I understand it, the same plant, although worded a little differently.

Conn. NEWTON J. PECK.

The description of the plant now sent by Mr. Peck is as under:

Carica papaya. Papaw. (Spanish-Papaya.) A magnificent plant, after the style of the well-known castor-bean, having 7-lobed leaves, palmate and terminal like a palm. This plant is dioecious, and it is impossible to select the female from the male seedlings until they bloom. The fruit is from 6 to 12 inches long and 4 or more inches thick, somewhat like a muskmelon. The juice of the fruit, or the macerated leaves, if rubbed on animal flesh, makes it very tender.

The Use of Old Soil.

Editor Florists' Exchange.

In the March 14 number of *The Florists' Exchange*, under the heading of "Club and Society Doings," I note what Patrick O'Mara says about using soil more than one year in the benches. It is just as he says in regard to the soil costing so much.

I have used the soil in one of my houses six years. I have not put one ounce of new earth in with the old, and am cutting Queen Louise carnations to-day with stems 30 inches in length and blooms 3 to 3½ inches in diameter.

The first year's crop was violets; the second year, White Cloud carnation; third year, Queen Louise carnation; fourth year, Boston Market carnation; fifth year, a crop of mignonette and the spikes had stems three feet in length and as thick as one's thumb; the sixth year, that is, now, I have as stated, a crop of Queen Louise carnation and they are very fine. So I don't think the soil has to be changed every year. As to the eel worm, I would say we were never troubled with it.

I think I will let the soil remain in the bed another year, just to see if it will produce good blooms. I never have sterilized the soil.

Poughkeepsie, N. Y. A. RELYEA'S SON.

Dahlla Classification.

Editor Florists' Exchange.

In your issue of March 7, 1908, I notice an article from my friend Nathan A. Miller on the above subject, followed by an editorial note stating that the work of classifying the dahlia was now receiving the attention of the New England Dahlia Society.

In my judgment there should not only be a better classification as to forms and types, but also in the published color descriptions. In common with others I realize that it will be extremely difficult to form rules sufficiently descriptive and at the same time sufficiently elastic to cover all. Nature is not limited in the forms she produces; in fact, forms in the dahlia family are almost as varied as are the tints and colors.

Mr. Miller is quite correct when he states that there will of necessity be more or less overlapping of types. The cactus type will be the hardest to classify properly, as it is so nearly related to the decorative type. Among those justly classed as cactus there are varied forms, some with petals long and very narrow, others with petals broad and yet well pointed, and still others with irregular and curved or twisted petals.

The cactus dahlia is not a separate species as some suppose, but a garden variety, and as such contains a mixture of inherited qualities from several types in modified forms.

So I say it will be difficult to suggest to the average mind in a word all these varied forms. An accurate description as to petal formation is always helpful. Names of types should be suggestive of something well understood. It is to be regretted that the new type lately introduced as "peony-flowered" should have been so named, as the appellation is not descriptive. The blooms do not resemble a peony in the least, unless we are to take the semi-double peony as the standard. To most minds the word "peony-flowered" would suggest a large, fully double symmetrical bloom.

In my judgment no fixed rules should be adopted until published for criticism, with the view of crystallizing public opinion, or the work may be to still further confuse. Of classes or types we already have sufficient to confuse the average buyer.

As to Mr. Miller's suggestion to shorten the number of varieties listed, no argument should be necessary, as the tediously long lists have long since passed the point of being absurd. If we could get no new varieties there might be some excuse for holding on to those we have, or, at least, exercising care in discarding; but such is not the case. New varieties are coming by the score and some of them are really good—and improvements over existing kinds. We now have some 1,500 to 2,000 named varieties; no wonder that stocks and names are so often mixed!

A list of one hundred to one hundred and fifty is amply long to contain all there is of real merit and for all practical purposes, and by far too long for any one garden, as there would be duplicates in both color and form.

Denver, Col.

W. W. WILMORE.

Reflections on Current Topics.

MR. EDITOR.—My thanks are hereby extended to the Ladies' Society of Florists, who through its president and secretary, acknowledged, in a recent issue, my humble efforts in its behalf. It is always a pleasure to me to be of service to the women folk. The advice of the society's officers, that all of the lady members present at the Carnation Society's convention at Washington wear the emblem of the order, displayed, in my opinion, lots of common sense. There is nothing that will draw the attention of the public to a fine body of men, or women, so readily as emblems. And this reminds me that the carnationist delegates to the White House all seem to have been adorned with the badge of the association; how fitting was such a movement, and what a fine appearance they make in that group picture! But where was John Birnie at the time the photograph was taken? I read of the sage having been at Washington, but, evidently, he is too shy and modest either to be seen or heard on public occasions! Pity such a brilliant light should be hid under a bushel—or something else.

Reverting to badges, why has the Carnation Society done away with its little tin (I think it was) emblem? Perhaps the officers are of the same opinion as our old friend John Thorpe, that a tailor does not wear shears on his lapel to proclaim his profession, neither should the gardener affect a gardenia for a similar purpose! Well, the tailor is generally a dapper elf, whose own tozzery "makes the man," and advertises his business; but some distinguishing feature is surely necessary to signalize the ornamental horticulturist. Why not, then, wear flowers on each and every occasion when the craftsmen gather in convention?

Since the foregoing was written I observe that Birnie's light has been shining at the meeting of the New York Florists' Club, where he dilated on soils for carnations, adding that some of the compost used by him contained the non-decomposed hairs of dead dogs. When it comes to the "hairs of dogs" Birnie may, I reckon, be taken as an authority. They seem to be as good for carnations as they are for carnation growers in the "cold gray dawn of the morning after." Clavey soil, containing nigger bones, is, according to Birnie, suitable for the growth of the divine flower. I wonder how the plant would act in an abandoned Scotch cemetery! I guess there would be too much disturbance of the roots there, brought about by an excess of lime created by a superabundance of oatmeal consumed during the lifetime of the departed Scots—the ruling passion for stirring up things, being "bred in the bone," persisting even below ground, as it were.

It must be amusing to others, as it is to me, to read the statements of the various trade papers, each one of which claims to be the "best ever." These claims have been made so often that the claimants no doubt have actually come to believe them themselves. Funnier still are the testimonials supplied by "admirers" of the different journals, and it occasionally happens that the same admirer sends the same laudatory epistle to every one of the trade papers published. This, of course, dis-

counts considerably the value of such "hoost," which, after all, don't amount to much, being only the views of the individuals "hoosting." I have often thought that adverse criticism is more beneficial, though perhaps less encouraging, than wholesale fulsome laudation, and I recently came across a paragraph that seems to substantiate my view on the matter. It was as follows:

"Sugar is fattening, but it is not a tonic. Mere or sheer praise is agreeable, but it is not enlightening. Critics are often better advisers than friends, especially than interested friends. The inspired writer who told unspiced rulers to beware when all men speak well of them, could have said newspapers quite as well as men, had there been newspapers in his day. Indeed, the Scripture distinguishes friends from flatterers, when it declares 'faithful are the wounds of a friend,' such a friend as Nathan was to David, for instance, or as Paul was to Peter, when he withstood him to his face, on the considerable question of whether the Gentiles should have the gospel preached also and equally unto them as well as the Israelites."

I have been "wounded" so often that I know, from experience, the beneficial effects of the stabs.

In common with all horticulturists, ornamental and others, I am always interested in what that talented craftsman, Robert Craig of Philadelphia, has to say. His essay on "The Private Gardener," recently read before the Massachusetts Horticultural Society was a "gem of purest ray serene." I am pleased to observe that Mr. Craig, like myself, is a lover of the classics; this is shown by the many quotations therefrom interspersed throughout his admirable paper. I think, however, he misquotes Emerson, when he attributes to that sage the remark: "If you make shoes better than anyone else you will find a path beaten to your cottage door." If I mistake not, Emerson cited the more humble but none the less useful article, the mousetrap, and not shoes. Of course, Emerson assumed that the maker had advertised his article in a paper having the "largest circulation." However that may be, the application of the saying is apt, only I like correct quotation above everything else; it detracts from one's demonstrated erudition to misquote.

Another matter in which Mr. Craig errs is the parentage of the carnation Mrs. Thomas W. Lawson. This variety was obtained from crossing Daybreak and Van Leeuwen, not Tidal Wave, as he mentions, although the latter was probably one of the parents of Van Leeuwen.

Mr. Craig very wisely recommends good reading to the gardener; but from the suggested list of books he gives he seems to be of Goldsmith's opinion, who said: "I love old times, old friends, old books, old songs, old wine, everything that is old." Most of the books named by Mr. Craig are ancient, and can hardly be considered up-to-date. For instance, Hunt's "How to Grow Cut Flowers," Downing's "Fruits and Fruit Trees," though good in their day, have surely been superseded by "Scott's Manual" for the cut flower grower, and the several works on fruits and fruit trees that have appeared subsequent to Downing. Modern literature, for practical purposes, is mostly to be preferred to ancient writings.

Mr. Craig and myself are at one in being fond of Fra Elbertus. That philosopher furnishes much "food for thought" always, and I am glad Mr. Craig gave quite a quantity of the nourishment for the gardener to digest.

There are a few points which I looked for in vain in Mr. Craig's paper. One of these is the relationship of the private gardener to national and other horticultural societies, particularly to the S. A. F. Pity, it seems to me, he did not take up this theme. Then again, the subject of "gardeners' graft" would have been an interesting one, no doubt.

As regards Mr. Craig's quoted warning: "Folks who never do more than they are paid for, never get paid for more than they do," and the supplemental advice of the other Mr. Craig (W. N.): "His (the gardener's) course should be to think more about the character of his work than the amount of his pay" are all right in theory, but like other fine words that "butter no parsnips" won't work out in practice. I like better the Biblical saw: "The laborer is worthy of his hire." It is more practical and better suits modern and especially American ideas. Mr. Craig omitted to mention one way whereby the gardener could add to his meager income, viz., to become a constant contributor, for pay, to the trade papers. This side line might enable him to think less about what his actual employer pays him, and "more about the character of his work," but the "real reward" that both master and man are looking for in this hard, work-a-day world is dollars and cents, their equivalent in service on the one hand, and the genuine article on the other; and each is trying to get as much out of the other, both as to service and remuneration thereof, as he possibly can. "The more you do, the more you are able to do," is an excellent aphorism, but what's the use of doing, if somebody else only is reaping the benefit from your endeavor? That is something that puzzles

Jon.

The present issue of *The Florists' Exchange* affords, we think, abundant evidence of the confidence in such conditions entertained by our advertisers. We desire the attention of our readers to the various offerings presented, and desire to express our appreciation of this further very tangible proof of the faith of our vendors in the business bringing qualities of our journal.

AMERICAN ROSE SOCIETY

ANNUAL MEETING AND EXHIBITION
AT CHICAGO, ILLINOIS

March 25, 26 and 27, 1908

BUFFALO, N. Y., CHOSEN AS NEXT MEETING PLACE.

Officers elected: President, August F. Poehlmann, Morton Grove, Ill.; Vice-President, William F. Kasting, Buffalo, N. Y.; Secretary, Benjamin Hammond, and Treasurer, Harry O. May, both re-elected.

Beautiful Spring weather ushered in the opening day of the exhibition and convention of the American Rose Society on Wednesday, March 25, 1908, and the broad steps of the Art Institute in Chicago, where the show and meetings were held, early showed a sprinkling of visitors and others all interested in the exhibition. Blackstone Hall in the Art Institute was utilized for the exhibits, and proved to be more than ordinarily well adapted to the purpose. Usually the hall is used for the display of statuary and noted pieces of sculpture and architecture, but the Institute management had early cleared the hall of everything portable, and a wide area was speedily available for the displays of roses. Staging was rapidly proceeded with and by 2 o'clock the immense hall had the semblance of the grand show to be opened at five o'clock.

Those present at the exhibition in Washington last year decided that the show this year in point of number of exhibits eclipsed the Washington exhibition fully 100 per cent. While there were the usual vacancies in various classes, certain of the well-filled classes showed a spirit of competition which was certainly East against West, and the division of honors was at times a difficult task for the judges.

Several novelties were shown, which attracted considerable attention. Rhea Reid, Wyndmoor, Mrs. Jardine, and Kate Moulton were all seen to advantage, and figured in the prize list. The judges had a hard task before them and it was late in the evening before the blue and red tags were affixed to the entry cards.

The exhibition opened at 5 o'clock without ceremony, and long before the judges had completed their work. A first-class orchestra furnished music and until the close of the evening there seemed to be no lack of visitors.

Wednesday Evening Session.

President Robert Simpson called the meeting to order at 8:30 p. m. Without the usual addresses of a local character, the meeting proceeded at once to business.

The president read his address as follows:

President's Address.

Another year has rolled around and we again meet in our annual convention to look and talk over the work of the year that is past, and to plan the policy and work of the society in the future.

The Washington Meeting.

Last year we met in the capital of our country and many of us felt honored by having the privilege of taking the hand of the President of the United States in ours and receiving his kindly greeting and good wishes for ourselves, and noting his appreciation of the work being done by the Rose Society and many of the individual members. It was said by many of our members that the Washington meeting was in many respects more enthusiastic, and gave promise of larger permanent results than any of its predecessors.

This year, through the generous invitation of the Chicago Florists' Club, the American Rose Society plants its banner in the city of Chicago, the great and magic city of the West, where more roses are produced under glass, and distributed from this point over a larger area, than perhaps can be said of any other center in the country, not even excepting the city of New York. It seems, therefore, eminently fitting that this society should honor this city and this rose growing center by holding its exhibition and convention here this year.

Many of you have seen the splendid exhibitions given in the city of Chicago in the past and have felt certain that the rose exhibition this year would be a distinct advance over anything hitherto attempted or seen in this city of big things.

Appreciation of Chicago Endeavors.

I wish most heartily to express my appreciation of the work done by the Chicago Florists' Club and the rose show committee appointed by the club to secure special premiums and arrange the many details incident to an undertaking of this kind. When we remember that the local florists have on their hands and minds the National Flower Show to be given here next November, and that they will have to give much of their time and means to put it through in a manner befitting the occasion, and the scope of the undertaking, we are constrained to take off our hats to the men who have secured such an array of special premiums as our list shows, and have made possible such a splendid exhibition as we have seen to-day.

The meeting of our society here in this Western center, for the first time in its history, is a good augury for the future of the society. I am very sure; we shall miss a good many faces here that have become familiar through meeting them so frequently at the annual gatherings in the East, but we are to make new friends that will join with the old in making this society a tower of strength, and make it truly national in scope and character as well as in name.

The Society's Aims.

In seeking to make recruits to our organization one frequently hears the remark, "What is the use of having so many societies anyway, and what benefit would it be to me if I should join the American Rose Society?" The only answer that I can give is, that practically every grower of repute who has had his attention called to the aims and purposes of this organization has become a member of it, and if we give the matter a very little thought we will find that, with a very few exceptions, the men who hold aloof are lack numbers in the trade. You will find that the brainiest and most progressive men in the business to-day are members of the rose, the carnation, the chrysanthemum, or some other society devoted to their specialty. An orchid society is now being projected as a necessary adjunct to the orchid business. Read the printed matter on the back of the Rose Society's letter paper and you will find its aim is "To increase the general interest in the cultivation and to improve the standard of excellence of the rose for all the people." "To foster, stimulate and increase the production in every possible way of improved varieties of the rose suitable to our American climate and requirements." A very noble aim this, surely, and one that should naturally inure to the benefit of every man engaged in the growing or selling of roses for a living. The annual exhibitions, affording as they do to raisers of new roses the very best opportunity of getting their novelties before a critical tribunal, and the opportunity offered the searchers for novelties to see these and judge of their merit, is a very important feature of the work of such societies, and the man who follows up these exhibitions and has the judgment to discern the good and bad points of both new and old varieties, and will gauge his planting accordingly, discarding the varieties that have become old and common and giving space to newer sorts of undoubted merit, is the man who will have money to build more greenhouses and buy automobiles.

Very few of the visitors to the Washington or Boston exhibition returned home without receiving inspiration to strive for a higher grade of flowers as the product of his skill, with the feeling of satisfaction with his calling, and with a determination to add dignity to it, and to make his business stand for something in the community.

The Rose Society certainly claims a share in the good work of making conditions more favorable for the rose grower of to-day. What has been done up to the present, however, is as nothing compared to the work that lies before it, when, with increased membership and available funds it is in a position to disseminate knowledge that will enable lovers of the rose, and that includes practically every citizen of this country, to plant varieties, and cultivate them in such a way as to give joy and satisfaction to the planter. There will then be sold by the nurseryman and florist for outdoor planting more roses than we can at present conceive of, and the prophecy will be fulfilled, "The desert place shall rejoice and blossom as the rose."

Secretary's Able Work.

More has been done during the term of our present secretary to put the society upon a sound and permanent basis, and to present its claims and benefits to the florists of the entire country, and to many who do not grow roses for a living than most of you are aware of; the volume of correspondence and the amount of clerical work done would stagger most of us, if it should be put upon us, and he certainly deserves the thanks of every member of this body for his painstaking work, done entirely for love of the good cause, and refusing any pecuniary compensation therefor.

During the past year the expenses have been out of proportion to the income, the officers having advanced money to meet obligations and carry on the work, trusting to the receipts of this meeting to balance accounts; failing in this I suggest that a few friends of the so-

ciety meet here in Chicago, and together lift the treasury out of its awkward predicament.

Certificates for new varieties authorized at our last meeting, and life membership certificates have been provided at considerable expense, but we think to the credit of the society.

The Rose Journal.

A resolution was favorably received at the Washington meeting requesting the executive committee to consider the proposition of establishing a Rose Journal. This matter has received considerable thought and discussion during the year at the hands of the committee, and the secretary was authorized to go ahead and issue a prospectus, which has been sent out broadcast and has been commented on very favorably. The secretary will present to you a fuller report on this proposition; I would ask for your careful and thoughtful consideration. If the members will support it in sufficient numbers it can be put through, otherwise it must be dropped.

An Exhibition of Outdoor Roses.

A committee was appointed to confer with the American Association of Nurserymen relative to the holding of an exhibition of outdoor roses in June, under the joint auspices of the two organizations. Mr. Hill, as chairman, will report on the work of this committee. Through the good offices of our ex-president, Mr. Newbold, an invitation has been extended to the American Rose Society by the Horticultural Society of New York City to hold a June show this year in Bronx Park, New York City, the latter society to furnish the money and take care of all the details, and our society to offer certificates, medals, etc., and assist in arranging the schedule. The offer was accepted and the exhibition is assured, but the executive committee of the Rose Society authorized the offering of certificates, bronze and silver medals for new varieties only.

It is the wish and desire of the members of the committee that the nurserymen, and all others who grow outdoor roses extensively will keep this exhibition in mind and arrange to make extensive displays of roses in Bronx Park next June.

The educational features of such an exhibition that is free to all should be very great, and as an advertising medium it is not to be despised.

The Present Program.

In arranging the program for this meeting the commercial rose grower has perhaps been brought to the front more than the amateur, which probably is as it should be at the present stage, but it will not do at all I think to allow this society, now or in the future, to drift into a trade organization and have its work restricted to the holding of exhibitions and exploiting of new varieties; that would be praiseworthy work, but it can do that and a great deal more by opening wide its doors, and seeking the co-operation of every man and woman in this broad land who has roses in his heart or in his garden. We should have in our ranks every authority on roses in the country, and the secretary should have a list of these authorities to whom he could refer questions that are too difficult for him to handle.

Finally, gentlemen, let us take a wide outlook; let us be broad in our views, and in our discussions at this meeting let us be considerate of each other's feelings, remembering that we have but one object in view, the placing of the rose on the pedestal where she rightfully belongs, and the ennobling of our calling and profession.

Secretary Hammond then read his report as follows:

Secretary's Report.

The secretary first and foremost desires to acknowledge publicly the value of the service rendered by the four trade papers, American Florist, Florists' Exchange, Florists' Review and Horticulture—named in order of their age, for the courteous consideration which one and all have given to matters pertaining to the American Rose Society. It has been the effort of your secretary to get as much publicity as we could, because this society was founded with the idea of its becoming an extensive popular association to spread the love of the beautiful rose among the people.

Another important fact is that the work of co-operation and patronage incumbent upon a national society cannot be done unless the society is provided with the revenue, and the revenue depends upon membership. The American Rose Society should be able to patronize local societies by the offering of its medals freely; but all this takes revenue. The life membership fund gradually increases, this affords a revenue of 4 per cent on the investment per annum, and the fund is now close to \$3,000. Our life membership stands at 59; the annual membership paid for the year 1907 was 119, the associate membership was 19.

The money awarded by the society at its last show reached the sum of \$509 for stated premiums, besides the specials.

The bulletin of the annual meeting, which was begun under Secretary W. J. Stewart's term of office,

has been continued and 600 were issued last year. These books seem to be highly appreciated, secretaries of kindred societies a king for them, in various instances. To get out these books nearly entail considerable expense, and part of this cost was met by soliciting a half or a full page advertisement, to 60 letters sent out, favorable replies came back from twelve persons.

At the Washington meeting last March the advisability of issuing a certificate of merit for new roses which did not reach the score required for such novelties to win a society medal, was discussed and recommended. The executive committee, acting upon that recommendation, prepared such certificates and issued seven. E. G. Hill Company, Richmond, Ind., for Rhea Red, F. H. Krueger, Washington, D. C., for Queen Beatrice, Myers & Sautman, Wyndmoor, Pa., for Wyndmoor; M. H. Walsh, Woods Hole, Mass., for Paradise, La. F. Pinna, Delight and Juanita. This recognition seemed to please everyone.

Up to last year there had not been any certificate of life membership nor any society seal. A handsome certificate was made, a special seal prepared and adopted, and 54 of these life certificates have been issued to persons who have paid \$50, which is the amount that is creating the permanent fund of the society. The certificate was sent to the families of deceased members.

The American Rose Society has been invited to hold a June show in the Botanical Garden in Bronx Park in New York City in connection with the New York Horticultural Society. Ex-President Frederick R. Newbold attended one of the executive committee meetings, formally extended the invitation, and the same was duly accepted.

The executive committee held five meetings in New York City; these meetings were always attended by some from a distance and such members as were not personally present invariably reported by letter.

Early in the year Vice-President Philip Breitmeyer of Detroit set the pace for a fine special premium list, seconded by Arthur T. Boddington of New York, which, under the fostering care of Messrs. Pochmann, Asmus and others of Chicago, swelled to very satisfactory dimensions.

At the last annual meeting a "Rose Journal" was a topic which grew out of the question propounded by President Simpson: "How to increase the interest and thus the membership." The secretary assumed the responsibility of issuing a prospectus and of mailing the same to all the present membership. The details of the results will be taken up more fully separately.

The record of the year shows that after nine years the American Rose Society lives; it has crossed the Alleghenies, Born in Atlantic City on the ocean shore, holding its earliest exhibition in the Metropolis of America, going to the Garden City of Pennsylvania, then to the scholarly city of Boston, from there to the capital of the Nation, welcomed by President Roosevelt, then accepting the cordial invitation from Chicago. Here we are in this Imperial City of the West, with such a show before our eyes as maketh the heart glad, and our motto is "A Rose for every Home; a Bush for every Garden"; and this if carried out means beauty and grace in the homes of all the people.

BENJAMIN HAMMOND, Secretary.

In the absence of Treasurer Harry O. May, his report was read by E. G. Hill, of which the subjoined is an abstract.

Treasurer's Report.

For year ending March 20, 1908:
Total cash received on general account \$1,330.02
Total disbursements 1,077.97

To balance on hand, \$252.05

In addition to above general account seven new life members have joined the society, making a total of 55 life members to date.

HARRY O. MAY,

Treasurer.

Certain loans appearing in the report were questioned as seeming inadvisable when the society had a balance of \$300 or more. Secretary Hammond explained that when a settlement was sought after the Washington meeting there was not enough money to pay the prize list, hence the loans. Considerable discussion followed, bearing on the question of premiums, and on motion of W. A. Manda the matter was left to the executive committee to report at the next meeting as to the advisability of substituting certificates and medals for money prizes.

J. A. Valentine, Denver, Colo., then read a paper on "Roses in Colorado."

This was followed by W. A. Manda, of South Orange, N. J., with an address on "Rose Gardens," which was discussed.

The next item adjournment, resuming at 10 a. m. Thursday.

The Awards.

Teas and Hybrid Teas—25 Blooms.

Mrs. Abel Chubb, First, Roby Simpson, Clinton, N. J.; Second, A. Farnwald, Hillside, Pa.; Richmond, Second, W. H. Elliott, Brighton, Mass.; Any other named disseminated, First, W. H. Elliott, with Satrape.

Twelve Cut Blooms.

Bride, First, W. G. Bockel, Clifton, N. J.; Ivory, First, J. F. Ammann, Edwardsville, Ill.; Killarney, Second, J. F. Ammann; Richmond, First, J. F. Ammann; Uncle John, Second, J. F. Ammann.

Special Prizes.

Fifty American Beauty (the American Rose Society's prize), Myers & Sautman, Chestnut Hill, Pa.

Display of cut roses, all varieties (the Dorrance Challenge prize, \$250), Pochmann Brothers Company, Morton Grove, Ill., with nine varieties.

One hundred Richmond, E. G. Hill Company prize of \$50 in gold, Pochmann Brothers Company.

Fifty blooms of any variety of American origin now in commerce, Montgomery silver cup, \$25, A. Farnwald, Hillside, Pa.

Largest and most varied collection of cut roses, Manda cup of \$25 in gold, E. G. Hill Company, Richmond, Ind.

One hundred Killarney, President Simpson's prize of \$50, W. H. Elliott, Brighton, Mass.

Fifty Killarney, Dungee & Conard Company prize of \$25, W. H. Elliott.

Fifty Bride, Bentner prize of \$25, Bassett & Washburn, Chicago.

Fifty Liberty, Davis Company prize of \$25, A. Farnwald, Hillside, Pa.

Fifty Ivory, Wilcox prize of \$25, Peter Reinberg, Chicago.

One hundred blooms, best pink roses in the show, any variety, Pochmann Brothers Company prize of \$50—Won by that firm with Killarney.

Fifty blooms red roses (Richmond and American Beauty excluded), Pochmann prize of \$25, E. G. Hill Company, with Rhea Red.

One hundred Uncle John, Wistor Brothers' prize of \$25, Peter Reinberg.

Fifty American Beauty, Mogg Coal Company prize of \$50—Myers & Sautman, Chestnut Hill, Pa.

Twenty-five Bridesmaid exhibited by growers with less than 50,000 square feet of glass, Bassett & Washburn prize of \$25, Albert Lies, Niles Center, Ill.

Twenty-five Bride, under same conditions as the foregoing, Bassett & Washburn prize of \$25, Albert Lies, Niles Center, Ill.

One hundred Mrs. Potter Palmer, S. Freeman & Sons prize of 50—Pochmann Brothers Company.

Best new rose not in commerce and never exhibited before the American Rose Society, Pierson silver cup valued at \$25, W. P. Craig, exhibiting for Robert Scott & Son, Sharon Hill, Pa., with Mrs. Jardine.

Twenty-five blooms pink roses, not disseminated prior to 1908, J. E. Deannud silver cup, valued at \$15—Myers & Sautman, with Wyndmoor.

Twenty-five Killarney, Kroeschell Brothers' prize of \$10, Pochmann Brothers Company.

Fifty American Beauty, Darling & Company prize—Pochmann Brothers Company.

Twenty-five Killarney, Holton & Hankel Company prize of \$10—Pochmann Brothers Company.

Best vase of 100 American Beauty, Crane & Company silver cup, valued at \$100, Bassett & Washburn, Chicago.

Best fifty blooms of a new forcing rose, never before exhibited for competition, Holler Brothers silver loving cup, valued at \$20—Myers & Sautman, with Wyndmoor.

Vaughan's Seed Store, Chicago, took the silver cup for general display of roses in pots, best for six plants in not larger than 8 in. pots, best for six climbers, second for specimen climber.

Two hundred Lily of the valley, First, Pochmann Brothers Company, second, H. N. Bires.

The judges were J. H. Dunlop, Toronto, Ont.; Peter Crowe, Erie, N. Y.; and Emil Eubrecht, Chicago. Special judges, W. H. Elliott, Alex. Montgomery, Jr., and Frank R. Pierson.

The session on Thursday morning opened with the reading of a paper by J. F. Sullivan, Detroit, Mich., on "The Rose in Decorations."

A paper was read by W. H. Elliott, on "Proper Size of a Committee of Rose Judges."

A paper by Mr. Maxmuller on soils followed. In the discussion it was suggested that the water used might have an effect on the propagation of the effect obtained from such.

Rolls were taken at the close of meeting.

The election of officers for the next year was held on August 1, Pochmann of the previous year was unanimously elected to the office. W. P. K. Stiles was elected vice-president, Secretary Hammond and Treasurer Harry O. May were re-elected. Mr. Farnwald was re-elected W. P. K. Stiles to the board of directors for three years more.

Final papers and other concluding business of the convention, Pochmann Brothers, including an address by Farnwald, and W. A. Manda of A. D. K. Co., St. Newburyport, Mass.

Pot Roses for Easter.

BY ROBERT CRAIG, PHILADELPHIA, PA.

It was thought by the officers of the Rose Society that some notes on this subject would prove useful to beginners in the business, and in accordance with that idea I give the results of my observation and experience.

The principal obstacle in the way of having fine specimen roses at Easter lies in the difficulty of obtaining sufficiently strong plants. In roses of the Crimson Rambler and Wichuraiana types, strong canes can be had by planting out in the open ground in heavy soil, well manured and leaving the plants out at least one Winter; when they are left out for two Winters they make extra strong plants, with long, strong canes suitable for training into large specimens.

Magna Charta, which is undoubtedly the best of all the hybrid roses as an Easter pot plant, may be treated in like manner; this also applies to Clothilde Soupert, which is deserving of special mention on account of its freedom of bloom, distinct color and, above all, its good keeping qualities; it may be kept, in a cool house, for two weeks in full bloom, which cannot be said of many of the varieties.

Suitable Varieties.

Among other good Easter hybrids for pots (I know of but few) may be mentioned Mrs. John Laing, Ulrich Brunner (of fine color but a poor keeper), Rhodocanachi; Mlle. Gabriel Luizet, General Jacqueminot and Killarney. If sufficiently strong canes of the latter can be had it is one of the most attractive; but these varieties do not make strong plants on their own roots in the open ground, especially in the Northern States.

For such varieties as cannot be obtained from nurserymen in this country, recourse must be had to importing the strongest plants possible from Europe in the Fall, preferably from England or Ireland, budded *low* on Manetti. Those from Holland are generally budded too high on the stock to make attractive pot plants. Plants which are packed for shipment should have their roots surrounded by damp moss, and should be exposed to the air as little as possible from time of lifting until they are potted; many failures result from lack of this precaution. The plants should not be lifted until they have had some frost to ripen the wood thoroughly; in the latitude of Philadelphia this is usually from the middle to the latter part of November. I have never been able, however, to get plants uniformly strong enough to force them the first season after importing; the plants are not graded into sizes and many sent are too small to make suitable plants the first season after importing. It is our custom to take only the stronger plants and the others are wintered over, as cheaply as possible in cold frames or houses, to be grown in pots the following Summer, which treatment greatly benefits them.

The Crimson Rambler, if carefully handled will make as fine plants the first season from open ground, but the other varieties will bloom more freely if grown in pots one season. The cost of wintering imported plants in frames is about \$50 per thousand, and the cost of growing them through the Summer about \$50 per thousand additional; but the improvement in the character of the plants fully justifies the expense, for Easter purposes. Air should be given during the Winter whenever the weather is mild enough, and every precaution taken to prevent the tops from growing as long as possible; after the young roots have started they should not be allowed to freeze, as they are thus easily killed; the pots should stand on a dry bottom and be packed in leaves, sawdust, ashes or other suitable material.

The Crimson Rambler has been for many years a very popular Easter plant, but its popularity is waning; it will still be grown, but in smaller numbers than formerly, but fortunately there are a number of climbers that may be grown profitably, which have the charm of novelty. Among the very best are Lady Gay, Dorothy Perkins, Tausendschön and Hiawatha. The last named is especially charming; although the bloom looks frail, it is a fine keeper, and I look for it to increase in popularity. The new variety, Newport Fairy, will undoubtedly be largely grown when its merits become known. Another very fine one is Mr. Walsh's Juanita, and no doubt there are other hybrids in the Wichuraiana section which I have not had the opportunity of seeing.

Culture.

The culture of pot roses for Easter is very simple, but there are certain rules as to temperature, airing, and the prevention or destruction of insects, which must be faithfully followed: The soil should be a clay loam enriched with well decom-

posed stable manure, and I like to add a liberal sprinkling of bone dust and fine sheep manure; the latter gives the foliage a rich dark color. The plants should be carefully and *very firmly* potted, using a potting stick to pack the soil about the roots. It is well to shade the house either with slats or by whitewashing the glass with whiting and coal oil; and sprinkle frequently with water to keep the wood plump until the young roots start; they should never be allowed to shrivel. Keep for five or six weeks in a night temperature of 40 to 45 degrees; the plants should by this time be well rooted and the temperature may be gradually increased, if necessary, to 60 or 65 degrees at night. When we have a late Easter, as this year, it may be at no time necessary to exceed 60 degrees; the lower the temperature at which they can be flowered in time, the better.

Crimson Rambler and Wichuraiana roses may be trained in various shapes—globular, oval, or in the form of fans, etc.—or they may be cut back to about one foot from the pots and grown without any staking. In these severely cut back plants the clusters of flowers will be larger than where more of the wood is retained and the lighter branches allowed to bloom. Use tobacco stems between the pots to keep down insects, cleaning out and removing about

Philip Breitmeyer
Vice-President A. R. S. for 1908

once a month. Give always *plenty of air* if weather permits; if this is regularly attended to, mildew is not likely to appear, and when the buds are set an occasional watering, say once in two weeks, with manure water is beneficial. Soot water is also excellent to improve the foliage and the color of the blooms and serves also to destroy worms.

To recapitulate, I should say the principal points to be observed are: Lift carefully, pot promptly and firmly, start at low temperature, give always as much air as possible, and use tobacco stems between the pots, which should have some space between them from the very start.

Rose White Killarney.

This variety originated at the Waban Rose Conservatories, Natick, Mass., and is a sport of the popular Killarney rose. Half of the stock has been purchased by the F. R. Pierson Company, Tarrytown, N. Y., and will be placed on the market next year. Mr. Pierson has this to say of the newcomer:

"I believe White Killarney is going to be the greatest white rose that has ever been introduced, because it is an all season rose, like Killarney, being good both Summer and Winter, and should largely displace both Bride and Kaiserin Augusta Victoria in consequence, neither of which covers the entire season. Killarney has become such a popular rose that I believe White Killarney will prove to be an equally important addition to our limited list of Winter-flowering roses. Both ourselves and the Waban Rose Conservatories will grow a whole house of White Killarney the coming year."

Roses in Colorado.

BY J. A. VALENTINE OF DENVER, COLO.

Topographical.

The State of Colorado, situated a little to the west of the geographical center of the United States, is about 375 miles long from east to west, about 275 miles wide, and has a total population of about 650,000. Denver, the principal city and capital of Colorado, with a population of about 200,000, is situated a little to the east and north of the center of the State. In traveling from Chicago to Denver, your journey would be a little longer than from Chicago to New York.

In going west from here by rail, you reach the Missouri River at Omaha in about five hundred miles. From there for more than five hundred miles you cross an immense plain, with an average rise of about seven feet to the mile, so that by the time you reach Denver you will be a mile above sea level.

You will have traversed the State of Nebraska from east to west, and a large part of this State is now fertile and productive farms, although within the memory of some of those here to-day it was a portion of the Great American Desert, and considered sterile and unproductive. My own personal knowledge of this region only extends back about twenty-five years, but I can very well remember when the meridian of 100 degrees was spoken of as a dead line, beyond which it was absolutely impossible to conduct any farming enterprise without irrigation. To-day the situation is so far changed that a great many people are contending that profitable farming without irrigation is possible even as far west as Denver, and more than that they are showing a good many substantial results to justify the faith within them.

The eastern half of Colorado is part of the immense plain already mentioned, and the western half is mountainous. The main range of the Rockies lies directly west of Denver, with the crest of the range only about fifty miles away, with numerous peaks reaching an elevation of 14,000 feet, and the gaps or passes ranging from ten to twelve thousand feet. Westward from here the whole State is mountainous, with many fertile valleys between the ranges, some of them narrow and some of them wide; but from the eastern to the western boundary of the State the whole region is arid, with a very light rainfall, which averages about 14 inches per annum in the vicinity of Denver; and farming by ordinary methods is not possible without irrigation. Evaporation is at all times very rapid, and dews almost unknown.

Recently a great many experiments have been conducted under what is known as the "Campbell System," which briefly means intensive cultivation and a retention of the moisture in the soil by continually keeping the surface in a pulverized condition, and thereby preventing evaporation. It is too early to speak with entire confidence as to results, though success has been achieved in many cases, and the striking results obtained may well carry a lesson for florists whose carnations are suffering from drought in the field.

Climatic and Soil Conditions.

The whole State is blessed with abundant sunshine both in Summer and in Winter, and except in the mountainous portions, the Winter climate is mild with but little snow. There is a wide daily range of temperature, nights being cool in Summer and cold in Winter. There is also a great difference between the temperature in the sun and in the shade, largely due to the absence of moisture in the atmosphere. Naturally, in a climate so widely different from the climate of the Eastern States, problems arise peculiar to this locality.

In any arid region the vegetation is scanty, and this same condition has existed back during the countless years in which the surface soil was being formed. Consequently the soil contains very little fiber and very little decayed vegetable matter, but the soluble salts are apt to be present in large quantities, because there has been little water to dissolve them and wash them away. Some of these salts are beneficial and some of them are harmful. In many localities alkaline salts are present in such quantities as to make the soil utterly useless, and the water of the streams naturally partakes of the chemical qualities of the soil so that in a great many cases the water is so badly impregnated as to be utterly unfit for use. Many florists in the arid regions have failed because they neglected to investigate the quality of their water supply before deciding upon a location.

It is generally possible to find soil which will produce good roses in the field, but it is difficult to find it heavy enough to be satisfactory and at the same time porous enough to permit of heavy watering in the benches. Our heaviest soil, called adobe, formed from decomposed shale, is certain to contain alkali, and cracks very badly when dry; but by a careful selection of soil most growers are meeting with fairly satisfactory results, although there is still much to be desired and the ideal soil has not yet been obtained.

It is not an expensive or a difficult matter to secure a determination of the soluble salts in a sample of water, and the Department of Agriculture will furnish valuable advice in such cases if requested. When it

comes to an analysis of the soil, the situation is very different, for then the problem becomes very complex, and what with soluble and insoluble food, moisture content, mechanical condition, and nitrifying and denitrifying bacteria in numerous varieties, the layman searching for information becomes confused and is quite ready to agree with a recently published statement of Professor Corbett to the effect that the plant itself must tell you by its action whether the soil is suitable. Yet even the soil sharps quarrel among themselves, and many of them claim that soil analysis is a safe guide. Your Illinois Experiment Station seems to be among the latter, and more than that, they support their claims by results which lead us to hope that the present confusion will some day crystallize into tested and accepted methods whereby the man in the laboratory may give wise counsel to both the man with the hoe and the one with the hose.

Owing to the exceedingly dry atmosphere and the light rainfall, it is very difficult to get good results from the composting of soil in Colorado. If sod is piled up it does not rot but dries out. If manure is mixed with the soil its chemical condition remains unaltered for a long time. Some of our rose growers have on that account absolutely abandoned the use of manure in soil put into the benches, and all growers use it with great caution. When used as a top-dressing it should be mixed with about an equal quantity of soil. It is safe to say that if a rose grower in Denver were to top-dress his benches with such quantities of green manure as are used in the vicinity of Chicago, he would hardly have a leaf left on any of his plants at the end of a week. We Denver growers are simply amazed at the impunity with which manure is used in this vicinity.

Evils Confronting Rose Growers.

Among the ordinary evils which rose growers have to contend with there are none of them which we do not have. The dry air seems to suit the red spider to perfection, but with our continual sunshine we are able to syringe the roses freely without any bad effect. Black spot attacks the American Beauty and hybrid teas to some extent, but is not nearly the scourge that it is in the East. Thrips are like the poor, always with us, though I cannot vouch for as many varieties as your Illinois Experiment Station claims; and the green fly propagates as freely with us as elsewhere, but is eradicated long before we get rid of the thrips.

Mildew has been quite a problem with us in August and September. In the Summer time our houses not infrequently show a temperature of 110 degrees when they are not shaded, although it is very rare indeed that the weather bureau reports any temperature above 95 degrees, and some of our September days are nearly as hot as Midsummer. We frequently get a night temperature in June, July and August of 45 degrees, with 6 or 7 degrees lower than that on rare occasions, and we expect a severe frost about the middle of September. At the place where I have charge, we keep steam in the boilers all through the Summer, believing that it pays to do this as a protection against mildew; and yet last Summer we had a great deal of mildew, while one of our neighbors did not fire at all and his stock was perfectly clean. Owing to the dry air one would naturally expect us to be free from this trouble, and I am not competent to say why we are not.

A number of years ago our tea roses were not producing well, and were not making a good growth. Investigation disclosed the presence of immense numbers of eel worms. Our dry climate and our mild Winters seem to be just suited to the production of nematodes in the open ground. After a very thorough comparative test, we abandoned the growing of tea roses on their own roots, and have now for a number of years grown them only on manetti. For a considerable time we sterilized the soil that we put in the benches, but this process has been abandoned, as the manetti stocks have seemed to be perfectly immune. I believe that a large proportion of the tea roses grown in Colorado are now grown on manetti stocks.

The growing of American Beauty on manetti has been quite extensively tried, but the results have not seemed to be decisive either for or against this method, and the gain, if any, was so slight that all our Beauty roses are now grown on their own roots.

Native Roses as Stocks.

So far as I know, none of our native roses have ever been used as stocks upon which to graft or bud roses for forcing or for garden use, and I presume the probabilities are against securing any good results, but the experiment ought to be worth trying. We have one or two native roses that are quite vigorous in their growth, and they are doubtless resistant to the evil effects of the alkaline salts so generally prevalent in the soil. Probably nothing but an actual test could determine how well they would respond to Winter forcing, though the chances are that they would prove rebellious.

Dormant roses of all kinds are hard for us to handle. They are slow in making roots, and it requires careful handling to keep the wood from shriveling. Such roses as the Crimson Rambler are always in evidence in the stores at Easter time, but plants that are really well done are always scarce, and no grower can be absolutely certain of his results.

Garden Roses.

Our people as a rule are but just beginning to have a proper appreciation of garden roses and shrubbery, and within the last few years business in these lines has largely increased.

Owing to the peculiar climatic conditions already outlined, the growing of roses in the garden presents a great many problems, and it is a difficult matter to get the average householder to understand just what is required in the way of care, so that repeated failures have discouraged a great many. Dormant roses shipped in from the East generally arrive with the roots badly dried, and a large percentage of them die. Reputable concerns, should, for their own sakes, use more care in packing shipments for the arid States so as to prevent this drying out. Shipments are also made by the itinerant peddlers, who care nothing for the interests of their customers, and the buyer is not entitled to much sympathy when he finds his investment a total loss. But such transactions are an injury to the business, for a man is loath to try again if his first purchase proves a failure.

Roses which are hardy in regions where the temperature goes very much lower than it does in Denver, often Winter-kill with us, but it is not the severe cold that kills them. A plant suffering from drought will not endure the same degree of cold that it would if the soil were in a reasonably moist condition. Since the first of November we have had a total rainfall of less than 1 1/2 inches up to the 15th of March, and during that time we have only had three storms where the precipitation was one-quarter inch. Then again we have a great many warm Winter days, and especially warm days in February, March and April, which make the buds swell, only to be severely frozen later on.

During this same period the nights are generally about 25 degrees colder than the days, but this difference sometimes reaches to more than 50 degrees, and on rare occasions to nearly 60 degrees. It is obvious that a day temperature of 70 degrees, followed by a night temperature of 20 degrees in April, is more than any rose plant can well withstand.

The drying winds and the bright sunshine also work a great deal of harm, and with us it is more essential to provide protection from the sun than it is from the cold. We find that plants on the north side of a tight board fence generally come through the Winter in pretty good shape, while those on the south side of the same fence are very apt to die. Tea roses do not seem to have vitality enough to withstand our Winters even when protected, but the hybrid teas do very nicely and are planted quite largely. Climbing roses are apt to have the wood badly killed back unless they are in a position where they are sheltered from the sun.

Owing to our dry Winters, few hardy roses are planted in the Fall, and Spring planting of field-grown stock often meets with failure unless the planting is done very early. In our establishment we have advocated the planting of young roses from Finch pots in preference to field-grown stock, the results being much more satisfactory. By Fall these roses are vigorous bushes and in good condition to endure the hardships of Winter. Roses on their own roots are much to be preferred to budded stock for the garden, because if the tops are badly killed back they are likely to make good growth again from the bottom.

Colorado versus Eastern Methods.

I find that in many quarters the idea prevails that an apprentice who has served a year or two in the East can come to Colorado and rank as a first-class florist. In other words, it is thought that our methods are crude; our growers ignorant and unskillful, and our structures of an obsolete type. We are apt to be a little resentful of such an assumption, for it is erroneous, and while I do not wish to appear boastful, it is due the florists of our section to say that they are an intelligent lot of men, whose character and methods will not suffer by comparison with the florists of any other section. While our houses are not as expensive or as extensive as some in other parts of the country, they are in the main well suited to the purposes for which they are intended. Our rose growers do not cut a large number of flowers on extra long stems that would grade as "specials" in this market, because our market does not demand much stock of that grade, and also because our climate tends to produce a more slender growth and a more early setting of the buds; but the stock averages well, is well colored unless faded by too much sun, and would sell well in any market.

Nothing which I have said should be construed as implying that the problems with which we contend are more difficult than those encountered in the Eastern States, but they are different. Our ranks are constantly being augmented by accessions from the East, and any florist who has succeeded there may confidently expect to succeed anywhere; but he will make a great mistake if he allows his previous success to blind him to the fact that a strange country means strange conditions, and that those who have gone before him are in all probability able to aid him by a recital of their own mistakes. Whether they will aid him will depend largely upon his own attitude.

The people of the West speak of a newcomer as a "tenderfoot," and until he has become acclimated he

will find it polite to assume a cock and bull demeanor. If he does he will receive a cordial welcome, and find his fellow florists a lot of good fellows; but as he begins by commenting adversely on what he sees, and sins still further by predicting the thing he proposes to accomplish, he cannot wonder if the natives stand back and prepare to laugh, when he proves the truth of the adage that "Pride goeth before a fall."

Most rose growers who come to our climate from the East come with a feeling that the dry air and continual sunshine are all they need to insure success, and there is no disguising the fact that we are free from troubles that are so serious a matter to our Eastern brethren during the dark days of Winter; but dry air and sunshine are not the only essentials. The regions where vegetation grows luxuriantly are regions that have a humid atmosphere and the cloudy days which necessarily come with such an atmosphere. Many a rose grower has come to Colorado, and starting advice has attempted to dry off his roses in the Summer for the purpose of starting them up later, as he had been accustomed to do. The drying is easy, but the subsequent starting is a problem. We frequently carry over roses to the second and even the third year, but we do not attempt to stop them, and we keep them practically in full growth, even if we propose to transfer the bushes from one house to another.

The Cut Flower Supply.

Just at present in Denver the supply of cut flowers is decidedly in excess of the demand. This is apt to be true with us for a short time in the Fall and again in the Spring, but during the rest of the year the supply and demand seem pretty well balanced. There was a time when a great many roses were shipped to Colorado by Eastern growers, but I believe that practically none are shipped in now.

The people of Colorado as a class are what would be termed "good spenders," but not in the way that seems to be generally imagined. There are very few instances of the lucky miner with more money than he knows what to do with. They generally buy what they have use for, and are willing to pay a fair price for it, but it is a mistake to suppose that they are disposed to throw away their money. On the other hand, what is commonly known as "shopping" or "haggling" for the sake of getting a small reduction in the price is not very much practiced.

Prices.

The prices which are obtainable in the Denver market are never as high as the highest prices obtainable in the Chicago market, especially at Christmas, but prices are more even the year through, and a considerable part of the retail trade is supplied under contract, where the prices are fixed in advance. No one has ever made a success of a wholesale commission house in Denver, and it looks as though such an enterprise could not be a success until there is room for two such concerns, for it is hard to get the growers to place confidence in a man who has no competition.

As nearly as I can determine, the forcing of roses in Colorado dates back only to 1873, when Gus, Opitz grew a dozen plants or so. The following year Rushmore & Son planted Hermosa, Isabella Sprunt, Safrano and Lamarque, all in a house about fifty feet long.

The Varieties Grown.

I have sent out numerous inquiries, and using the replies received as a basis, I estimate that the florists of the State are at present forcing about 35,000 American Beauty, 30,000 Bride, 20,000 each of Bridesmaid, Mme. Abel Chatenay and Richmond, and 10,000 other roses, including Alice Roosevelt, Killarney, Perle de Jardins, Kaiserin Augusta Victoria, and Kate Moulton. It is interesting to note that not a single concern reported any Liberty, and that rose seems to have been completely supplanted by Richmond.

The Retail Business.

The retail business in the State probably approximates \$650,000 per annum, or \$1 for each inhabitant. I would not like to venture an estimate of the amount of wholesale business done with adjoining States, but it is considerable. These figures must seem absurdly small to Chicago florists who are accustomed to place with a million feet of glass under one management; but some day the men who have grown rich in Chicago will make their homes in Colorado, where Summer and Winter are alike delightful, and we in our turn will build large places and get rich catering to their wants.

The Prospect.

Just at present there does not seem to be any opening for increased areas of glass in the vicinity of Denver, but there are doubtless a number of small towns in the State where a florist could start in a modest way and gradually build up a business which would be fairly remunerative. Such a man would do well to work a year for some established concern where he could observe the methods practiced, and he could then start for himself with less risk of costly mistakes. If success came slowly he would find some compensation in the joy of living among a warmhearted and good-natured people in a glorious climate with noble mountains in view, whose charm would over-weigh. Who better can any country offer than moderate financial success in such an environment?

The Adaptation of Soils to Varieties and its Application to Indoor Cultivation.

Read before the American Rose Society at Chicago, March, 1908, by Gustavus B. Magnadier, Bureau of Soils, United States Department of Agriculture.

The whole work of the Department of Agriculture is apportioned, according to the character of the problem, among the various bureaus of which the Department is made up, one of these being the Bureau of Soils.

This bureau has allotted to it the duty of surveying and mapping the soils of the United States and of making all investigations concerning them. The problems with which it deals are by no means the simple affairs that many who fail to appreciate what the soil is, what it does and how it does it, are inclined to think. To them the soil is so much dirt. It is to them a lifeless, inert mass. It is necessary, to be sure, and therefore to be tolerated.

We who take a deeper interest, however, know the soil as it really is. Whether we are accustomed to study it in the laboratory or to use in the field the garden or the greenhouse we know that far from being just so much dirt it is a highly complex body. Far from being an inert lifeless mass, it is most emphatically a thing of life. For every living thing, bush, tree or shrub that we see upon its surface, myriads exist within the soil itself. One of the duties of this bureau is to study these soil organisms and to find out what functions they perform.

Soils also vary in composition, and there may be present substances actually harmful to plants, or some of the essentials for plant growth may be wanting, hence

In the work of the Bureau of Soils in the field one of the most striking soil characteristics observed is the special adaptation or fitness of certain soils for certain classes of crops.

That certain classes of soils are peculiarly adapted to the growth and production of certain crops has been recognized by agriculturists of all lands, and in the writings of some of the highest authorities on agricultural topics such expressions as good "corn soil" or "wheat soil" are frequently to be met with.

Not only is this adaptation for certain crops observed, but in addition a special adaptation for certain varieties of the same crop.

While it is no doubt true that there are other factors which perhaps are to be considered in field practice, yet we feel assured from our observations in this direction that no single factor is of as great importance as the soil.

Adaptation of Soil to Varieties.

In regions where uniform soil and climate abound there is frequently to be found one particular variety of a crop that gives far better results than any other variety, though it is agreed on all sides that the soil is a good one for the crop, generally speaking. Moreover, when two sections are situated so as to be embraced within the same climatological zone, it frequently happens that the predominating soils are quite different. In such a case it is usually observed that the successful planters upon each soil type are growing the same or closely related varieties. There will, however, be found a considerable difference between the varieties grown on the different soil types. Not alone with field crops is this mutual agreement of soils and specific varieties to be observed but with fruits and with vegetables.

The sandy and gravelly soil in Steuben County, New York, is especially adapted to the Carman potato, while on the light loams of the southwestern section of New Jersey, Irish Cobbler and Green Mountain produce the best crops. On the clay loams in northwestern Ohio we find such late varieties as Iona and Rural New Yorker best suited to prevailing conditions, while Bliss' Triumph is especially adapted to the black prairie soils.

In those localities where truck growing is carried on commercial success depends very largely on the proper observance of this intimate and important mutual inter-relationship.

In a majority of the cases observed it was found that varieties not only were better suited to certain soils, but that the class of soils specially adapted for their growth was similar to that upon which the variety was developed.

This is because the plant is in no sense a fixed unchangeable organism restricted to a definite form. On the contrary, it is highly plastic, capable of being changed or modified in all of its parts. We can by cultural methods alone effect many changes, and it is just as certain that as many more will occur through natural agencies. The effect of climate, the character of the soil, whether dry or moist, sandy or clay, all exert an influence tending to change or modify the existing plant characters.

Effect of Soil on Development of Varieties.

We see then that in the development of varieties the effect of soil is manifested, and that to keep a variety pure by freedom from cross-fertilization, is not always sufficient to maintain its varied characteristics. To keep it up to the ideal established by the originator it is necessary to provide an environment quite similar to that

Arcadia

they must be studied from the chemical standpoint.

Soils possess also certain physical properties such as weight, fineness of division, arrangement of particles. They bear certain relations to heat and to moisture. In the physical laboratory of this bureau is determined the influence of these attributes upon the soil and their effect upon its productivity.

The causes of infertility in certain soils, the restoration of the so-called worn out soils, the presence of poisonous substances in the soil as the result of excretion from the roots of living plants, all these demand special lines of investigation, each line being in the hands of specially trained men.

Following these strictly scientific technical investigations of the soil comes the study of soil utilization and management. This comprises the application of these laboratory results to conditions as they exist, dealing with problems of drainage, methods of tillage, the effect of fertilizers and special adaptation of soils to certain crops.

For you may rest assured that field operations must be based on correct scientific principles or they will be of no avail. However frequently existing conditions demand that these principles be modified, yet they can never be disregarded or opposed or disaster will surely follow.

As specific instances I may mention a few of the many cases that have been observed in the field and garden crops, fruits, etc.

The "Drake Cluster," a very high grade and highly productive variety of cotton, has been grown and kept pure on the upland soils of Alabama where it is noted for its superior qualities. This variety when grown on the bottom lands produces but little lint, the plant "going to weed" as it is called.

With some varieties of tobacco, while it is possible to grow on the sandy soils of certain localities cigar wrappers of the highest quality, when the same varieties are grown on the clay soils the product is suitable only for fillers, the quality of which is none too good. With fruits we find much additional evidence of the adaptation of soils to varieties, and in those sections where orange growing is carried on it is now recognized that it is absolutely necessary to select the particular variety to which the soil is most adapted.

With the apple this adaptation is well illustrated by the Newtown Pippin which reaches its highest state of perfection only when grown on the same class of soils, whether in New York or in Virginia. Again, the Baldwin, which also ranks high as a commercial apple in this same eastern region, is especially adapted to a much lighter class of soils.

in which it was developed. For it is now thoroughly understood that a change in environment is accompanied with an attempt on the part of the plant to readjust itself to meet the new conditions. If the change is within the limits of such readjustment the plant responds by changing its physical structure sufficiently to meet the new conditions. If the change is too great the plant dies. Originators of new varieties seldom think it necessary to mention the class of soils upon which the varieties were produced, never perhaps considering the influence that it may exert upon the future of the plants. And I believe that many new varieties which are introduced only to be as suddenly cast aside, disappear from cultivation because their habit is such that there are but few soils really well adapted to their culture.

By environment is meant those conditions that surround the growing plant, and may be considered under two heads—climate and soil.

In climate we include the combined effects of light, heat, moisture, etc. In the field these conditions are always subject to variation, and it is quite impossible for a single growing season to pass without the plants being subjected to climatic conditions more or less hindering their development.

In the soil we have not only the supply of mineral plant food, but seemingly there are in it also forces, not

yet understood, that exert a powerful influence on the habits of the plant, controlling to a great extent its thrift, characteristics and fruitfulness. And the effect of this influence appears whether the plant is cultivated for its foliage, its flowers or its seed.

Indeed I have seen it stated that you can change the nature of a plant only by changing its environment. I do not know whether it is the only way or not, but I do know that there is no surer way.

In a change of environment may or may not be included a change of climatic conditions. A change of soil type alone has been shown to be quite sufficient to bring about changes in the plant that in many instances are so marked as to greatly affect many varietal characteristics.

Soil in Indoor Culture.

If with our field and garden crops where the climatic influences have necessarily such a wide variation the soil proves itself to be so important in maintaining varietal characteristics and habits, is it not reasonable to suppose that with indoor conditions where these factors are under control the relative influence of the soil is increased?

From my own observations and from the testimony of others I believe this to be the case.

It is this phase of soil adaptation that concerns the indoor grower and which is now being investigated, particularly in regard to the soils used in the production of the different varieties of carnations and roses.

In our modern greenhouses we have eliminated climatic variations. We control the temperature by the turn of a valve. Rainfall is displaced by the hose. Ventilation is accomplished without subjecting our plants to damaging winds. In short, it is our business to provide the most suitable climatic conditions for the development of our plants.

general appearance of the plant was comparable in every way with that of the other varieties grown.

Fertilizer Experiments.

A recent experiment carried on to determine the effect of various fertilizers on carnations is particularly interesting when viewed from the standpoint of soil adaptation.

In this experiment two soils were used, various fertilizers being applied to each, comparison being with the soils to which stable manure alone was added. As it is no part of my present purpose to discuss the relative efficiency of fertilizers I will consider only the results obtained from the use of stable manure. These soils were planted to four varieties of carnations of undoubted merit; and were grown in a range of three even-span houses without interior walls, making it practically one house. Particular attention was paid to the maintenance of favorable conditions, so that the only point of difference was in the soil in which the plants were grown, the same number of plants of each variety being grown in each of the soils used.

Eachantress gave only eighty-five per cent, as many blooms on soil No. 2 as on soil No. 1; Mrs. T. W. Lawson eighty-seven per cent, and Robert Craig but seventy-eight per cent, on the corresponding soils. Lieutenant Peary somewhat reversed conditions and on soil No. 2 produced four per cent, more blooms than on soil No. 1.

We have then three varieties out of four that showed a very decided falling off accompanied with a difference in soil only all other conditions being the same. In one case the results are to all intents equal in each soil. Now I take it that such results are not due to chance. There must be a reason. And I do not think it too much to offer the difference in soil as this reason.

Mrs. Lawson, Eachantress and Robert Craig found

The group of climbing roses from M. H. Walsh Woods Hole, was one of the features of the exhibition. It contained very well finished plants, especially of the varieties Delight and Haywatha, two of the most pleasing of Mr. Walsh's productions.

First-class certificates of merit were awarded to E. A. Wood for carnation Mrs. Geo. A. Frost; to M. H. Walsh for new rose, Exotic, and to William Sim for new sweet pea, W. W. Smalley and Mrs. Alexander Wallace. The exhibit of sweet peas from Mr. Sim was extensive and fine, showing the high quality of these flowers which he can produce.

Cultural certificates were awarded to J. L. Smith for an excellent plant of Nephrolepis Barrowsii, and to William Downs for vase of yellow anthurium.

Honorable mention was given to W. A. Manda, South Orange, N. J., for Asparagus elongatus; F. C. Green for Roman hyacinth Excelstor; W. W. Rawson & Company for Lobelia Kathleen Mollard and for Anchusa italica, Dropmore variety; H. A. Drier for Marguerite Blush Queen Alexandra and to M. H. Walsh for new Rambler rose Celeste.

The W. W. Rawson silver cup, for the largest and best display of narcissi, was won by W. A. Riggs. The displays of bulbous plants were very fine.

Orchids were quite a feature of the show, the collections from Mr. S. A. Borden (E. Varden, gardener) and from Mr. J. E. Rothwell (E. Johansson, gardener), being extensive and attractive.

The cut rose exhibits were also very fine. W. H. Elliott was first for Bridesmaid, for Liberty and for Safrano, and second for Bride and for Killarney. E. Holmes of the Montrose greenhouses took first for Bride, second for Bridesmaid and third for Richmond. The Waban Conservatories won first for Killarney and second for Richmond.

Gold Medal Group of Amaryllis

Boston Spring Flower Show

General View

Exhibitor, T. D. Hatfield.

It is clear then that the only change in environment given the plants in a house where a light loamy soil is used, compared with one in which the benches are filled with a clay soil, is the soil itself.

Yet with this difference in soil only, we frequently observe that there is a considerable variation in the size, brilliancy of color, and other characters of the bloom of the same variety. A visit to the flower markets of our large cities affords many illustrations of these differences, when the products of the various establishments are seen side by side.

It is not to be expected that the soil adaptation is equally well defined with all varieties. Some being more fixed offer a greater resistance to change than others, nor should we expect to find the modifications that arise to be always in the same direction.

Not only in the character of the bloom may the influence of the soil appear, but in many cases it will be found to affect the habit of the plant itself. It does so in the field with outdoor crops, and it is reasonable to think that it exerts a similar influence on plants grown under glass.

A partial examination of the soils used by a few of our rose growers has already been made, and it discloses the great variety of soil types that are being used in the production of this crop alone. Ranging in texture from dense clay loams to porous sandy loams practically all intermediate grades are represented. Yet in many instances two very widely differing soil types are being used for the production of the same variety, resulting perhaps in a depreciation of the quality or quantity of bloom of one variety or the other.

I recently visited a rose house where I found one of the most popular varieties, a rose of great merit, giving such poor results that its cultivation is to be abandoned after this season. In this instance the size of the blooms was materially affected, though in other respects the

one of the soils far more adapted to their special requirements. With Lieutenant Peary the reverse was true though the adaptation was not so marked. Nor is this illustrative of adaptation of soils to a whole race of plants but to specific varieties.

It shows also the impropriety of attempting to draw definite conclusions as to the relative merits of different varieties, unless it can be shown that the soil type is equally well adapted to all of the varieties grown. It is, however, in determining the varieties that will likely prove most remunerative to the individual grower that such tests have their real value. For with a single bench, in one season, information of vast importance for his future guidance is readily obtained.

(To be continued)

Boston Spring Flower Show.

The Spring show of the Massachusetts Horticultural Society, which was held on Friday, Saturday, Sunday and Monday, was in many respects the best of its kind seen in Boston for many years. The quality of the exhibits was very fine and there were many of them of special interest. The arrangements were very artistic, and the attendance all that could be wished for.

As usual, the main hall was devoted to plants, the cyclamens, cinerarias, etc., being in the center, with groups of foliage and flowering plants on the sides. R & J. Paraphar & Company had an extensive group of flowering, bulbous and foliage plants, the general arrangement and harmony of color of which was so effective that the society's gold medal was awarded. Another group of plants that received a gold medal was an extensive exhibit of seedling amaryllis from Walter Hunnewell (T. D. Hatfield, gardener). Silver medals were awarded to M. H. Walsh for new rose Arendia; to A. Roper for carnation Bay State; and to William Nicholson for carnation Afterglow.

Non-commercial growers of roses were William Rust, gardener to Dr. C. G. Weld, and Mr. Pembroke, gardener to Mrs. J. C. Phillips.

In the carnation classes for 100 blooms S. J. Goddard won first with a superb vase of Helen Goddard. For crimson S. J. Goddard was first with Harry Fenn; Patten & Company, second with the same variety; and Mr. Goddard, third, with Octoroon. For scarlet Mr. Goddard was first, with Victory; Patten & Company, second, and C. S. Strout, third, with same variety. For white Mr. Goddard was again first, with Lady Bountiful; C. S. Strout, second, with White Perfection; and S. J. Goddard, third, with White Perfection. For light pink Backer & Company took first, with Rose Pink Eachantress; S. J. Goddard, second, with Winsor; Patten & Company, third, with Winsor. For Daybreak shade of pink, C. S. Strout won first, with Eachantress; S. J. Goddard, second, and Mrs. J. E. Phillips, third, with same variety. In dark pink, Mrs. Mansfield was first, with Mrs. Lawson; Wm. Whitman, second, with same variety, and Patten & Company, third, with Helen Goddard. In the variegated class Backer & Company took first, with Mrs. M. A. Patten; and Patten & Company, second, with Variegated Lawson.

The violet displays were good. H. F. Woods was first, and H. F. Calder, second, for doubles; and for singles, William Sim took first, with Boston, and Estey Brothers, second, with Princess of Wales.

Other groups of plants of special note were the collections of Edward MacMulkin, Harvard Botanic Gardens; Thomas Roland, Mrs. J. L. Gardner and of General S. M. Weld.

Among the competitors in the private garden class, the principal exhibitors were Wm. Rust, W. A. Riggs, Martin Sullivan, E. Johansson, T. D. Hatfield, Thomas Cotes, Wm. Thatcher, J. L. Smith, George Pezalla and J. Lawson. J. W. D. SEAN.

Proper Size of Commercial Rose House.

BY WILLIAM H. ELLIOTT, NEW BRIGHTON, MASS.

What is the proper size of a greenhouse to grow roses for commercial purposes? is the question assigned to me. What I think is really wanted in this case is to know how large one really thinks a greenhouse should be built. My answer will be more on this line.

First, I wish to apologize for coming as an Eastern man to the city of Chicago to answer a question of this kind, for, if there is anyone who knows how large greenhouses should be, it is the Chicago man. I can, however, give you an answer in very few words. A greenhouse, for commercial purposes, should be as large as a man has money to build. That is, whatever money he is going to invest in commercial houses might best be put in one house. I would not hesitate to put 150,000 feet under one roof. In fact, one could build a greenhouse to good advantage as long as it can be heated from one central station. One can heat 1,000 feet each way with a gravity system, provided he had fall of 10 feet from the radiating pipes to the water line of the boiler. With a vacuum system I presume they might be carried a great deal farther. Just how much I could not say, as I have not used that system.

Wide Single Roof Houses.

The continuous ridge and furrow houses need only be limited by the money to be laid out, as the heat could be carried 1,000 feet each way. Much can be said in answer to the question of the advantages of the ridge and furrow houses as compared with the wide single roof. I shall speak in favor of the wide single roof, although I must admit that the well constructed ridge and furrow ranges around Chicago are as fine houses as I would expect to see anywhere and I expect a strong argument in favor of that style from those using them. What influences me most in favor of the single roof is the snow. A roof that will clear itself of snow in Midwinter, at a time when the days are short, and prices high, is certainly to be desired. Another advantage of the single house is that it is easier to fill and empty; also that high houses are less expensive to heat. The variation of heat in the daytime is not so great. The houses should be easier ventilated and handled. Larger amount of air space inside the greenhouse has proved to be an advantage rather than the disadvantage most growers supposed it would be. Mr. Holmes, in his address on "Rose Culture" before the Gardeners and Florists' Club of Boston, stated as his opinion, that 40 per cent. of the improvement in rose growing in the past twenty years was due to the up-to-date greenhouse, and I think he was right. It is one of the facts that we must accept, that better stock can be grown in a large greenhouse than in a small one.

Width of House.

In regard to the width; it is hard to predict how wide greenhouses will be built in the next twenty-five years. Of course, with the ridge and furrow plan, the width

Single Bloom of Rose Mrs. Jardine.

Courtesy Robert Scott & Son.

is really unlimited, as the ventilation is taken care of as you go along; but how wide do you suppose greenhouses will be built and depend upon a single run of ventilators to ventilate them? We have already seen them built up to 150 feet in width. Unfortunately, this wide house was not well constructed and is not considered a success, but it is really not the width; it is the question of construction. If a house was thoroughly and properly constructed could a house of this size be handled to advantage? I have not seen this wide house during the Winter season; have no idea how the stock is growing. I looked this house over thoroughly at the time of the convention last Summer. It seemed to be considered an impracticable house, but the only reason given was the construction of the house. The question really is, if the house was strong and securely built would a house of that kind grow good stock? I would say that in that house at the time I saw it was growing as nice a lot of American Beauty as I could find anywhere. If the house will grow the stock, then what is really the vital question?

The next question is, can a house of that size be constructed and run as cheaply as a narrower house? There are a good many questions there that would need more knowledge and experience than I have had to answer. I cannot recommend the construction of houses of any such remarkable width. Sixty feet wide, with a pitch of six inches to the foot, I find to be thoroughly satisfactory. I would not hesitate very much to increase that width considerably, but as soon as I increase that width, I must splice my bars, which I have not done on any of my large houses. Ventilation seems to be good. The air in these large high houses always seems better than in the small ones. I do not quite understand why we need to ventilate greenhouses except to reduce the heat.

Would the air in a greenhouse keep pure and good without being renewed? If not, what is it that spoils it and would it not be much more serious in houses with much less air space?

Some Construction Drawbacks.

I think it only fair that I should state what seems to be the most serious drawbacks in the construction of these large houses. In the first place, the unequal expansion of ridge, purlins, plates and sills. It is also a long distance to drive around them with a cartload of

soil; leakage is increased if roofs are not kept in the best of repair. There is also great danger from the wind in houses of this size. The movement of so large a body of air as is contained in these houses strains the glass much more from the inside than in the smaller houses. They need to be built strong and glazed thoroughly. I have made up my mind to double nail the glass at the end of these houses.

Horticultural builders charge more to cover the same ground with houses of this kind than they do with a number of smaller houses. They are right in this, for they need stronger and more thorough construction. I do not like the iron frame with heavy rafters for this construction. We must guard carefully against the enlarging of our houses without properly strengthening all parts. My first large houses were weak in the outside walls. Thorough and permanent construction is what is needed, for many reasons; not alone on account of wind and weather, but because this business has grown to be permanent and important enough to have a place of its own and is not built up with the idea that it will some day be torn down and the land used for building purposes. A man building a factory does not have any such idea and our establishment should be just as permanent, or more so, than any factory. A proper location should be selected with great care; then get the best to do with and build thoroughly enough that the place can be inherited by your children and grandchildren. The fact that the growing of cut roses as a business was born inside of the last fifty years is no reason to suppose it will die out inside of the same time.

While I am wandering away from the question, allow me to impress on you the importance of taking the best of care of your house when built, especially in regard to painting.

Godfrey Aschmann, Philadelphia.

Among the wholesale growing establishments in the city of Philadelphia there is perhaps none that has a wider distributed shipping trade than that of Godfrey Aschmann. Mr. Aschmann has been making a specialty of flowering and decorative plants for the trade for quite a number of years, and has been eminently successful in the undertaking. Almost yearly some additions have been made to his greenhouses, but it seems however large a stock he prepares for the oncoming holidays, the demand is always equal, and he has no difficulty in effecting satisfactory clearances. For the coming Easter his lilies are in superb condition, and while there has been a large percentage of bulbs that had to be thrown away on account of disease, he still has a very large supply, and the stock was never finer than it is at this time.

He is a very large importer and grower of azaleas. He makes personal visits to Europe, selecting the varieties most suitable for commercial purposes, and this season his stock is in superb condition and is seen in all sizes almost. Spirea Gladstone has been forced in large numbers, and the plants are in excellent form, showing a profusion of blooms. There is a large collection of hydrangeas which will be in flower nicely for Easter; also a stock of Cineraria hybrida. Hyacinths, tulips and daffodils are grown extensively, but, with the lateness of Easter this year, no forcing will be required for most of this stock.

Mr. Aschmann is a firm believer in printers' ink, and has gained a shipping trade into every State in the Union through the means of his liberal advertising.

CLUB AND SOCIETY DOINGS

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY.—The regular monthly meeting was held at Glen Cove, March 11. President Jenicke in the chair. In the competition for points, cyclamen, shown by S. J. Trepass, scored 76; mixed carnations, H. F. Meyer, 82; mixed carnations, Mr. Cleves, 77. William Eccles showed a fine vase of a pink sport of Enchantress, also one of Beacon. H. F. Meyer received honorable mention for his vase of carnation Aristocrat; Mr. Mense honorable mention for vase of mixed flowers. Charles Bertanzel was awarded a silver medal for his fine exhibit of carnations at the annual show of the society.

The May meeting will be held at Roslyn, L. I.

THE WEEK'S WORK

Timme's Timely Teachings.

Bedding Begonias.

All the varieties of Begonia semperflorens are excellent for Summer bedding and as such are in ever-increasing demand. Although true florists' stock, since only the professional greenhouse man is enabled to furnish these plants in proper shape at the proper time, yet they are as easily raised as the humblest of garden annuals. They are, in truth, less resentful of unavoidable neglect than asters, for instance, and at the same time more grateful of any extra effort in their rearing than many other of the more common things florists find it to their interest to grow in quantity. All this goes to prove that begonias of this class are well worth being grown by every local florist and also deserving of that degree of good care which results in the best of stock. Early started seedlings, soon becoming crowded for room in their trays, should by this time be in thumb pots or in their second trays.

Centareas.

Early April is the best time to start the seeds of Centaurea cyanus, the Emperor cornflower. This variety may be planted out after being raised in a frame or very mild hotbed, if early flowers for the market are wanted; or the seeds may at once be sown in rows where the plants are to bloom, a succession of crops during the Summer being desirable if grown for the wholesale market. This is still one of the easiest grown and best paying outdoor crops for cutting. A far better article, though, is obtained by growing the newer kinds of sweet sultans, especially if a greenhouse bench, or several of them, can be spared for their culture. The varieties producing the finest flowers under careful indoor culture are Centaurea americana, C. margaritae and C. imperialis, all of them easily worked into flowering plants by Midsummer from seeds started now. They require good light, lots of ventilation and caution in watering. They can be had in several separate colors, all of the flowers being of peculiarly attractive form and delicate shade, the pure white

strains, however, faring best at the cut flower market. While they last any length of time after being cut, it is advisable to change the water quite often and to let the stems be out of it for hours at a time before again placing them back into water, lest they become slimy and unfit for handling—a serious drawback to their keeping. Not so much raised as formerly are Centaurea candidissima and C. gymnocarpa, the dusty millers of old; still they made attractive edgings around flower beds and borders, and for that purpose they are not to be despised even now. The seeds of these may still be sown and fairly good stock be had in good season for a time when the making of foliage beds is in full swing.

Primula obconica.

Another sowing of Primula obconica, the most useful of greenhouse primroses, is now in order. The highly improved strains not only produce the finest, largest flowers, but are also the least exacting in their cultural wants and should therefore have the preference every time when ordering seeds. A light, porous kind of soil for the seeds and something a trifle richer and heavier at every subsequent transplanting suits these primulas perfectly. Not by any means over-tender or fragile, they, after all, enjoy a treatment usually afforded plants of that nature; at least a much finer quality of flowers for cutting is obtained by adopting cultural methods calculated to encourage luxuriance and exceptional vigor of leafage and florescence. The seedlings, for example, will more quickly attain size without loss of health or vital strength in a fairly warm and moist greenhouse than in the most closely watched outdoor frame, the plants to be shifted before they become rootbound into pots just a size larger, with probably but one or two longer shifts at the end of their course. This will be in August for the earliest started and as late as December for some of the last lots. Soon after this final transplanting and during the time buds are pushing and flowers opening they are as liberally and as regularly treated to liquid stimulants as the greediest of feeders. Thus Primula obconica is made to furnish splendid material for cutting and this, too, at a time when due appreciation of its value is least likely to be

withheld, despite its ill repute of being dangerous to handle, which with ordinary care it is not. As a flowering potted plant it also sells well, has done so for years, requiring no extra amount of caretaking in its raising.

Cyclamens.

It is well to approach Easter with a goodly number of nicely finished cyclamens in readiness for the coming rush of business in potted flowering plants. It is not nearly as difficult to hold back and keep in presentable shape any of these plants apparently ahead of time than most other things intended to figure as Easter stock. A quite cool and judiciously ventilated house, one where superfluous fire heat can be turned off at any time, is probably at every grower's command, and that is the place where cyclamens, not too far gone or actually beyond their prime, will remain for weeks in the very pink of condition. Cleanliness, the absence of soot, dust and insects, protection against sunlight, the discontinuance of fumigation and liquid feeding, plenty of free space between plants and regular but careful watering and spraying for the good of roots and leaves but not a drop to touch any of the opening flowers, are points to be heeded in retarding cyclamens of flowering size. The small plants, young cyclamens started last Fall, on the other hand, are among the slowest of seedlings, need a deal of pushing, and this should be freely accorded at this time of year by having recourse to about the same method of apparently high culture as advised for the small seedlings of Primula obconica, i. e., warm quarters, generous spacing, frequent transplanting, the full light, care in watering and cleanliness throughout.

Field, Garden and Lawn.

Very much of the outdoor work planned for the ensuing season must be done early to be worth doing at all. The planting of deciduous trees and shrubs, including hardy climbers, hedge rows and garden roses should be attended to first of all. All other operations involving the handling and preparing of the ground for cultural purposes, as the sowing of seeds, the setting out of plants, the dividing and replanting of perennials, plowing, digging, raking, etc., should not be undertaken before the ground is in fit condition to be worked, as is so often

done. Heavy clay soils in particular, if it can possibly be avoided, should not be trampled or driven over, stirred or in any way handled while yet in a cold, soggy condition. After the frost is out of the ground, the standing pools from melting snow have disappeared, it takes the enlivening breath and constantly increasing sun heat of Spring often but a single day to put things in field and garden in proper shape, the soil in good condition for the work contemplated. It is then time to go at it with a will, to make sure of what is most pressing, to take advantage of the kindly spell of smiling Spring weather while it lasts, remembering its proverbial April fickleness. The first two weeks of the month have always proved the most propitious for the sowing of lawn grass and all seeds of hardy and half-hardy annuals that bear no transplanting or such as will do better if started where they are to remain. Among operations in the open that should now not be needlessly delayed, if not already seen to, are the pruning of hardy outdoor roses and shrubs, trees and vines in general, excluding, however, all such shrubs as flower early, then the removal in part or all of any sort of Winter protective covering, and an all-around tidying up as a matter of course.

Ardisia crenulata.

With so much to attend to at this season and with Easter now so close at hand, the grower is apt to forget that preparations for far away Christmas are now as much in order as for the nearby Spring holiday. Berried plants among Christmas stock play an important role, and among these again ardisias are by far the prettiest, the least plebeian at any rate. While still bottom heat comes to our assistance in the raising of fine little plants from seeds sown now, we take advantage of this circumstance and, if luck, as every year, favors the attempt, splendid little bushes by next Fall will be the issue. Ardisias are much slower in their growth, needing greater heat and care in starting than do Jerusalem cherries and celestial peppers; hence a good and early beginning signifies quite a gain in their culture. Most of these seedlings will only be first-class plants after being carried over for two Summers, a few being said to stock next Winter. FRED. W. TIMME.

Do Not Order Your Easter Advertising Matter Until You Have Examined Our Original

EASTER Announcements

SUCCESSFUL BUSINESS cannot be obtained without special endeavor. One's own personal efforts need backing and the most helpful backer is **WELL-DIRECTED ADVERTISING**, carefully selected and freely used.

For those florists who cater to the **EASTERTIDE TRADE**, we have prepared six graceful and attractive designs which we offer at a price that appeals to the user of good printing. We furnish **THESE EASTER ADVERTISING ATTRACTIONS** in the shape of small oblong four page folders, printed in the finest style and on the best heavy enamel paper, with the engraving covering the front page and the advertisement on the third page. A fine quality baronial envelope is included in the price.

Delivery is F. O. B. New York at the following prices:

100 Folders and 100 Envelopes	\$3.50
250 Folders and 250 Envelopes	6.00
500 Folders and 500 Envelopes	10.00
1000 Folders and 1000 Envelopes	18.00
Each additional 1000, at same order	15.00

Our orders for 500 or over customer may select two or more styles without extra charge. If interested and at once for a sample set of these Announcements. They are original designs, made expressly for the season of 1908, and will interest you. It only costs one cent to look them over.

We expect lots of orders for these Announcements, so would advise you to act promptly if you wish yours filled in good time. Address

AMONG THE GROWERS

Anton Schultheis, College Point, N. Y.

A recent call at the establishment of Anton Schultheis, College Point, N. Y., revealed the fact that the preparation of flowering plants for Easter has been this year, as it has been in many years past, eminently successful, and a grand lot of stock awaits the oncoming rush which never fails to materialize at the Easter holidays.

Among the many good things seen here are several new roses, which give great promise for commercial purposes. Particularly would we refer to a variety named Flower of Fairfield; this is really an everblooming Crimson Rambler, and the trials so far have proved beyond a doubt that the word "everblooming" describes its character correctly. Another new rose is Apple Blossom, a variety of the polyantha type, with beautiful light pink flowers, carrying the fragrance of the apple blossom, which is a splendid grower and extremely floriferous. Hiawatha and Anny Müller are also offered, but, of course, the greater stock of plants prepared for Easter are of the better known sorts, such as Dorothy Perkins, Crimson Rambler, Lady Gay, Baby Rambler and others.

The way the roses have budded this year is something remarkable. Growers will remember that in 1907 a great many plants of the Rambler type came blind, probably due to the Autumn previous which was unfavorable for ripening the wood. No fault can be found with the way the plants have budded this year, however. Every shoot carries its cluster of buds, and the plants are as near perfection as it is possible to get them. Various methods of training have been used—some are in standard form, some in bush form; several in basket shape are very beautiful, and perhaps the most taking form of all are those which are trained into the shape of a spreading umbrella. Only a few of these were made as a trial, but the demand for them has proven that it is a popular shape, and more of them will be grown another year.

Lilies, as usual, are a prominent feature, and there are four houses of nice plants, with a good average of blooms per plant, and of a nice suitable height for any purpose desired. Azaleas have not been grown in quite as large numbers as has been usual for Easter sales. There is an excellent collection of plants in all sizes, however, among them being both pyramids and standards in addition to the regular commercial shaped plants. We noticed a new color among the azaleas—a variety labeled Emperence. The flowers of this plant are of a bluish-lilac, and to us it would seem that this color would become a favorite in the trade; it is very distinct from anything else, and still delicate enough in its tone to be very pleasing. Especially under artificial light do we think that the color will be effective. Other varieties in nice shape are Charles Encke, Firefly and VanderCruyssen.

The well-known yellow flowering plant, *Genista racemosus*, has been grown rather extensively, it being one of the subjects that always clear out well at Easter. These plants are in all sizes, from those in 5-inch pots upward, many fine specimens being seen among them. A nice collection of *Acacia paradoxa*, in specimen sizes, gives promise of being in nice shape for Easter, as also does a collection of the Spring favorite, *Boronia elatior*. *Ericas* are always a strong feature with Mr. Schultheis, and a splendid collection of the yellow variety *E. Cavendishiana* is in evidence. The pink varieties, *E. trauslucens* and *E. cupressina*, are grown in large numbers, and are in particularly fine condition—full of buds and just right for time. There is also a nice batch of the well-known favorite, *Erica melanthera*. *Rhododendrons* are not grown so extensively; still, there is quite a large collection of medium-sized plants of the best varieties. *Hydrangeas*, in both pink and blue-colored sorts, are coming along nicely, though the numbers grown are not equal to those used last year. A nice batch of orange plants of marketable sizes—some in full bloom, others carrying ripened fruit—are in evidence. *Spiræas*, principally of the Gladstone variety, are also a feature.

In bulbous flowers thousands of pots and pans of hyacinths in the best varieties, tulips, narcissus and lily of the valley are being brought in so as to be at their best at Easter. In decorative plants, palms, ferns and dracaenas in several varieties are grown quite extensively.

Mr. Schultheis added one new house last Fall, and believes for the present that he has glass enough. He is ably assisted by his son, Anton, who has now

become competent enough to act as foreman. It is twenty-two years since Mr. Schultheis established himself at this place, and every year has seen some addition to the plant, until at the present time he has one of the largest and best-known establishments in the vicinity of New York, with a shipping trade that reaches all over the country.

John Scott, Flatbush, N. Y.

John Scott at his establishment in Flatbush, N. Y., has again a very choice lot of lilies for Easter. Six houses in all are devoted to them, and in height, average of buds per plant and general thrifty appearance, they are indeed a grand lot. Whether Easter comes early or late, one will always at that time find a good collection of lilies in Mr. Scott's greenhouses. He has become an expert in this line, and it would seem that a failure with him is out of the question.

In addition to lilies he has coming along a nice collection of azaleas, also several benches of potted spiræas and genistas. Pot roses are grown only in moderate

The Fruit Auction Company Building, New York.

numbers; but big plants of the new Marguerite Queen Alexandra are quite numerous, and many of them should prove good sellers for Easter. There is quite a collection of hydrangeas that will be in good shape, which are nicely furnished plants of a ready selling size. *Gardenias*, as is well known, are grown very largely at this establishment, and there is an immense crop of buds coming along which will be just right for Easter. These should prove quite a hit, as it is not often that gardenias can be had in quantity at that time.

In decorative plants, which are also grown quite extensively here, there is a nice collection of aralias, which should prove quite desirable, with their dark and finely cut foliage. In variegated foliage plants, crotons in several varieties are grown quite largely, and many nice plants of the broad-leaved dracaenas are in evidence.

Nephrolepis Scottii continues as good a seller as ever, and an elegant line of plants of this well-known fern has been brought to perfection. Mr. Scott is also growing quite a collection of medium and large-sized palms, principally kentias, and a number of well-grown araucarias in suitable sizes for decorative work.

The Fruit Auction Company's Building, N. Y.

The building of which an illustration is herewith given, occupies the northwest corner of Franklin and Washington streets, New York City, about 90 feet on Washington street and some 87 feet on Franklin street. The main floor is devoted to exhibition purposes, and a smaller salesroom seating about 250. This arrangement provides an area of 67x90 feet for display purposes, being admirably adapted for plants.

The room is well lighted by numerous large windows of French plate glass, being lighted on three sides, and is provided with two entrances, one on either street, each with a five-foot stoop, thus allowing for the loading of four wagons at once. The lower floor is of precisely the same size and has four outlets to the street. It is well lighted and has a concrete floor, thus allowing for all watering necessary.

The main salesroom occupies the greater part of the second and third floors, being two stories in height. The seating capacity of this room (said to be the finest of its kind ever constructed) is about four hundred. The seats are each provided with writing desk attachment, and rise in tiers almost to the ceiling.

Three large high speed electric elevators are used to show samples, these being in full view of the entire audience, placed as they are directly in front of the auctioneer's rostrum. This room, too, is excellently lighted and on dark days large clusters of powerful incandescent lamps immediately over the elevators assure perfect illumination.

The display and salesrooms are finished in hard wood artistically trimmed with ash and are equipped with every modern labor-saving appliance.

It is the company's intention to make prompt delivery, and all the facilities afforded are calculated to be of the greatest value to buyers, as they can have their goods, if necessary, within a few minutes after buying.

The company renders a report of sales immediately after the auction, and that this will be of appreciable benefit to the growers and consignors is beyond question, as he or they will always be kept in close touch with the prevailing market conditions. On the day following remittance is made, together with complete account sales and full information regarding the sale.

A seat for the consignor is provided on the rostrum, and from this point of vantage he can feel the pulse of the trade and note its tone generally.

The company will advertise thoroughly and sell at such hours as the trade demands, due notice being given. For the present, 8 a. m. will be the hour for beginning and it is one of the company's rules to begin all sales on time, so buyers may know that 8 o'clock means just 8 o'clock.

The location is most convenient for out-of-town buyers as well as those from local points. The landings of all the Hudson River boats are within a few blocks, as are many of the New England lines, and only a short distance away are the receiving stations of all the railroads.

The company, employing a large staff of courteous gentlemen and giving every consideration to the right of both buyer and seller, is convinced that upon these lines of fair dealing an important business in the horticultural field can be established, and is willing and anxious to receive suggestions from those most interested with the object of providing a permanent institution for the betterment of the business. Visitors are always welcome and, as there is much to interest and instruct, a call upon the firm is advised.

A KNOCKDOWN PLANT BOX.—The Scientific American describes this receptacle, invented by N. Hight, Wolfboro, N. H., as follows: "The body portion of the box is in sections separable from each other and from the bottom, means being provided for holding the parts closely assembled while the plants are growing in the box, which locking means can be cast off to provide for separation of parts and exposure of earth in which the roots are contained, enabling the plants to be removed and transplanted with their mother earth intact."

ORCHIDS

We shall receive this Spring large quantities of imported ORCHIDS, namely: *Cattleyas*, *Dendrobiums*, *Oncidiums*, *Laelias*, *Vandas*, etc. Our facilities for handling large consignments are second to none. We have four collectors, including our Mr. Carrillo, who collect exclusively for us. Our quality and price are too well known to need further comment—a trial order will prove it.

Carrillo & Baldwin, Secaucus, N. J.

Chicago, Ill.

HAUSWIERTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLOREST CO., 1706 Broadway, J. A. Valentina, Preat. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 6297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Preparing for Easter.

Holiday trade has often been called a gamble, and there is invariably much speculation as to what amount of business will be done; but it has been my experience for the last ten years that in spite of gloomy predictions and inclement weather conditions, the retailer has usually done better than he expected and every one has been satisfied. The present outlook is certainly not encouraging, to say the least; but neither was Christmas and many florists reported for that occasion an unusually large business. Easter may prove just as big a surprise, and whether or not we must prepare for the best.

From all indications stock will be better than ever before, with an abundant supply of everything, including the elusive lily. According to the New York Evening Journal the latter are to be especially abundant this season; the following notice appeared in the "pink tenth news edition":

"Fine Crop of Easter Lilies.—The news was brought from Bermuda to-day that the Easter lily crop, which failed last year and sent prices soaring, is this year a big success. The work of gathering the buds has begun, and the steamship Bermudian of the Quebec line will bring up on her next trip 10,000 boxes, each containing 125 buds." A million and a quarter lilies ought to "help some"; and if they have already started to gather them, the Bermudians must have the art of "pickling" down to a science, if the buds are to be in condition for Easter. We have still to hear from Japan.

The difficulty of creating novelties for the holiday trade seems to increase with every season. Baskets, pot covers, hampers in all their varying shapes and shades have been done, and done again, until every one is tired of them. There seems to be a general tendency to drift back to nature, and many customers prefer a plain pot, or the simplest kind of basket or pot cover. One of the leading florists' supply men in New York is making a specialty of rustic pot covers and hampers. The only materials being used are birch bark, willow in the green state, and a bark obtained from the far West, which is particularly adaptable to the making of rustic knock-knocks.

Specimen plants form a large percentage of the Easter trade nowadays, possibly because they are found to keep better than made-up pieces, where it is usually necessary to disturb the plants; but in spite of this, combinations of plants in attractive hampers and baskets are always popular with many of our customers. Color effects should be carefully studied in made-up pieces, and great care used in the selection of ribbon, and the color scheme of the basket. Gaudy baskets or hampers should be avoided, as they invariably detract from the plants and general effect, whereas carefully selected shades of ribbon will enhance rather than detract from the general effect. A green basket is always safe, but the shade of green is important; a dark color will give the

Japanese Air Moss in Swan Receptacle.

Japanese Air Moss as a Hanging Plant.

best results. Gilt baskets go very well with most plants, while white is always desirable for Easter. But, I think, the most pleasing effects are obtained with receptacles of the natural woods and various barks.

Made-Up Pieces.

The advantage of made-up pieces is that, while the plants may not be perfect specimens, if they are cleverly arranged and good taste displayed in the selection of the plants used better results may be obtained than with individual or specimen plants. It is not necessary, either, to utilize the most expensive plants for this work, as the clever use of cheaper or imperfect subjects will give just as good results.

The value of mixed ferns such as *Pteris tremula*, *P. cretica albo-lineata*, *P. cretica cristata*, *Adiantum cucullatum*, *A. Farleyense*, *Asparagus plumosus*, and *A. Sprengeri*, have been fully demonstrated, and they are becoming more popular every season; they help wonderfully to fill in bare spaces and to cover up the soil.

A good supply of sphagnum moss is indispensable for hamper work; it acts like a sponge, and will retain the moisture for a long while. Another great advantage is its lightness and cleanliness.

Most up-to-date florists use a metal lining for their hampers and baskets; this saves the baskets and plants and, incidentally, our customers' carpets.

A birch bark box, thirty inches long by ten wide, may be filled as follows: *Erica Cavendishiana* occupies the center, with lily of the valley in clumps on either side, with a fringe of *Nephrolepis Amerophili* around the edge; this may be tied with yellow or dark green ribbon. Low oval baskets are quite popular and make up well; these may be filled with low pink azaleas, dwarf hydrangeas, etc. *Azalea Vervaeckiana* by itself, with *Asparagus Sprengeri* or *plumosus* to fill in with, makes a fine effect. One of the handsomest pieces I have seen this season was a low gilt oval basket filled with the blue hydrangea, with a border of *Adiantum Farleyense* and lily of the valley; a more exquisite combination could not be imagined.

Crimson Rambler roses still hold a prominent place in the Easter business and always prove popular with the stronger sex. These plants are usually sufficient by themselves, but if you have some straggly plants they will look extremely well combined with Easter lilies or tall plants of spirea. The latter also look well with pink azaleas, or the pink Rambler roses.

Violets still retain their popularity; they appear to their best advantage in rustic willow baskets, and if you can obtain the baskets with the catkins still on them, it will add greatly to their appearance.

Gardenia plants are greatly in demand for Easter and some very fine pot plants are grown for this purpose. Several low gardenias planted in a basket, with violets below, tied with broad green ribbon, is very rich.

Flowering oranges will be seen a great deal for Easter, and should prove good sellers; the plants available are good specimens, full of flower, and their fragrance alone should be sufficient to commend them.

The leading stores will find it necessary to have a selection of orchid plants for fastidious customers, who are "tired of everything." Some nice plants of *Cattleya Schroedera*, *C. Trianae*, *Dendrobium Wardianum*, *Oncidium sarcoodes*, and a few other orchids in flower now, make a variety and add an air of superiority to the store.

D. RAYBUN.

SCOTT'S LILIES

Just as good as ever, and plenty of them.

Also a good line of other

Easter Flowering and Decorative Plants

JOHN SCOTT

E. 45th St. and Rutland Road

Flatbush

BROOKLYN, N. Y.

PREPARE FOR EASTER

Have lilies, the best in the land. The best in the land, the best in the land. Azaleas the finest colors to beat the land. To beat the land, to beat the land.

Prof. Walters, Empress of India (double variegated) Apollo (red) and about 4 more varieties. Prices: 60c. 75c. \$1.00 \$1.25 \$1.50 \$1.75 and \$2.00 each. Only large sizes of Bernard Andrew alba, at \$1.00, \$1.25, \$1.50 and \$2.00 each. In 6 in. pots and upward we can only supply Van der Cruyssen Verveneana, Deutsche Perle and Simon Mardner; other varieties 75c. \$1.00 \$1.25 \$1.50 to \$2.00. Easter Lilies, Japan Multiflorum, of our own importation, raised from best 19 in. bulbs obtainable. Have the best for this year we ever had any season; showing buds now, just right for Easter. Medium sizes 12 in. to 30 in., 10c. per bud for plants over five buds, and 12c. per bud for plants under five buds. About 5000 good plants to offer. Owing to fact that demand every year exceeds supply, kindly send order early as possible.

If you would know the fairest sight your eyes can ever see, Where the most perfect plants are grown, to Aachmann come with me; Why, ne'er since flowers began to bloom was such a glorious show. Of all the best that florists need, grand in one place to grow. The lilies are the very best yet seen on Easter Day; Azaleas are whole sheets of flowers, perfect in every way. The araucarias matchless are; so are the ferns all green. With bulbs and plumed spreas, the best you've ever seen. And Aschmann gives a challenge, let every florist bear. For flowers or prices either, no rival does he fear. If you wish to gather dollars, like violets in the Spring. Then send your largest order—his plants the cash will bring.

On account of their being so many diseased bulbs among those obtained from Japan, which have to be thrown out the cultivation of lilies is no longer profitable, therefore we ask our customers to order a reasonable amount of azaleas and other stock when ordering lilies.

Cineraria Hyb. Grandiflora, best improved strain, 5 in. \$2.00 per 100; 6 in., \$3.00-\$1.00-\$5.00 per doz.; right for Easter, in bud, partly in bloom now.

Hyacinths of my own importation, raised from first-class bulbs only. King of the Blues, dark blue; Giant Maitre, lavender blue, Gertrude, pink; La Grandis, white, 4 in. pots, \$12.00 per 100. My hyacinths cannot be compared with those raised from poor, cheap bulbs flooding the market.

Tourneal Tulips. This variety is the best double red and yellow variegated, and sells at sight. It is valuable because it will remain open in good condition for 10 days. Price, 3 bulbs planted in a 4 in. pot, \$1.50 per doz., or \$12.00 per 100 pots.

Von Zion Daffodils. This is the best double yellow narcissus on the market; good seller. 3 double-nosed bulbs planted in a pot, 5, 5 1/2 to 6 in. pots, price, \$2.00, \$2.50 to \$3.00 per dozen pots.

Moon Vines, or the well-known Ipomoea Multiflora, which produces flowers as big as a saucer, free bloomer, very fragrant, and for which I have a reputation as grower and shipper all over the country for the last twenty years, now ready, 2 1/2 in., \$5.00 per 100.

Araucarias Robusta, Compacta and Excolaa. A perfect marvel of nature. We are one of the heaviest importers and growers of this beautiful decorative plant, the Araucaria. Prices: 6-7 in. pots, 6-year-old, 4-5-6 tiers, 28 to 40 in. in height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. high, \$2.00 and \$2.50; 6-7 in. pots, 5-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. Excolaa, 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 75c.; 5 1/2 in. pots, 3 to 4 tiers, 8-10-14 in. high, 50c. each.

Ferns. Raised in pots, not lifted from benches. Nephrolepis Scottii, 6 in. pots, 50c. to 75c.; 7 in. pots, \$1.00 each. Nephrolepis Piersoni, 5-5 1/2-6 in. pots, 35c. 40c., 50c.

Nephrolepis Bostoniensis, 8 in. pots, made up of three plants as big as a wash tub, \$1.25 to \$1.50; 7 in. pots, 75c. to \$1.00; 6 in. pots, 50c.; 5 to 5 1/2 in. pots, 30c., 35c., 40c.

Nephrolepis Whitmani, 8 in. pots as big as a wash tub, \$1.25 to \$1.50; 6 in., 50c. to 75c.; 4 in., 25c.

Ferns for Dishes, 3 in. pots, 7c. each. Amerpohli, the new lace fern, 5 1/2 in. pots, 50c. and 60c.

Kentia Forsteriana and Belmoreana, 4 in. pots, 8 to 20 in. high, 35c. to \$1.00; 5 1/2 in. and 6 in. pots, bushy, stocky plants, 50c., 60c. and 75c.

Lantana Borbonica, 5 in., 30c. Cocos Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

Ficus Elastica or Rubber Plants, home grown and Belgium stock, 18-20 to 40 in., 5-5 1/2 to 6 in. pots, 35c., 40c., 50c., 60c.; each; 7 in. pots, 75c.

Begonia Flambeau, sells at sight, 5 1/2 in. pots, 25c. Begonia, new improved Erfordi, 4 in. strong, 20c.; 5 1/2 in., 25c. each.

Primula obconica, in bloom, 5 1/2 in. pots, 25c. each. Cyclamen giganteum, in bud and bloom, 4 in. pots, 20c. to 25c. each.

Hydrangea Otakaa. This is the best pink variety, already in bud, just right for Easter, 4 to 7 in. pots, 25c., 50c., 75c., \$1.00 each.

Spiraea Gladstone. We offer only large stock. Our own importation, 6-7 in. pots, in bud now, just right for Easter, 50c. to 75c. each.

To save express charges, please mention if plants are to be shipped in or out of pots. Cash with order, please. Strictly no references can be investigated in such busy shipping seasons.

An immense stock of choice Easter Plants, blooming Easter week or earlier if desired, are now ready for immediate shipment.

Never mind about that nonsense hard time talk. Everybody wants plants for Easter. Wake up; open your eyes; success sure to come. Come and see our activity in shipping azaleas and other plants. Will you follow? Now is the time to order while our stock is large. All get served alike—the man who comes right here to the spot or the party who buys by mail. Don't forget, we have the best Azaleas and Lilies this year in the market, and no joke about it. Our reputation for Atlantic to Pacific in shipping Easter plants for the wholesale market the last twenty years is sufficient ground that we mean business, and have what we advertise.

Have Azalea indica to beat the hand. We take the lead in the American market for them. We never so nice as this year—good foliage well budded. We make a specialty of importing every year an immense stock of the choicest varieties, popular in America, grown under contract for us by an azalea specialist in Ghent, Belgium. If you need azaleas, do not look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable for the American market, in medium sizes, full of buds, in good healthy condition, right for Easter.

All our azaleas are planted in 6 and 7 in. pots as soon as they arrive in October from Belgium. In justice to all our azalea buyers, we do not sell any in the Fall (having the best picked out for Fall trade), but keep them all for Christmas and Easter orders. We have a whole house full of Mme. Van der Cruyssen (best double pink) that makes you mouth water, all as round as an apple, covered with buds, 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 and \$2.00 each. Next we have Simon Mardner (double pink), Vervaneana (rose variegated double), Deutsche Perle (white), Niobe (double white), Bernard Andrew alba (double white).

All goods must travel at purchaser's risk plants are to be shipped in or out of pots. Cash with order, please. Strictly no references can be investigated in such busy shipping seasons.

Prices Advertised in these Columns are for

THE FLORISTS' EXCHANGE

Easter Baskets.

In the making of baskets of flowers for Easter the chief aim of the florist should be simplicity of arrangement, combined with strict harmony in shades of color. The man who can give the true harmony of shading along with the free setting of the flowers is an artist. Of course, the predominating colors for Easter work are of the white shades, but they may be very properly combined with soft pink and deeper shades of such high-class flowers as cattleyas or other orchids. I have too often seen what would otherwise have been artistic designs spoiled by too many flowers being used and crowded so much together that no individuality was shown. It should be the aim of the florist to place every flower so that it will have a distinctiveness of its own. The accompanying illustrations from designs by Edward MacMulkim, Boston, Mass., show a simplicity of arrangement with so pleasing harmony of colors that stamps them at once as artistic and elegant.

No. 1.—The Easter Egg, half open. This design is practically all white and is tied with white ribbon at the top. The flowers are Roman hyacinths, about two dozen sprays being used, with a little stevia intermixed to give a greenish effect in order to harmonize with the Asparagus Sprengeri, which is freely used. [Note.—As stevia will not be available, a few spikes of mignonette, or sprays of eupatorium, may be substituted without marring the effect.]

No. 5 is a design of basket as the No. 4 design, although the flowers are of much more choice. About half a dozen white lilies are used together with about a dozen white lily of the valley and a few cattleyas. The ribbon used in this instance are of that soft pink which harmonize with the petals of the cattleyas.

No. 6 is an artistic little square basket opening at one corner; the flowers used are four cattleyas with a few sprays of Roman hyacinths and Asparagus plumosus. The handle of this basket, which is rather high, with square corners, is tied with delicate pink and white and pink ribbons.

No. 2 is a design which may not appeal to many, yet if this sort of design is artistically made there is a select trade which will call for it and it will be found very remunerative to the florist. The main part of the basket is filled with select fruit including apples, oranges, pears, figs, Muscat or other white and Black Hamburg grapes. A dozen white roses are used in this design, the handle of the basket being artistically tied with ribbon and artificial sprays of statice and wistaria to give a little coloring effect.

No. 4 This is a simple design, indeed, yet is it not elegant? It is a small basket containing a dozen and a half La Reine tulips, with a few sprays of stevia and asparagus. Nothing is put on the handle of this basket but the ribbon bows, which have a little green coloring in them to give effect. In place of the stevia, lily of the valley may be used with equally good results.

No. 3. This is a medium-sized basket containing extra choice flowers, white lilac, with a few sprays of stevia being used as the groundwork. Six or eight cattleyas, with their delicate pink color, are very imposing among the dozen and a half cypripediums used to give the peculiar greenish hue; a few La Reine tulips soften out the effect of the deeper-colored cattleyas. The handle is tied with soft pink and white ribbons, and a few artificial sprays of wistaria and green. No green is used in the basket except the foliage of the lilacs and tulips. Mignonette may be substituted for stevia and will produce an equally charming effect.

It will be seen that these baskets described contain comparatively few flowers yet they are neat and artistic, and so pleasing to the eye that they may at once be a charm to deliver to some friend in remembrance of Easter morning.

J. W. DUNCAN.

Japanese Air Moss.

The A. L. Randall Company, 19-21 Randolph street, Chicago, is handling large quantities of Japanese air moss, a pretty green fern-like moss which has been prepared for long keeping. The moss is used by retailers

very largely for filling vases, flower bowls, bric-a-brac, and other odds and ends entering into florists' window and store decoration. The company is exhibiting in its showrooms a fine line of small fancy baskets, swan bowls, and other pieces especially adapted for use with the moss.

D. F. Simonds.

D. F. Simonds.

D. F. Simonds, a Chicago florist, senior member of the Ogden Floral Company, was born in Buffalo, N. Y., November 12, 1848, and is accordingly now in his sixtieth year. He entered the florist business at the early age of eight years, at a two dollars a month consideration, which was gradually increased to four times that amount. In the early sixties, at the age of fourteen he enlisted as a drummer boy in the Seventy-fourth Regiment, N. Y. S. Infantry. In 1869 he drifted into Chicago as a deck hand on the old steamer Pittsburg, and shortly afterward entered the employ of the late Justice Calvin De Wolf as a gardener, later going into the theatrical business and acting as advertising agent for Powers' theater and subsequently traveled with several combinations, including Collier's, Bailey's, Annie Pixley's and Maggie Mitchell's. In 1892-3 during the World's Fair in Chicago he had charge of the decorations on the Wooded Island and of the State buildings. After a few years in politics he re-entered the florist business at 848 Harrison street under the firm name of the Ogden Floral Company, where he has built up a successful business.

Mr. Simonds is prominent in fraternal organizations being a member of Lodge No. 643 Corinthian Chapter R. A. M., No. 69 Columbia Commandery, No. 63 K. T., Tyrian Council, No. 78 R. and S. M.

Aryan Grotto No. 18 M. O. V. P. E. R. Illinois Masonic Veterans' Association, Order of Owls, Medina Temple, A. A. O. U. M. S. Mystic Shrine, Red Men, Chicago Lodge of Elks, and several other orders.

The accompanying beautiful Mystic Shrine design was recently made by Mr. Simonds's firm.

A Popular Boston Flower Store.

The store of Henry Penn on Bromfield street, Boston, Mass., is one of the most popular in the downtown district. It is now seven years since Mr. Penn established himself at the present location having previously been located on Province street for a number of years. Last Fall Mr. Penn had his store thoroughly overhauled and improved so that the interior decorations and facilities are up-to-date in every way. It is not in the store alone, however, that this florist believes in keeping up with the times, but his delivery wagons speak for themselves, as the one herewith illustrated will show. The establishment at all times is a place of activity, a first-class trade being enjoyed both in Boston and in the surrounding district.

There are two brothers, Henry and William, and they are popular in the trade. They are both members of the Gardeners and Florists' Club and are ever ready to contribute to its welfare.

J. W. DUNCAN.

Planting and Care of Geranium Beds.

(Read before the Grand Rapids Florists and Gardeners' Club by N. B. Storcr.)

The geranium still leads all other plants for bedding. Its period of blooming is from early Spring until the snow flies, and no other variety of plant will stand so much abuse and still grow and send up large clusters of flowers, bidding defiance to their neglected treatment. On the other hand, if in a good location, in a moderately good soil and given fair treatment, geraniums will respond with the greatest profusion of handsome trusses the entire Summer.

There are a great many varieties at the present time which are all splendid bedders. The old single sorts, which were used so successfully from 15 to 25 years ago, such as General Grant, Queen of the West, Rev. Atkinson and General Sheridan, have been superseded by such grand varieties as S. A. Nutt, introduced by the veteran florist, John Thorpe, at Cleveland, O., about 1878; Alphonse Ricard, John Doyle, Marquis de Castellane, Beaute de Poitevine, Jas. Vick, Frances Perkins, Pink Bedder, Double General Grant, and many others.

The first thing to be considered for a geranium bed is the location, which should be the brightest and sunniest spot available. Many times I have been called upon to plant a bed of geraniums, and on arrival found that no preparation whatever had been made to receive the plants; and I will say right here that everyone contemplating setting out any variety of plant should have everything in readiness, beds all spaded and raked a little higher in the center so as to drain off all surplus water; that the plants can be put at once. It is the duty of the florist who is to do the planting to first see that a proper location has been selected and prepared to receive them, for in the height of the bedding season time counts.

Mystic Shrine Design.

Artists, Ogden Floral Co., Chicago.

In cities where a large amount of bedding is done, it is a very good plan to send a man around beforehand to see that the beds are spaded and raked ready to receive the plants.

After the location has been decided upon the next thing to be considered is the soil, which should be a good clay loam and not too rich; say about one-sixth good well-rotted stable manure. If the soil is too rich it will induce a long, spindly growth, and very few flowers; while, on the other hand, with short stocky growth, they will bloom more profusely. As the main object in view is flowers, everything should be done to make these and not growth, and the proper way to do this is to keep the plants at all times a little on the dry side. Never let any water get on the flowers, if possible to avoid it. Watering is one of the most essential things in properly caring for geraniums. As a rule, almost everyone seems to think that in order to get flowers, the plants must be soaked every day; but such is not the case. One or two good waterings a week will be sufficient to induce the plants to throw up flowers instead of long, lanky growth.

If the foregoing brief cultural directions are carried out, the plants will remain healthy and give a profusion of flowers the entire season.

Delivery Wagon of Penn, Boston Florist.

Interior of Store of Penn, Boston Florist.

THE NEW LIGHT PINK CARNATION MAY

You will find in this variety one which you will want to grow in large quantity after you give it a trial. It is one of the few varieties which come in early and keep continually at it until transplanting time. The color is better than Enchantress and the bloom is better than Fair Maid and it is freer than either of them.

We are now sending out fine, strong, well-rooted cuttings. Let's have your order now. \$12.00 per 100; \$100.00 per 1000.

Also other new and standard sorts. All the best varieties at current prices. Our stock is in prime condition.

NEW CRIMSON CARNATION HARVARD

The color is a very rich crimson. The habit is free and continuous, every shoot producing a flower. Blooms borne on long, wiry stems from 24 to 35 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.
New Carnation FAUST (Brilliant Scarlet) This novelty very fine for Christmas duty, all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.
 Mr. J. D. COCKCROFT, Northport, N. Y.
 NEW YORK, January 16th, 1908.
 Dear Sir:—We desire to congratulate you on the two varieties of Carnations, GEORGIA, and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50 per cent to 100 per cent, more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain, Yours truly,
TRAENBLY & SCHENCK, Wholesale Florists

REVIEW OF THE MARKET

NEW YORK.—The cut flower market seemed to experience a little spurt on Saturday last, and it was thought perhaps that the dull season was at an end. With Monday came a nasty, rainy day, yet stock cleared out better than has been usual; but Tuesday morning the old conditions returned, and it was practically impossible to clear out stock without making a great sacrifice in the prices. American Beauty, Bride and Bridesmaid roses are all more than plentiful enough for what demand there is, and slips of the teas are cleared out at 1½c. or 2c. each, whenever a speculator can be persuaded to handle the stock in bulk. Special American Beauty are sold at any price from 10c. to 20c. each, an occasional small lot bringing \$3 per dozen, but these sales are few and far between compared with the amount of stock that reaches the city every day. Carnations, perhaps, are not quite so plentiful, and early in the week a little better average was realized, \$3 per 100 being asked for some of the good varieties. A fair supply of Cattleya Mossiae is coming into the market, realizing anywhere from 40c. to 60c. each, according to quality. Gardenias are in heavier supply, but do not clear out satisfactorily.

There are plenty of lilies coming in, and of these there are several grades, so that there is a long range in the prices asked. Lily of the valley has been almost a glut at times, and much good stock has been cleared out at \$1 per 100. Bulbous flowers are suffering from the competition caused by the Southern crop, and prices are anything but firm. Violets do not seem to be handled any more by the good stores; the only customers who seem willing to deal in these flowers are the street merchants, which means that the bulk of the supply goes at anywhere from \$1.50 to \$2 per 1000.

CHICAGO.—While there is some improvement noted in the market it is not strong in character, the demand at best being intermittent, one day good and the next poor. The carnation situation is very much better, and prices again show some basis. There is an absence of sacrificial deals, and a dollar a hundred appears to be the minimum. Arrivals are much lighter than a week ago, and movement is fairly satisfactory within the range of prices. The continued dwindling of the supply augurs for a rather short crop for Easter. Roses are moving somewhat better, but short stock drags considerably; long-stemmed American Beauty are arriving in plenty, and the stock must be especially fine to bring maximum prices. Consignments of bulbous stock are not quite so heavy, consequently there is a better movement, but without increased prices. Outdoor grown stock is coming in in large quantities, and interferes very much with the disposal of the forced products. Single violets are not so plentiful, but doubles more than offset the shortage, so there is little opportunity for prices to soar. Lilies continue abundant and cheap. Asparagus in the two varieties, is in good demand, and moves lively. Adiantum is in somewhat short supply, and the market could take considerably more. J. H. P.

INDIANAPOLIS, IND.—Relief has arrived from the heavy cut of flowers at this time in a generous allowance of funeral work and decorating. Counter trade is also improving. Much stock goes to waste, of course, as the production is far too great for even prosperous times.

Prices on bulbous stock are away below what they should be. Carnations are harvested by the thousands and wholesaled at \$1.50 to \$3 per hundred. Violets are not blooming so profusely, they sell at 40c. to 75c. per hundred. Callas and Hybrid lilies in great vases indicate that Easter is but a short way off. Roses are not all taken by the local store men and many are shipped. Kaiserin Augusta Victoria, Richmond and Killarney are the best selling sorts at present. Select Bride and Bridesmaid are offered at \$1 to \$5 per hundred. American Beauty are improving in quality at \$5 to \$35 per hundred. The local supply of sweet peas is generally taken up at 50c. per hundred; it is an indisputable fact that these flowers are quoted at the same price in the large cities and are often charged

for at the rate of \$1.50 to out-of-town trade. Violets are quoted at 40c. per hundred for the best quality but 75c. to 80c. is requested from those at a distance. No doubt remains but that the out-of-town trade is the only salvation for the big cities at this season.

Fancy rhododendrons, azaleas, hydrangeas, lilacs and cinerarias tempt many to select plants when ordering. The hail storm has been the chief topic at Tomlinson Hall market last week; many of the growers are unable to attend because of their losses. The remainder report a very fair business. I. B.

ST. LOUIS.—The past week has brought a decided change in both retail and wholesale circles. While there is still plenty of first-class stock in the market, there is no actual glut as there was two weeks previous. Prices, too, have gone up a little on the first grade. From reports by most of the retailers, last week was surprisingly good in funeral work and trade in blooming plants. Violets are going to the had and will be all over by Easter. Carnations and roses are coming in fine, but are not nearly so numerous as two weeks ago. Fancy blooms are again up to \$3, firsts to \$2 and common grades to \$1 per 100. Roses sell at from \$2 to \$6 per 100; American Beauty, \$3 per dozen for long fancy. There are plenty of short grades at cheap prices. Bulbous stock is pretty well cut out; still, plenty is in the market. Asparagus and smilax are selling well; other greens are in plenty. ST. PATRICK.

BOSTON.—Business has improved somewhat over the conditions of the past few weeks. Prices have not stiffened a great deal. Some excellent flowers are now on the market. The grades of American Beauty, Richmond and Killarney roses are exceedingly fine. Carnations are selling fairly well. Bulbous stock is plentiful and cheap; the good prices of last year have not been equaled this season. Lilies are plentiful enough, the demand as yet not being heavy. Lily of the valley has been bringing better prices. Violets have been very abundant but have sold well. Sweet peas are moving briskly. Marguerites and other flowers of which a limited quantity daily appears sell fairly well. J. W. D.
